THE MEXICAN HEALTH AND AGING STUDY

(MHAS/ENASEM)

MHAS Created Variables

Project Document
Version 2
July 6, 2023

The MHAS (Mexican Health and Aging Study) is partly sponsored by the National Institutes of Health/National Institute on Aging (grant number NIH R01AG018016) in the United States and the Instituto Nacional de Estadística y Geografía (INEGI) in Mexico. Data files and documentation are public use and available at www.MHASweb.org.

I. Study Description

The Mexican Health and Aging Study (MHAS or ENASEM in Spanish) is a national longitudinal study of adults over the age of 50 with a broad socioeconomic perspective, with six waves completed between 2001 and 2021. The study protocols and survey instruments are highly comparable to the U.S. Health and Retirement Study (HRS). The MHAS 2001 baseline survey is a nationally representative survey of individuals born in 1951 or earlier, that is, the population aged 50 or older as of the year 2001. The MHAS is designed to examine the aging process and evaluate the impact of disease on health, function, and mortality of adults over the age of 50 that resided in Mexico.

The MHAS baseline sample was selected from residents of both rural and urban areas, from the National Employment Survey (*Encuesta Nacional de Empleo*, ENE), carried out by the INEGI (*Instituto Nacional de Estadística y Geografía*) in Mexico. Households with at least one resident age 50 or older were eligible to be part of the MHAS baseline sample. If more than one person was age-eligible in the selected households, then one person was selected at random for the study. If the selected MHAS person was married or in a civil union, with the spouse residing in the same household, then the spouse or partner was also recruited to be part of the MHAS regardless of his/her age.

The sample is distributed in all 32 states of Mexico and has representation at the national and rural/urban areas. The baseline survey was completed with high response rates (91.8%) in 2001 with a follow-up survey in 2003 (93.3% follow-up response rate). Starting in 2003, the follow-up survey protocol included an instrument for a next-of-kin interview on deceased subjects. In 2012, a follow-up visit was planned to include all the age-eligible subjects from the 2001 and 2003 surveys and a new sample of individuals from the 1952-1962 birth cohorts as well as their spouses/partners regardless of age (MHAS, 2013). The 2012 survey response rate was 88.1% (including the follow-up sample). Another follow-up survey was successfully fielded in 2015, three years after the third wave, with high response and follow-up rates (88.3%). A fifth wave of data was also collected in 2018 with a follow-up survey in 2021. Similar to the MHAS 2012 protocol, in 2018 a new cohort was added of representative adults born between 1963-1968. The survey response rate was 84.7% and 91.5%, in 2018 and 2021 respectively. The table below includes the sample size by type of interview for each wave of the study from 2001 to 2021.

Table 1. Mexican Health and Aging Study (MHAS) Sample Size Across Waves

	2001	2003	2012	2015	2018	2021
Total Sample	**15,186**	**14,250**	**18,465**	**15,988**	**18,249**	**17,538**
Direct and Proxy Interviews	15,186	13,704	15,723	14,779	17,114	15,739
Direct Interviews	14,370	12,526	14,448	13,850	15,786	14,484
Proxy Interviews	1,032	1,178	1,275	929	1,328	1,255
Next-of-Kin Interviews	-	546	2,742	1,209	1,135	1,799

The MHAS group focuses in creating user-friendly data sets with the main goal of disseminating and increasing the use of the data among researchers (in particular junior researchers) across the 5 waves of the study. With this in mind, the MHAS group has selected a group of variables of interest to make the study data more accessible.

The objectives of the current MHAS document are:

- To provide the companion descriptive document for the new data product "MHAS Created Variables".
- To provide access to a collection of flowcharts that describe the process to construct each variable included in the final data files.
- To distribute the STATA program codes used for the constructed variables (as listed in Section II.
- To provide access to the corresponding Codebooks.

II. Created Data File Structure and Contents

The "MHAS Created Variables" is a set of data files for each wave of the study, from 2001 to 2021. Each of these data files has a wide format, with the unit of observation the individual subject. The naming of the variables is consistent across waves to facilitate the comparison. In addition, each data set includes the necessary identifiers to be able to complete a merge with all the other created data files as well as with the raw data across and within waves. For more information about how to merge data files in the MHAS, please refer to our tutorial available here.

In **Appendix 1**, we include a table with the data files contents, number of observations, and number of variables in each data file. Each column represents a wave of the study. As described in the table, all the

variables included in these data files have the same name across waves and include at the end two digits that represent the year of the study; for example, variable `salud_glob_01` indicates the self-reported health and the last two digits refer to the 2001 wave. Also, "NA" indicates if a variable is not included because information was not available at said wave.

The overall content of the data files is grouped as follows:

- Household and Person IDs
- Type of Interview, Sample Cohort, and Weights
- Demographic Information
- Self-Reported Health Status
- Activities of Daily Living and Instrumental Activities of Daily Living
- Depression symptoms
- Health and Lifestyle Behaviors
- Preventive Care
- Sleep
- Health Case Use
- Psychosocial Measures
- Use of Time
- Life Satisfaction
- Loneliness
- Occupation
- Self-reported Memory

Finally, the "MHAS Created Variables" data files in STATA include variable labels and value labels in both English and Spanish. Is it important to note that this feature is only available when using STATA. To change the language of the labels in STATA, the user can use the following codes:

- To use the labels in Spanish

```
label language es
```

- To use the labels in English

```
label language en
```

For more information about `label language`, please refer to the STATA manual (https://www.stata.com/manuals/dlabellanguage.pdf)

III. Codebooks

Appendix 2 contains the "MHAS Created Variables" codebooks by wave. The created variables incorporate the use of special missing values to indicate the reason for the missing information. The primary reasons include interviews by proxy, refusals, and not valid values. It is important to note that special missing values are available for STATA and SAS users only but are NOT visible in SPSS.

The following is a list of special missing values used to explain missingness in the raw variables:

".p" Interview was complete by a proxy respondent (question not asked as part of proxy interviews)

".r" Subject refused to answer the question

".d" Subject answered "Don't Know"

".s" Skipped question due to a previous answer or set of answers

".i" Incomplete interview, subject interrupted interview and did not continue

".m" Missing information, subject did not complete the question but did complete the rest of the interview

".x" Subject answered "Don't Do", this only applies for the ADLs and IADLs questions

In addition to the Codebooks, we created a series of flowcharts to show the process of constructing the variables (available in Appendix 3).

IV. Flowcharts for the construction of variables

In addition to the codebooks, we also we created a series of flowcharts to illustrate the process of constructing all variable included in the data files. The main goal of this supporting material is to indicate how different values are treated to construct the data. In particular how to handle missing values as well as "Don't Know" or "Refused (to answer)" values. In some cases, to construct a variable we had to also considered the responses from previous waves; this is also included in said flowcharts. Finally, the flowcharts show how special missing values (as described in the codebook section) were assigned. Flowcharts were created to illustrate the process using the MHAS 2021 variables and are available in **Appendix 3**. They can be used as an example for the previous waves.

Appendix 1. MHAS Created Variables Content by Wave

Variable Description		Variable Name	2021	2018	2015	2012	2003	2001
English	Spanish

Total number of observations			**15,739**	**15,186**	**14,250**	**15,723**	**14,779**	**17,114**
Total number of variables			119	108	106	100	80	76

Appendix 2. MHAS Created Variables Codebook by Wave

The following is a list of the different special missing values assigned within the individual level sections:

Special Missing	Label	Description
".p"	Proxy Interview	Interview was complete by a proxy respondent (question not asked as part of proxy interviews)
".r"	Refused	Subject refused to answer the question
".d"	Refused	Subject answered "Don't Know"
".s"	Skipped	Skipped question due to a previous answer or set of answers
".i"	Incomplete	Incomplete interview, subject interrupted interview and did not continue
".m"	Incomplete	Missing information, subject did not complete the question but did complete the rest of the interview
".x"	Doesn't do	Subject answered "Don't Do", this only applies for the ADLs and IADLs questions

2021

cunicah — Unique Household ID (=unhhid) / Clave Única del Hogar (=unhhid)

Not tabulated

np — Person Number / Número de Persona

Appendix 3. Flowcharts for the construction of variables using MHAS 2021

Flowcharts for the Construction of Created Variables using the MHAS 2021

Diagramas de Flujo para la Construcción de Variables Creadas usando el ENASEM 2021

Variables from Individual Level Sections

Variables de Secciones a Nivel Individual

Mexican Health & Aging Study

Estudio Nacional de Salud y Envejecimiento en México

Table of Contents

Construction of genero from raw data....6
Construction of edad_gru_21 from edad_21....7
Construction of variable indicating whether or not subject lives in large urban area from raw data....8
Construction of number of years of education from raw variables....9
Construction of groups from the number of years of education....10
Construction of marital status from raw data....11
Construction of n_uniones_21 from raw data....12
Construction of categorical variable indicating number of unions from numeric variable of number of living children....13
Construction of variable of number of living children from raw data....14
Construction of categorical variable indicating number of living children from numeric variable of number of living children....15
Construction of migracion_21 from raw data....16
Construction of global self-reported health from raw data....17
Construction of variable indicating difficulty getting dressed from raw data....18
Construction of variables indicating difficulties with activities of daily living (ADL), other than dressing from raw data....19
Construction of groups of ADLs from the number of difficulties with ADLs....20
Construction of number of difficulties with ADLs from raw data & created variables....21
Construction of variables indicating difficulty with instrumental activities of daily living (IADL) variables from raw data....22
Construction of number of IADLs from raw data & created variables....23
Construction of groups of IADLs from the number of limitations with IADLs....24
Construction of variables for depressive symptoms from raw data....25
Construction of variables for individual depressive symptoms from raw data....26
Construction of variables for various chronic & acute conditions raw data....27
Construction of numeric variable indicating number of chronic and acute conditions from raw data....28
Construction of Body Mass Index categorical variable from raw data....29
Construction of physical activity 3 or more times per week from raw data....30
Construction of variable indicating if respondent currently drink alcohol from raw data....31
Construction of variable indicating if respondent currently smokes from raw data....32
Construction of variables indicating whether each respondent underwent several preventative care measures that apply to any sex in the past two years....33
Construction of variables indicating preventative care measures specific for women from raw data....34
Construction of variables indicating preventative care measures specific for men from raw data....35
Construction of variable indicating if respondent has trouble falling asleep from raw data....36
Construction of variable indicating if respondent has trouble falling asleep from raw data....37
Construction of health services variables from raw data....38
Construction of variables indicating whether each subject is covered by various types of health insurance....39

Table of Contents (cont.)

Construction of seguro_medico_21 from raw data....40
Construction of variable indicating whom respondent perceives as having more weight in family decisions; themselves, their spouse, or about equal weight between the two....41
Construction of variable indicating how much weight respondent believes that they have in making personal decisions from raw data....42
Construction of variable indicating respondents' preference regarding making medical decisions from raw data....43
Construction of variables indicating how respondent uses their time in different daily activities from raw data....44
Construction of life satisfaction variables from raw data....45
Construction of variables on the loneliness scale from raw data....46
Construction of variable indicating labor activity from raw data....47
Construction of variable indicating respondents self-reported quality of memory from raw data....48
Construction of variable indicating if respondents have been told they have had COVID-19 from raw data....49
Construction of variable indicating if respondents have limitation due to COVID-19 from raw data....50
Construction of variable indicating the respondents level of stress related to the COVID-19 pandemic from raw data....51
Construction of variable indicating if any of the respondent's children died between 2018 and 2021 due to COVID-19 from raw data....52
Construction of variable indicating if the respondent took care of a family member between 2018 and 2021 due to COVID-19 from raw data....53
Construction of variable indicating if the respondent had a financial loss between 2018 and 2021 due to COVID-19 from raw data....54
Construction of variable indicating if the respondent consulted a doctor or medical personnel because of COVID-19 from raw data....55
Construction of variable indicating if the respondent was hospitalized because of COVID-19 from raw data....56

Tabla de Contenido

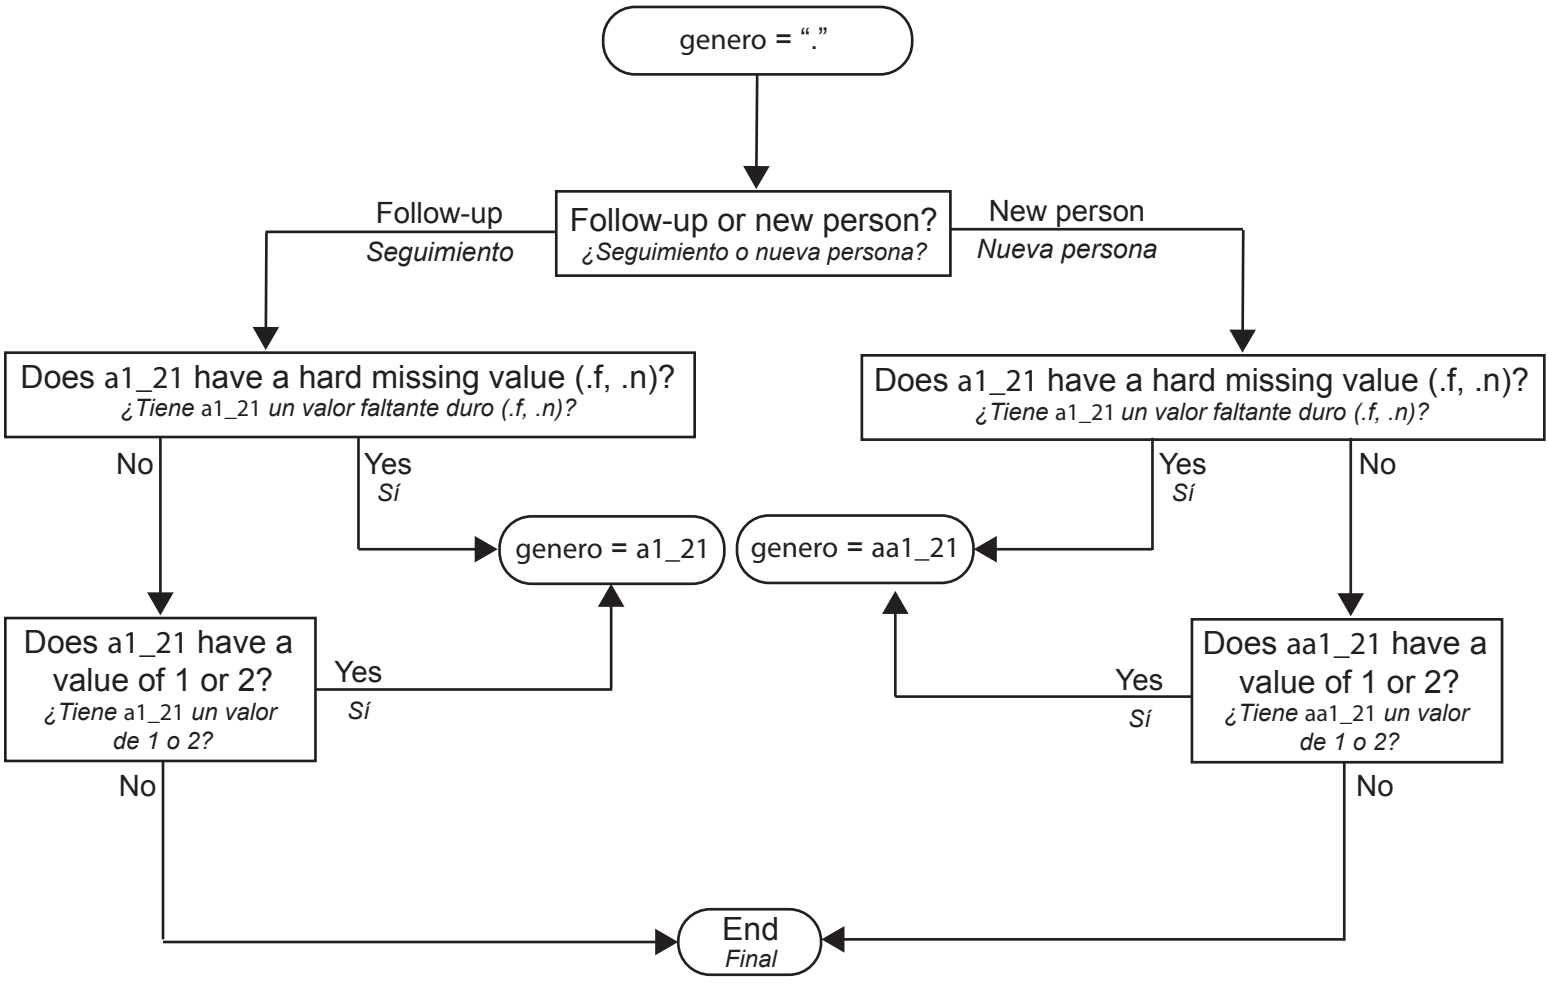
Construcción de genero a partir de variables brutas....6
Construcción de edad_gru_21 a partir de edad_21....7
Construcción de variable que indica si las vidas de los sujetos en grandes áreas urbanas son a partir de variables brutas....8
Construcción de número de años de educación a partir de variables brutas....9
Construcción de la agrupación (edu_gru) a partir del numero de años de educacion....10
Construcción del estrado conyugal a partir de variables brutas....11
Construcción de n_uniones_21 a partir de variables en bruto....12
Construcción de una variable categórica que indica el número de hijos vivos a partir de la variable numérica del número de hijos vivos....13
Construcción de variable de número de niños vivos a partir de variables brutas....14
Construcción de una variable categórica que indica el número de hijos vivos a partir de la variable numérica del número de hijos vivos....15
Construcción de migration_21 a partir de variables brutas....16
Construcción de salud general autodeclarada a partir de variables brutas....17
Construcción de variable que indican dificultad para vestirse a partir de variables brutas....18
Construcción de variables que indicar limitacion con actividades de la vida diaria (ABVD) distintas vestirse a partir de variables brutas....19
Construcción de la agrupación de ABVDs a partir del numero de limitaciones con ABVSs....20
Construcción de numero de ABVD a partir variables brutas y creadas....21
Construcción de variables que indican dificultad con actividades instrumentales de la vida diaria (AIVD) a partir de variables brutas....22
Construcción de numero de AIVDs a partir de variables brutas y creadas....23
Construcción de la agrupación AIVDs a partir de numero de limitaciones con AIVDs....24
Construcción de variables para cada síntoma depresivo a partir de variables brutas....25
Construcción de variables de síntomas depresivos individuales a partir de variables brutas....26
Construcción de variables para diversas condiciones crónicas y agudas a partir de variables brutas....27
Construcción de variables categóricas que indican el número de afecciones crónicas y agudas a partir de variables brutas....28
Construcción de variable categorica de Indice de Masa Corporal a partir de variables brutas....29
Construcción de actividad fisica 3 o mas veces por semana a partir de variables brutas....30
Construcción de variable que indica si el individuo actualmente consume bebidas alcoholicas a partir de variables brutas....31
Construcción de variable que indica si el individuo actualmente fume a partir de variables brutas....32
Construcción de variables que indican si cada individuo se sometió a varios medidas de cuidado preventivo que se aplican a cualquier sexo en los últimos dos años....33
Construcción de variables que indican medidas de cuidado preventivo especifico para mujeres a partir de variables brutas....34
Construcción de variable que indican medidas de cuidado preventivo especifica para hombres a partir de variables brutas....35
Construcción de variable que indica si el individuo tiene dificultad para quedarse dormido a partir de variables brutas....36
Construcción de variable que indica si el individuo tiene dificultad para quedarse dormido a partir de variables brutas....37
Construcción de variables de servicios de salud a partir de variables brutas....38
Construcción de variables que indican si cada sujeto está cubierto por varios tipos de seguro de salud.39

Tabla de Contenido

Construcción de seguro_medico_21 a partir de variables brutas....40
Construcción de variables que indiquen quién percibe el encuestado como que tiene más peso en las decisiones familiares; ellos mismos, su cónyuge, o aproximadamente el mismo peso entre los dos....41
Construcción de variable que indica cuánto peso cree el encuestado que tiene al tomar decisiones personales a partir de variables brutas....42
Construcción de una variable que indica la preferencia de los encuestados con respecto a la toma de decisiones médicas a partir de variables brutas....43
Construcción de variables que indican cómo el encuestado usa su tiempo en diferentes actividades diarias a partir de variables brutas....44
Construcción de variables de satisfacción con la vida a partir de variables brutas....45
Construcción de variables sobre sentimientos de la escala de soledad a partir de variables brutas....46
Construcción de variable que indica la actividad laboral a partir de variables brutas....47
Construcción de variables que indican la calidad de memoria autoinformada de los encuestados a partir de variables brutas....48
Construcción de variables que indican si le han dicho al encuestado si ha tenido COVID-19 a partir de variables brutas....49
Construcción de variables que indican si el encuestado tiene limitaciones debido a COVID-19 a partir de variables brutas....50
Construcción de variables que indican si el nivel de estres del encuestado con relación a la pandemia de COVID-19 a partir de variables brutas....51
Construcción de variable que indica si alguno de los hijos del encuestado falleció entre 2018 y 2021 debido a COVID-19 a partir de variables brutas....52
Construcción de variable que indica si el encuestado cuidó a algun familiar entre 2018 y 2021 debido a COVID-19 a partir de variables brutas....53
Construcción de variable que indica si el encuestado sufrió alguna perdida financiera entre 2018 y 2021 debido a COVID-19 a partir de variables brutas....54
Construcción de variable que indica si el encuestado consultó un doctor o personal medico debido a COVID-19 a partir de variables brutas....55
Construcción de variable que indica si el encuestado fue hospitalizado debido a COVID-19 a partir de variables brutas....56

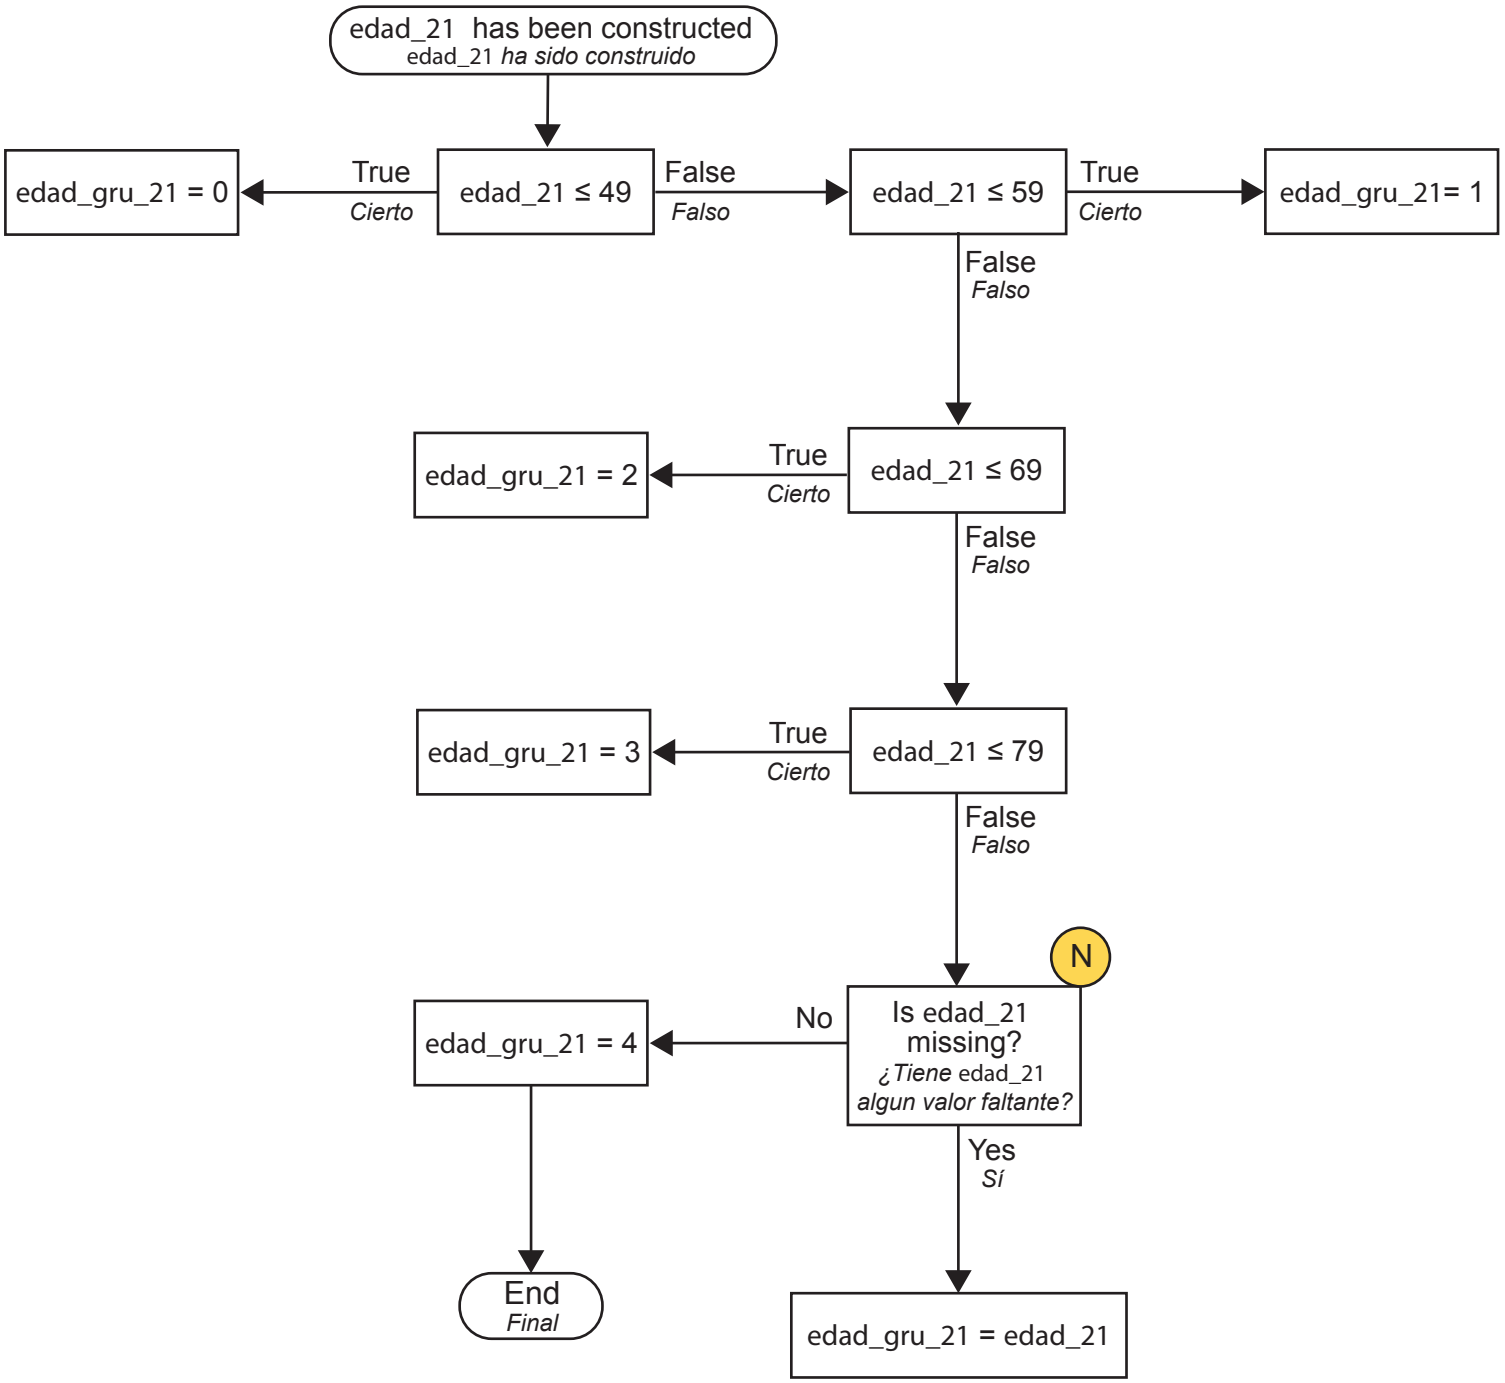
1. Construction of genero from raw data

Construcción de genero *a partir de variables brutas*



3. Construction of edad_gru_21 from edad_21

Construcción de edad_gru_21 *a partir de* edad_21



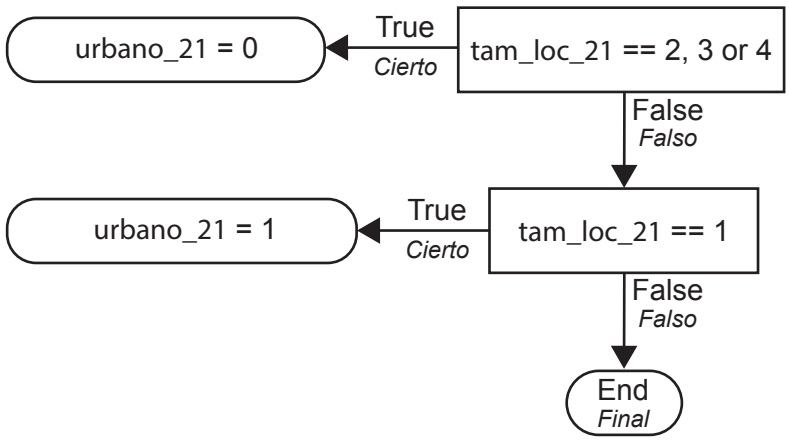
N

If edad_21 is not missing at this juncture, then respondent must be known to be 80+ years old.

Si edad_21 no falta en esta coyuntura, se debe saber que el encuestado tiene más de 80 años.

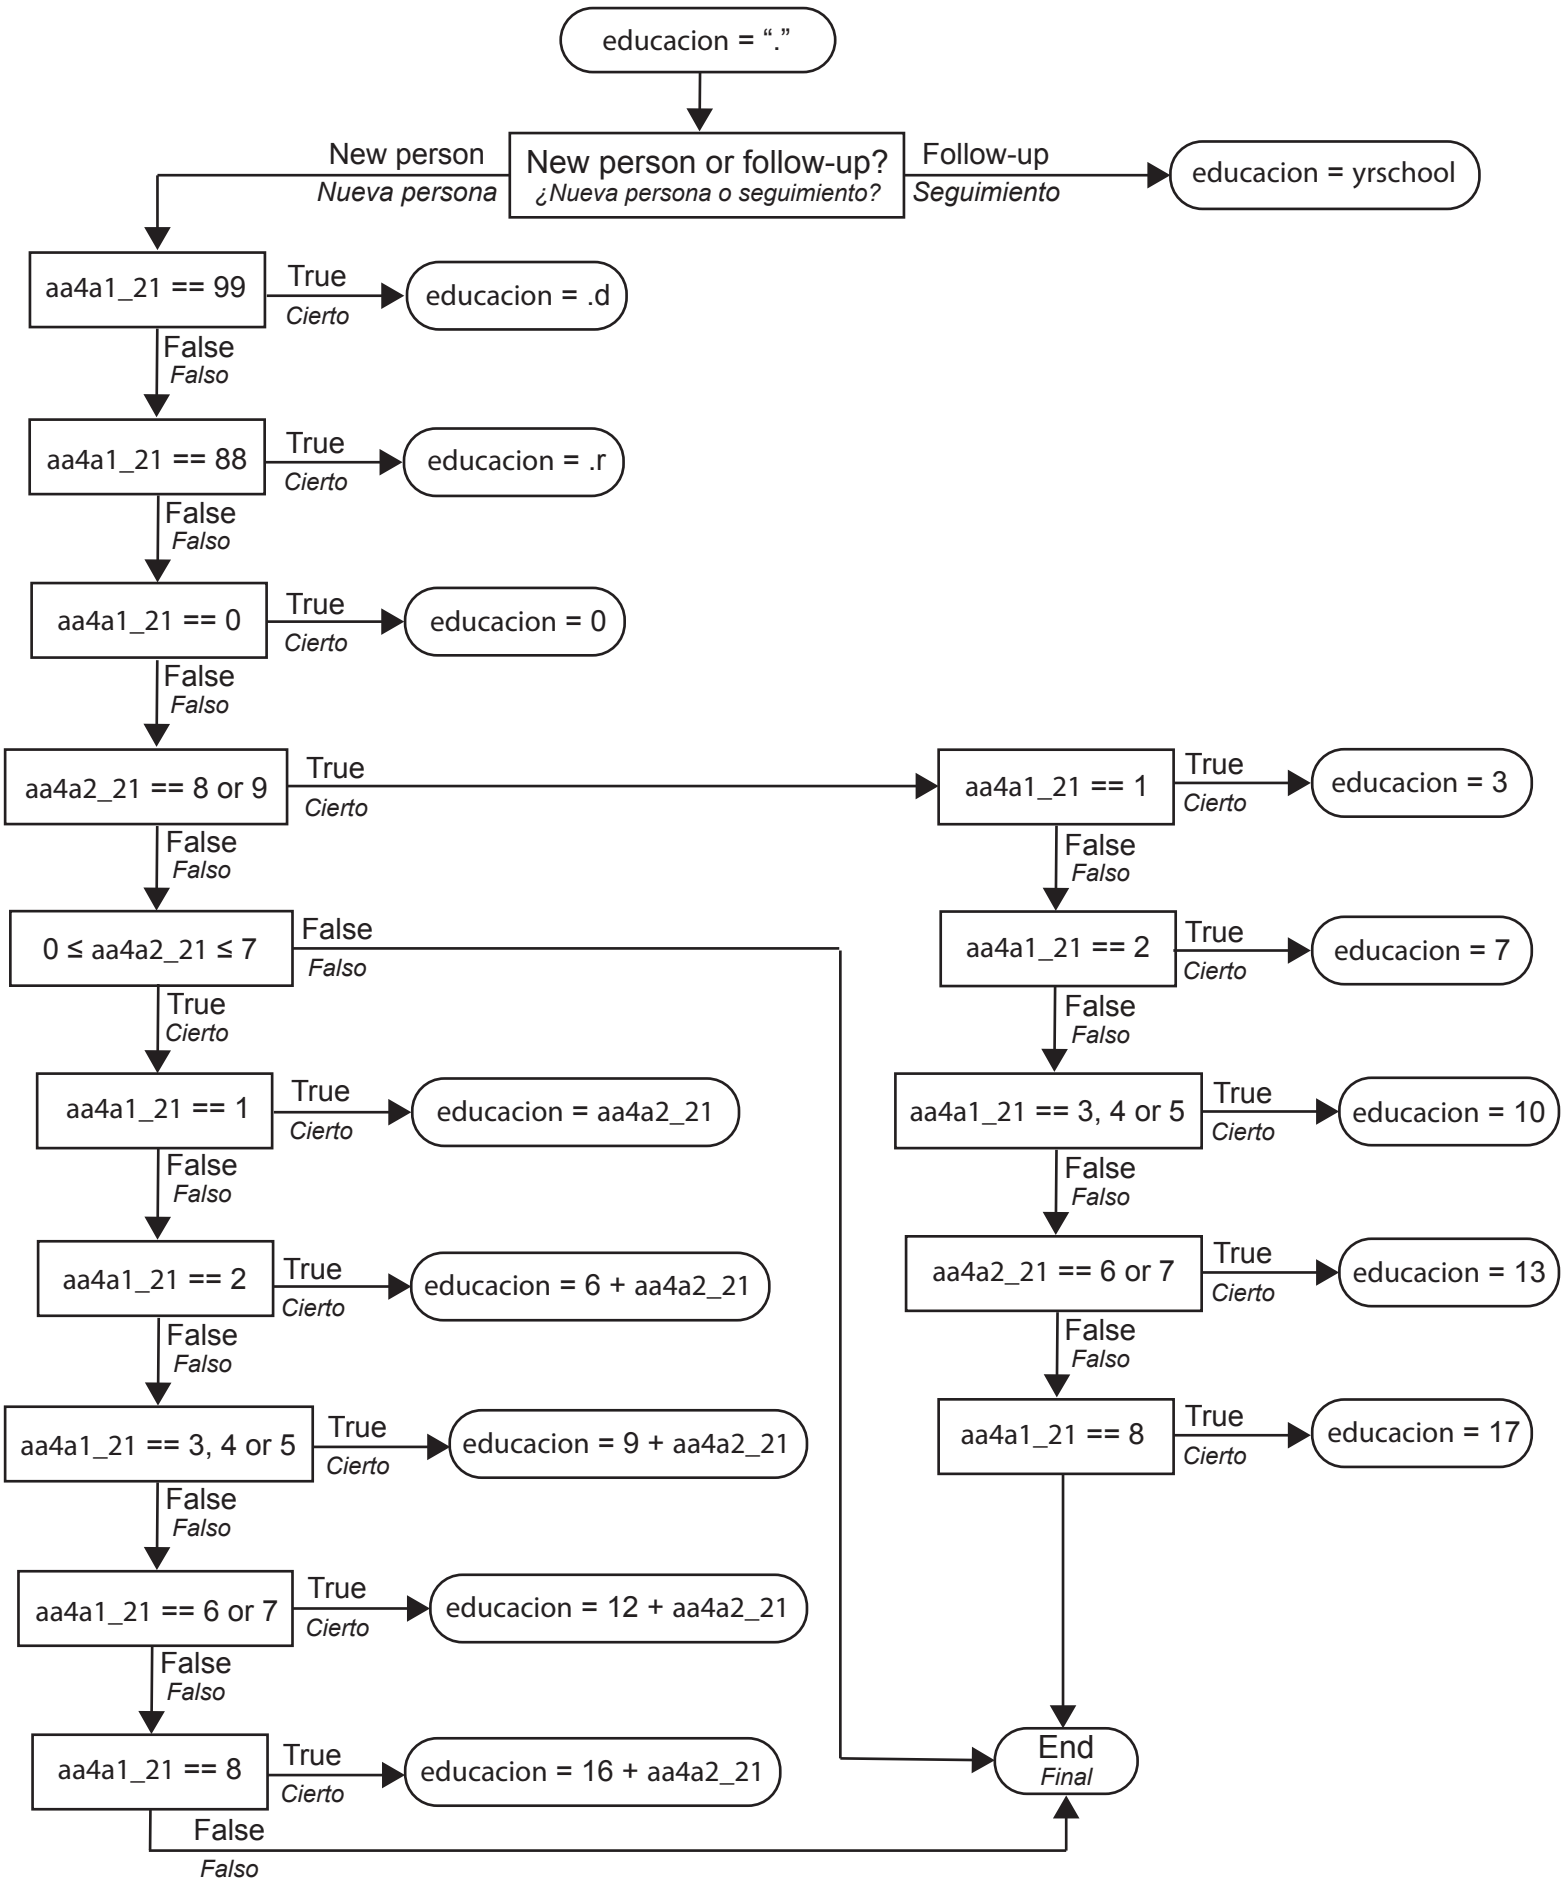
4. Construction of variable indicating whether or not subject lives in large urban area (urbano_21) from raw data

*Construcción de variable que indica si las vidas de los sujetos en grandes áreas urbanas son (*urbano_21*) a partir de variables brutas*



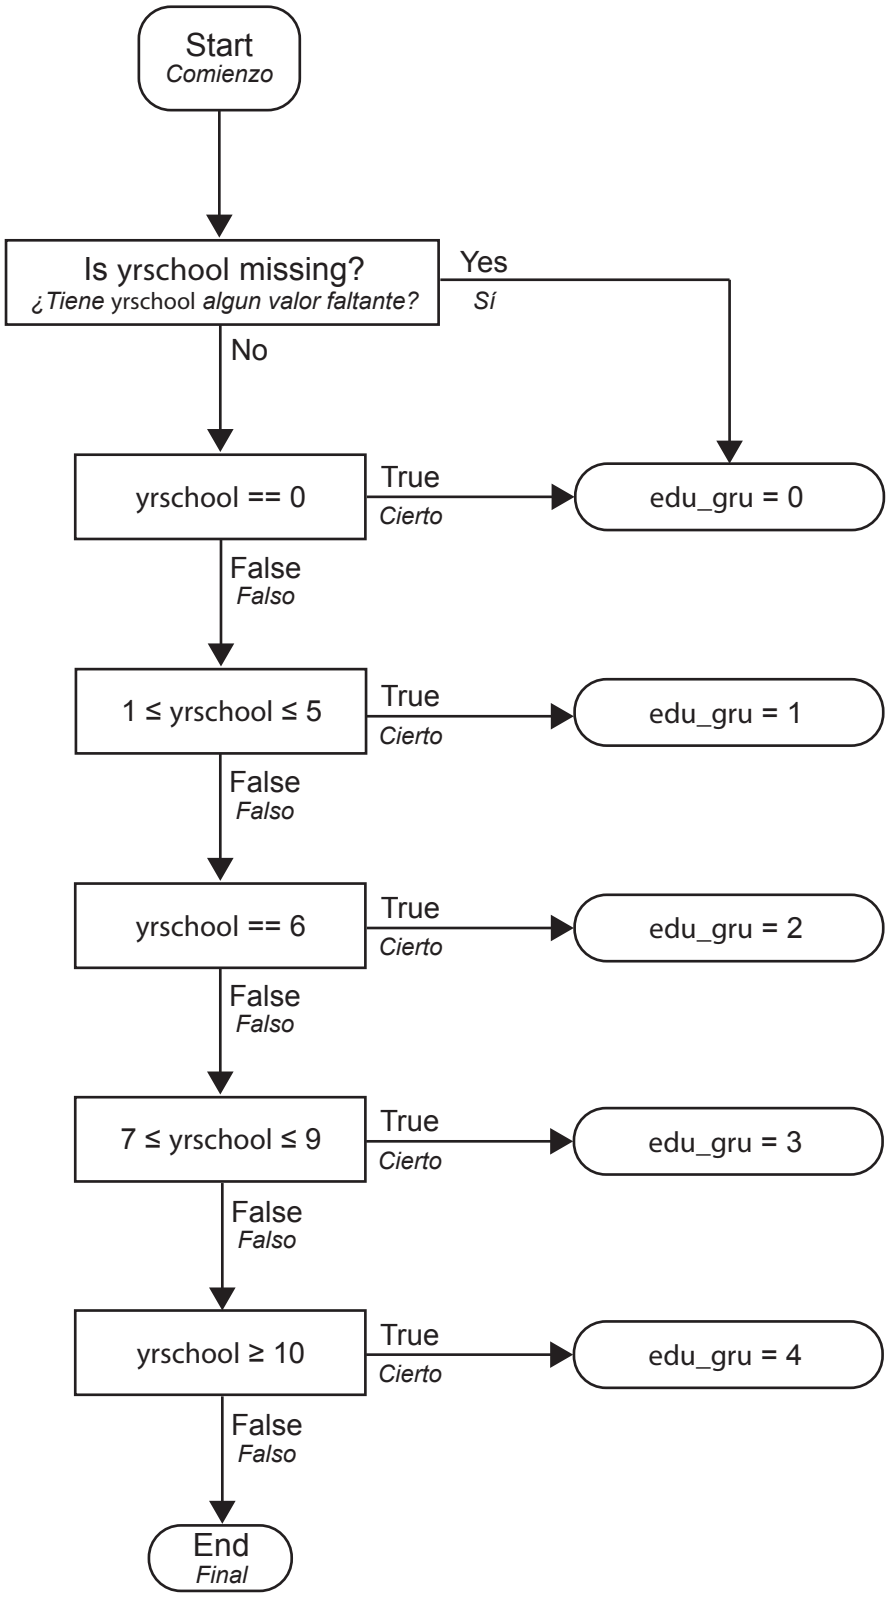
5. Construction of number of years of education (educacion) from raw variables

*Construcción de número de años de educación (*educación*) a partir de variables brutas*



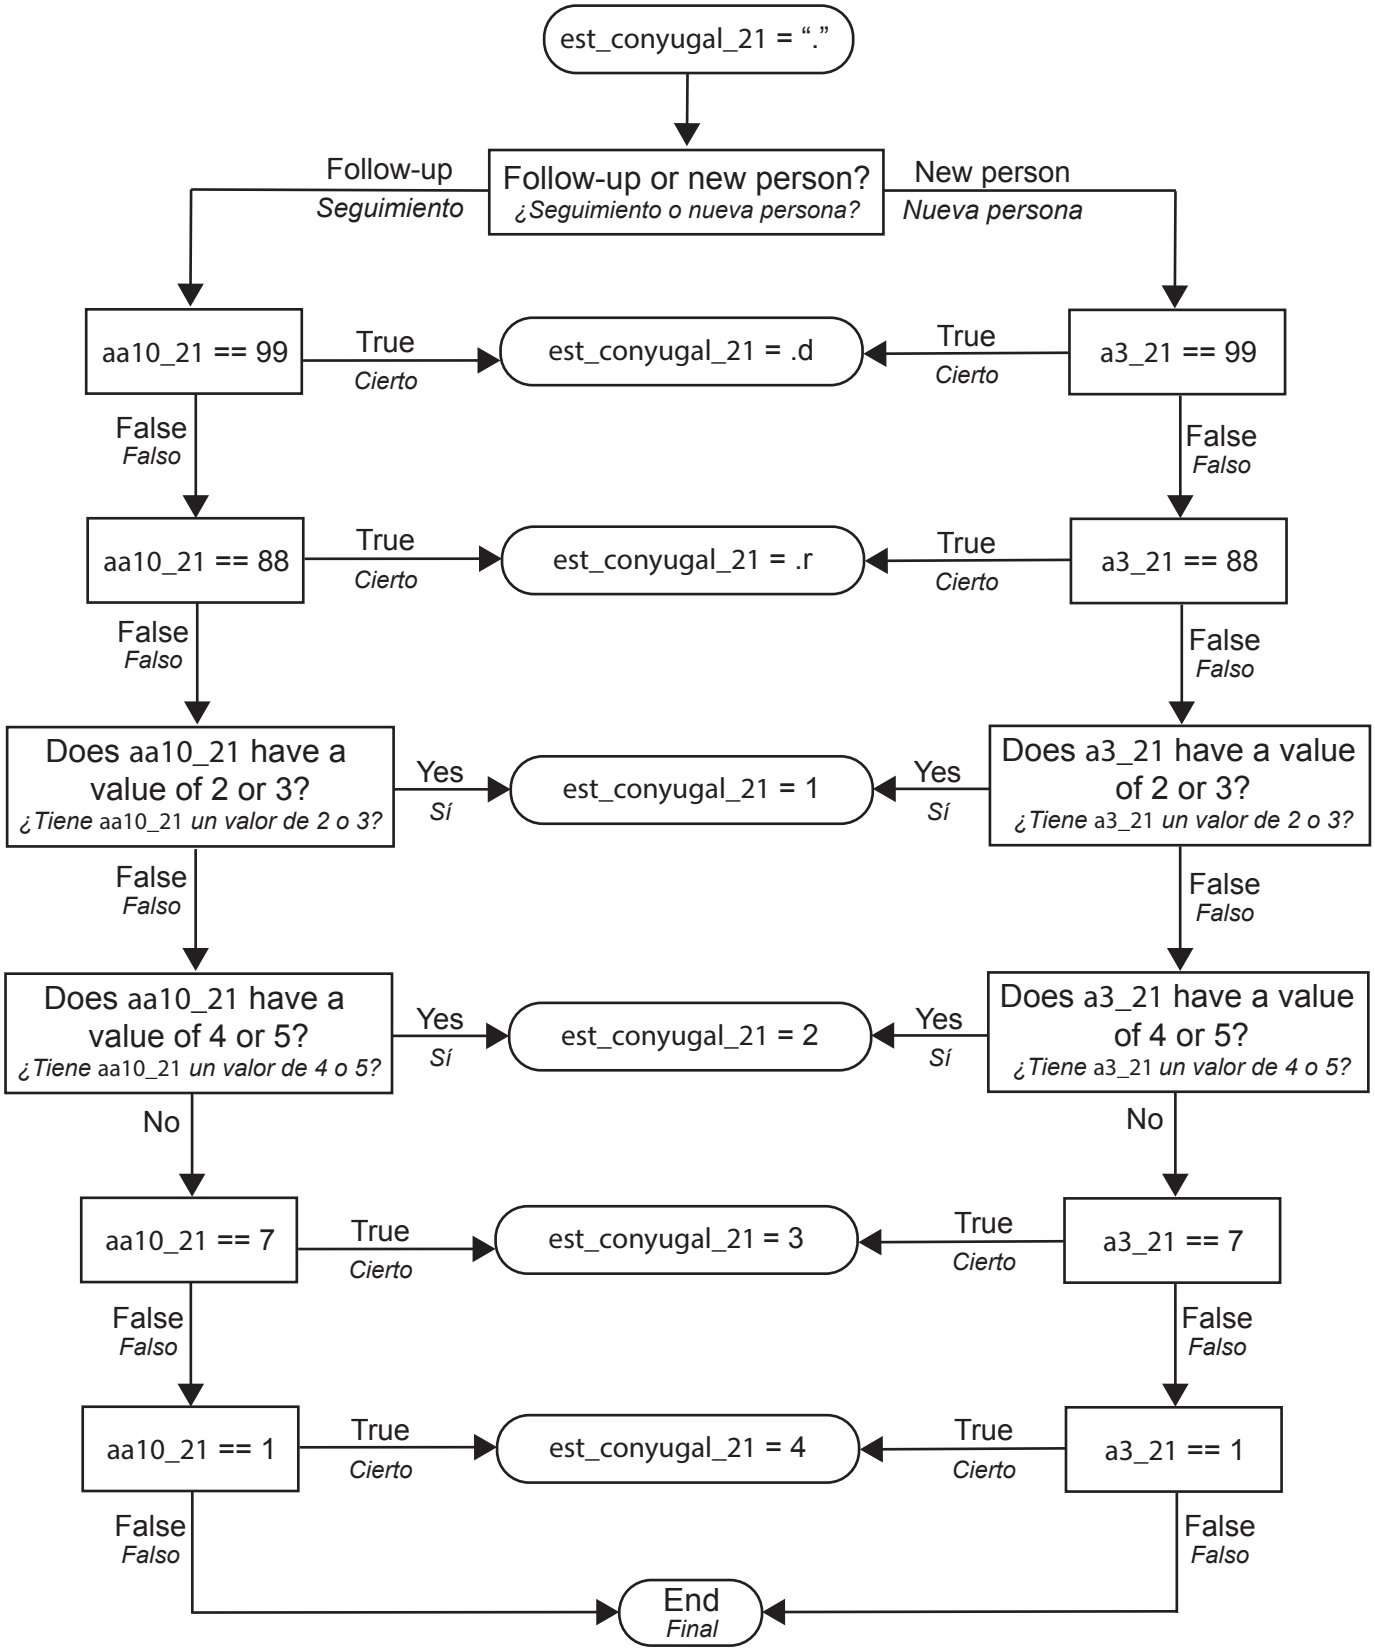
6. Construction of groups (edu_gru) from the number of years of education (yrschool)

Construcción de la agrupación (edu_gru) *a partir del numero de años de educacion* (yrschool)



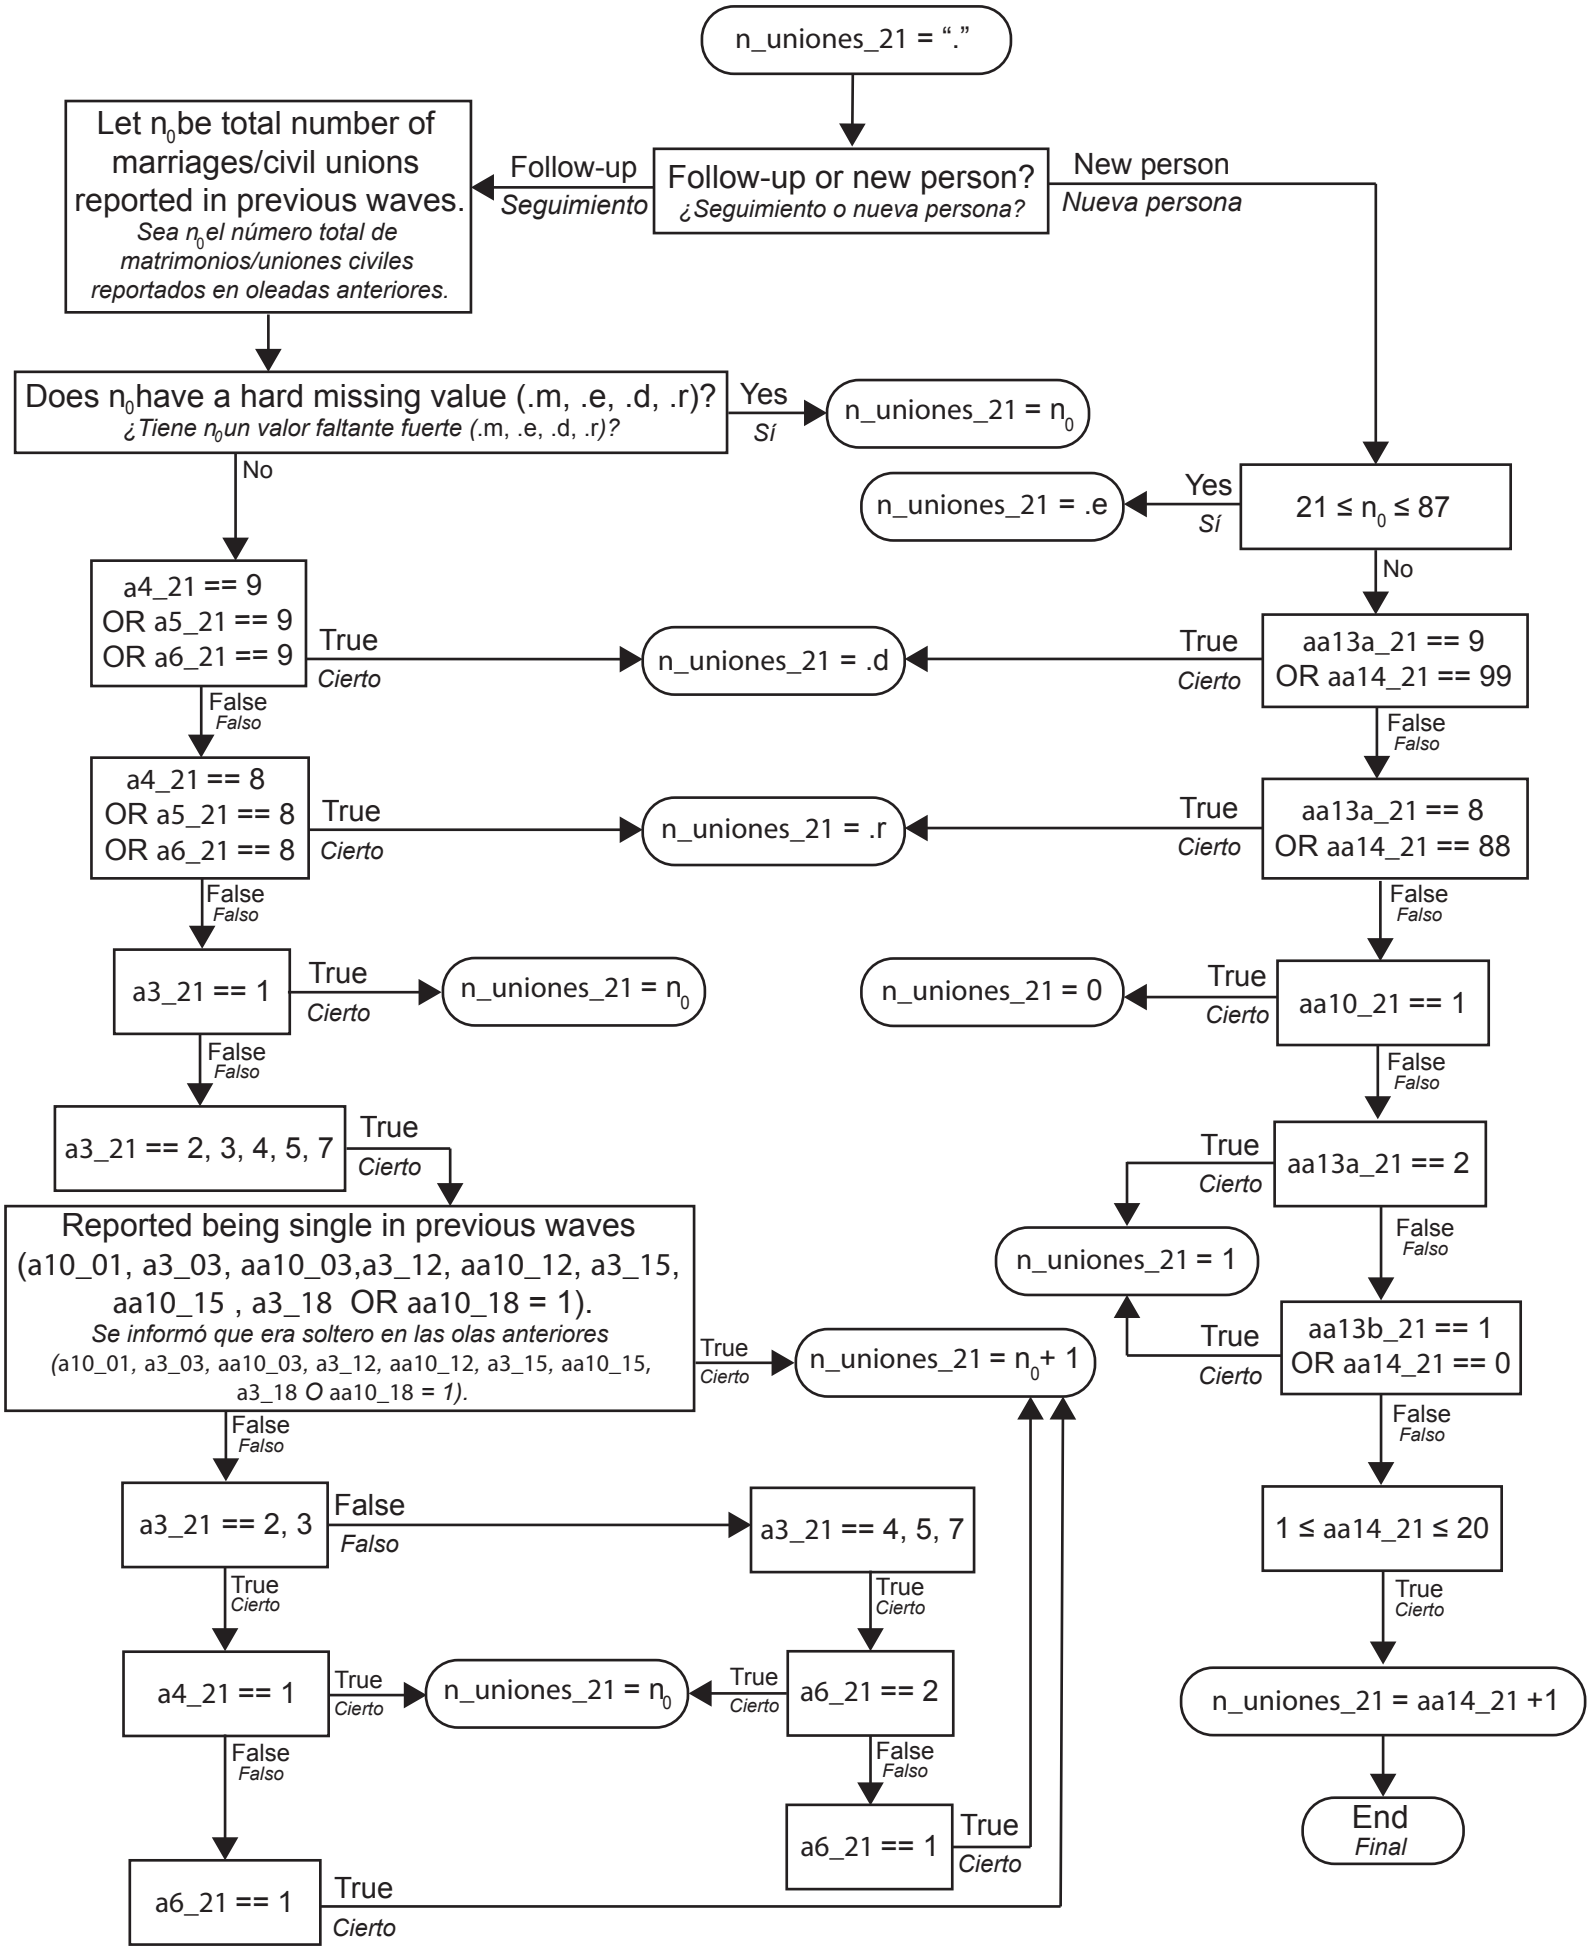
7. Construction of marital status (est_conyugal_21) from raw data

*Construcción del estrado conyugal (*est_conyugal_21*) a partir de variables brutas*



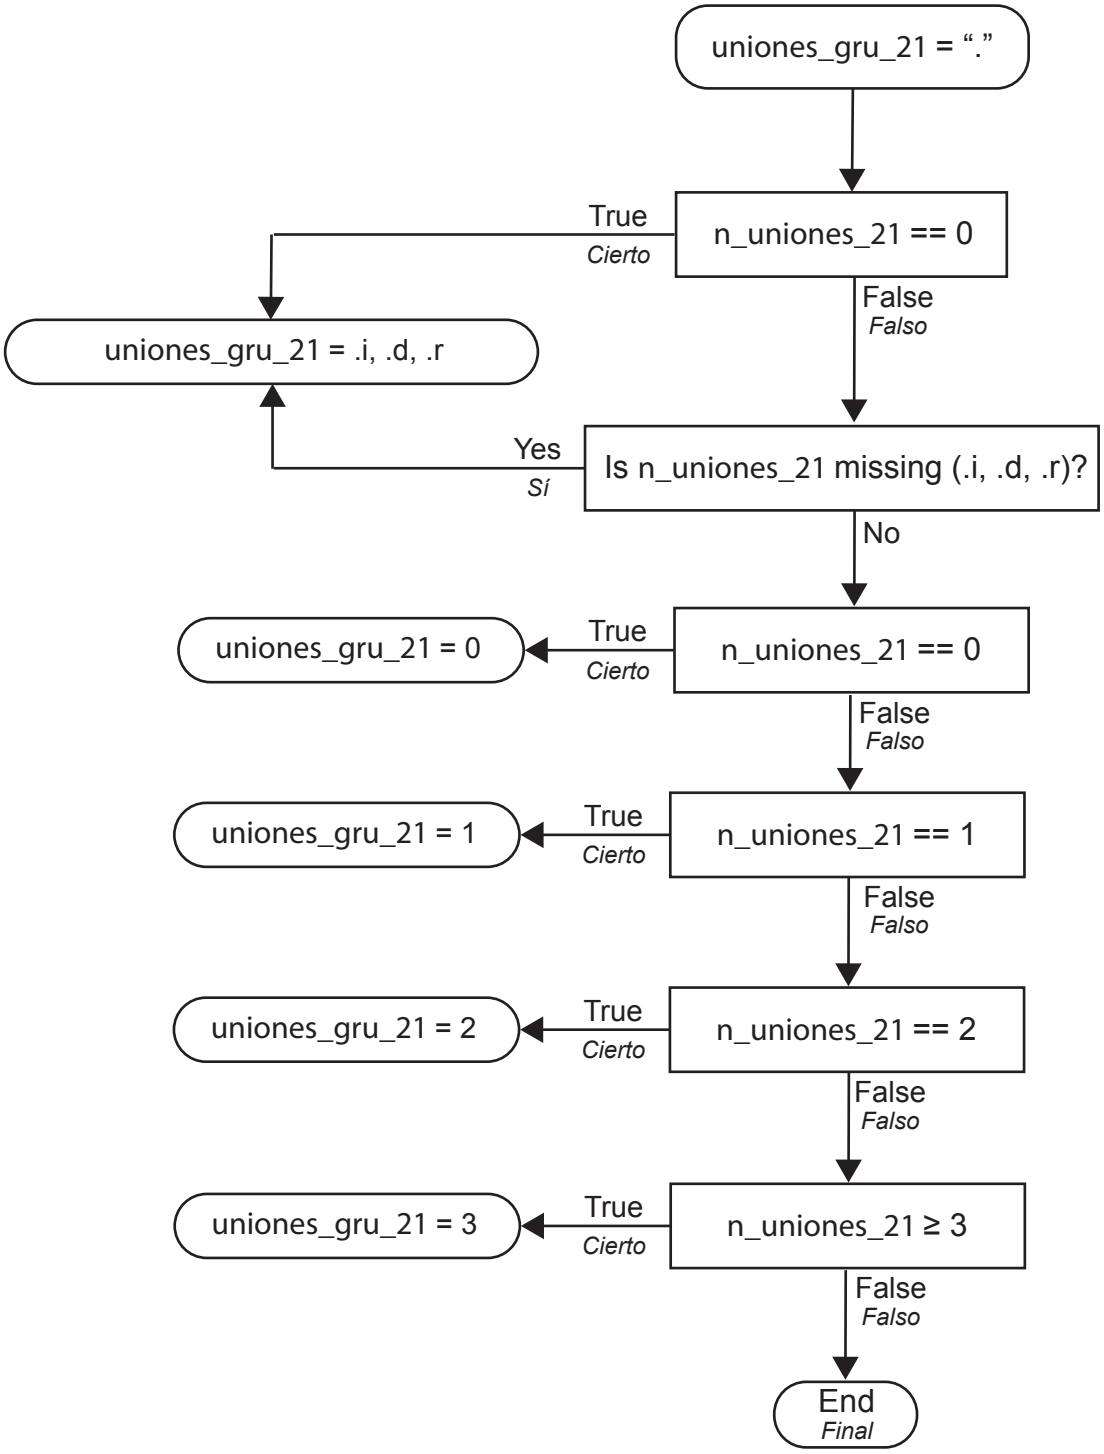
8. Construction of n_uniones_21 from raw data

Construcción de n_uniones_21 *a partir de variables en bruto*



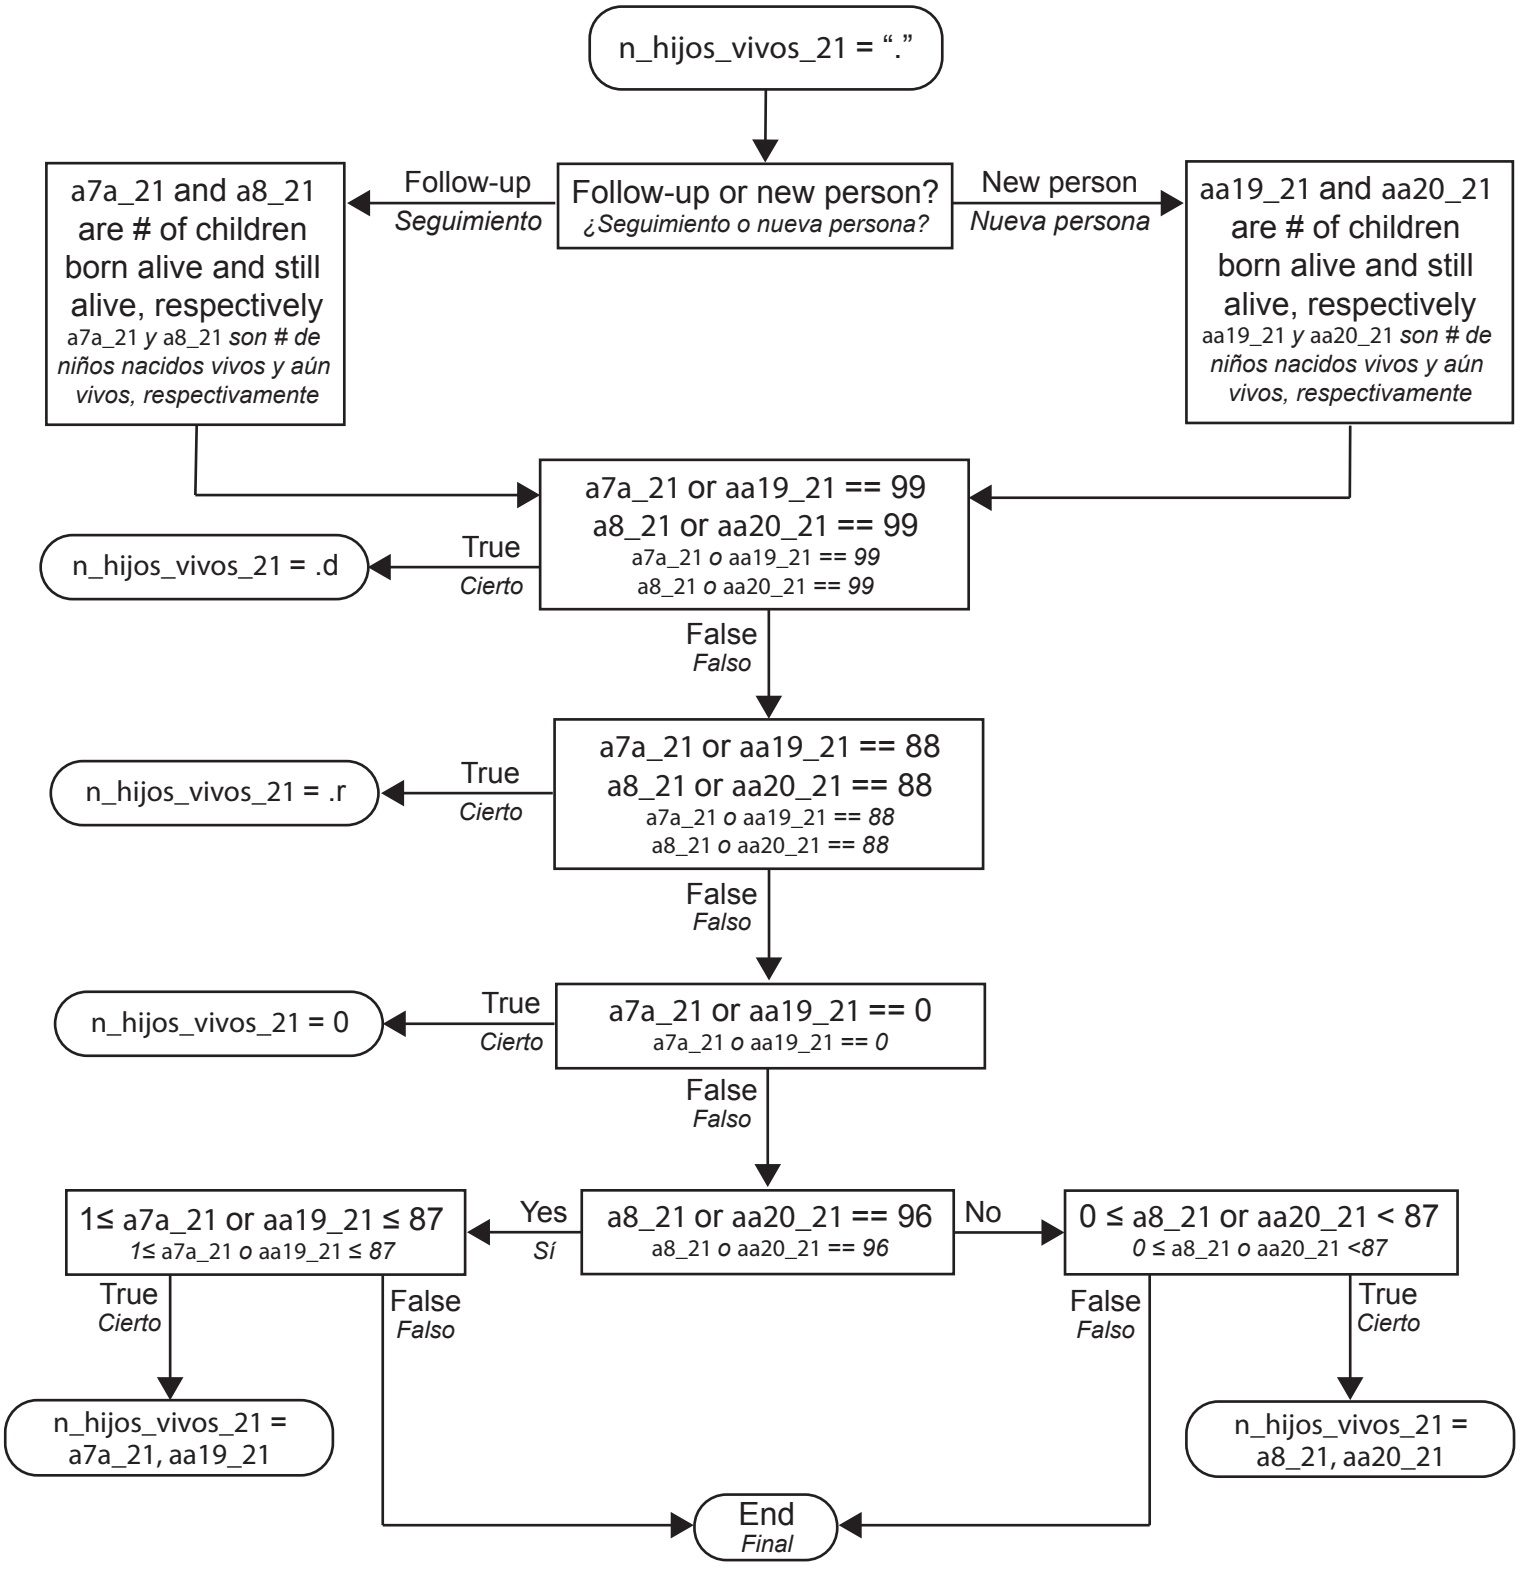
9. Construction of categorical variable indicating number of unions (uniones_gru_21) from numeric variable of number of living children (n_uniones_21)

*Construcción de una variable categórica que indica el número de hijos vivos (*uniones_gru_21*) a partir de la variable numérica del número de hijos vivos (*n_uniones_21*)*



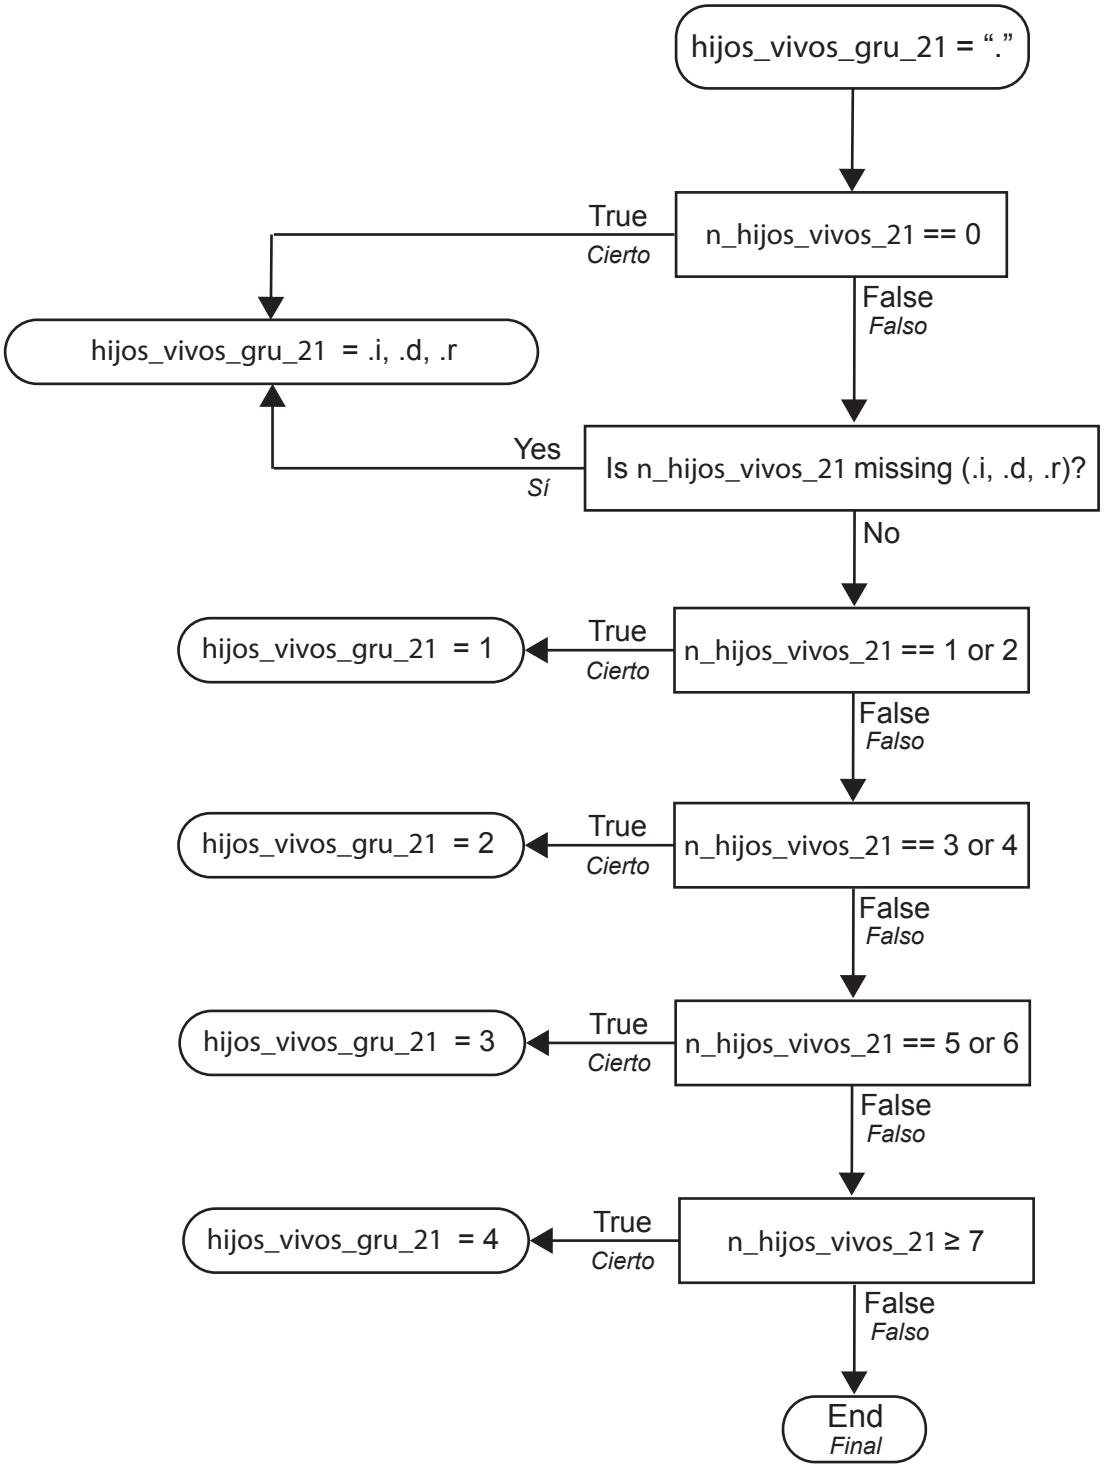
10. Construction of variable of number of living children (n_hijos_vivos_21) from raw data

*Construcción de variable de número de niños vivos (*n_hijos_vivos_21*) a partir de variables brutas*



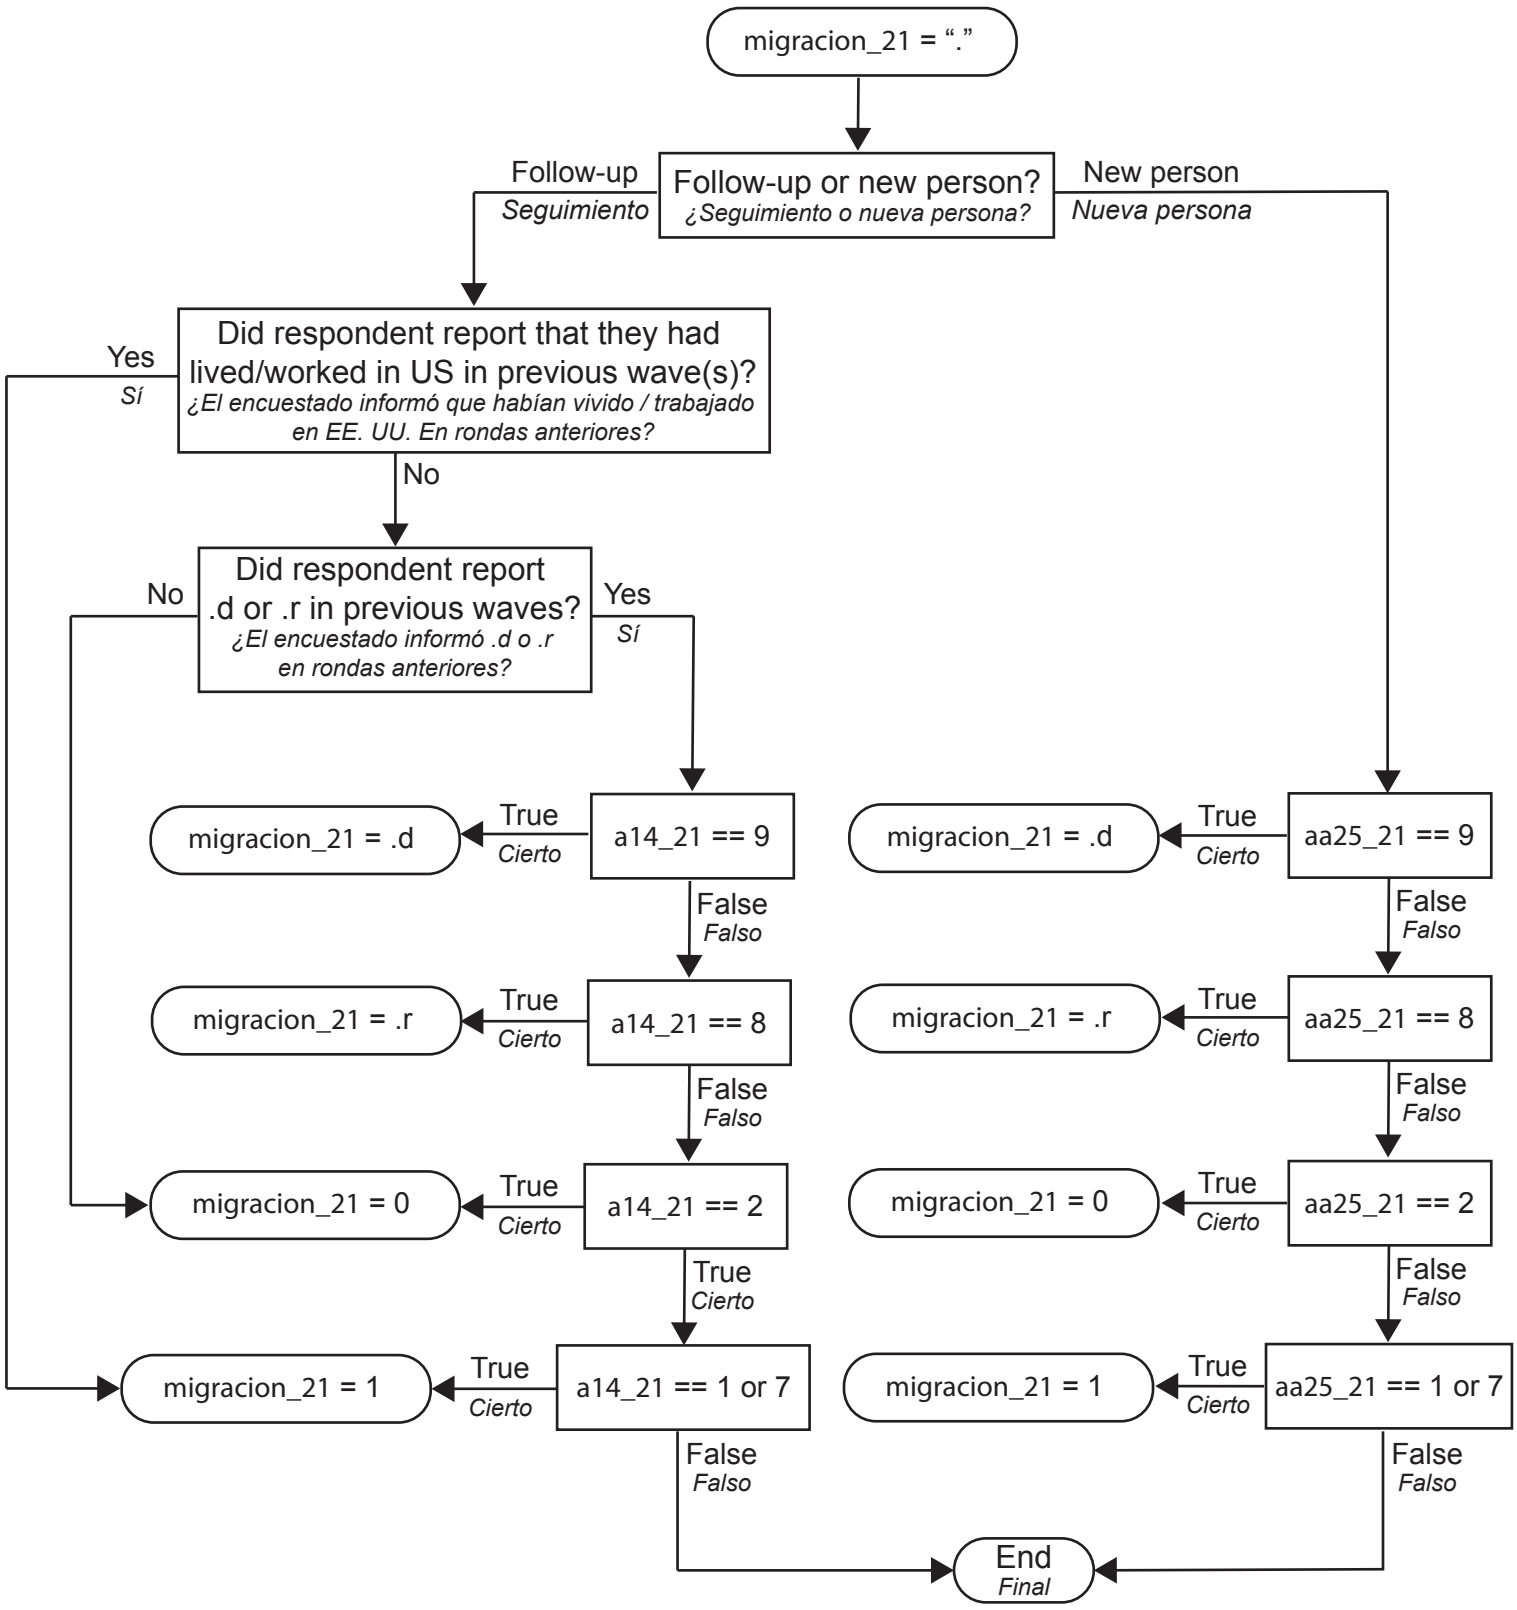
11. Construction of categorical variable indicating number of living children (hijos_vivos_gru_21) from numeric variable of number of living children (n_hijos_vivos_21)

*Construcción de una variable categórica que indica el número de hijos vivos (*hijos_vivos_gru_21*) a partir de la variable numérica del número de hijos vivos (*n_hijos_vivos_21*)*



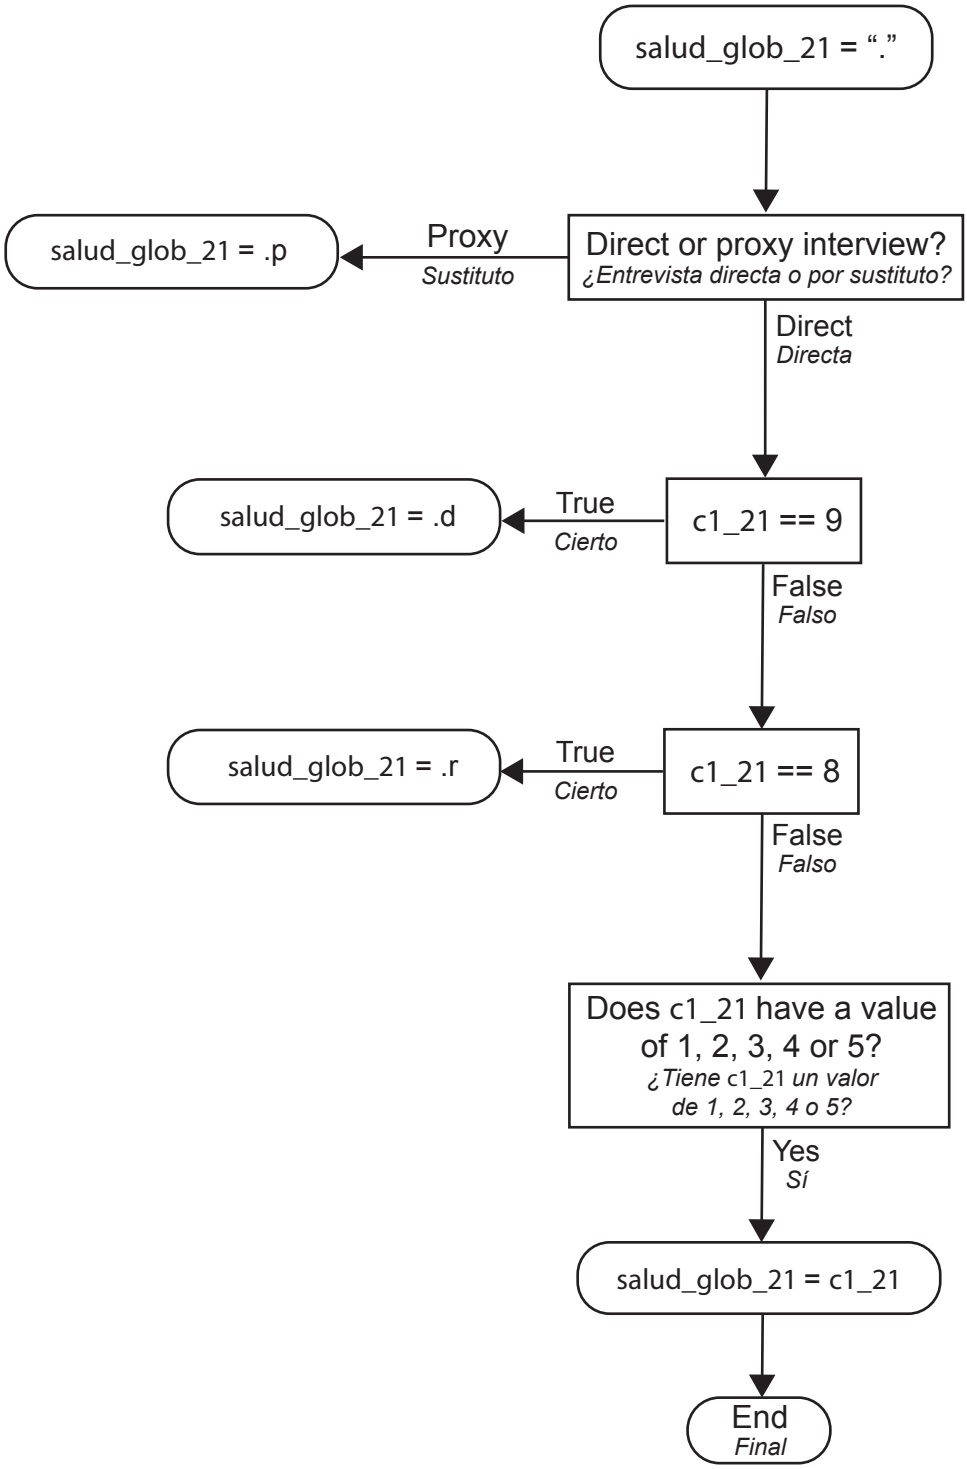
12. Construction of migracion_21 from raw data

Construcción de migration_21 *a partir de variables brutas*



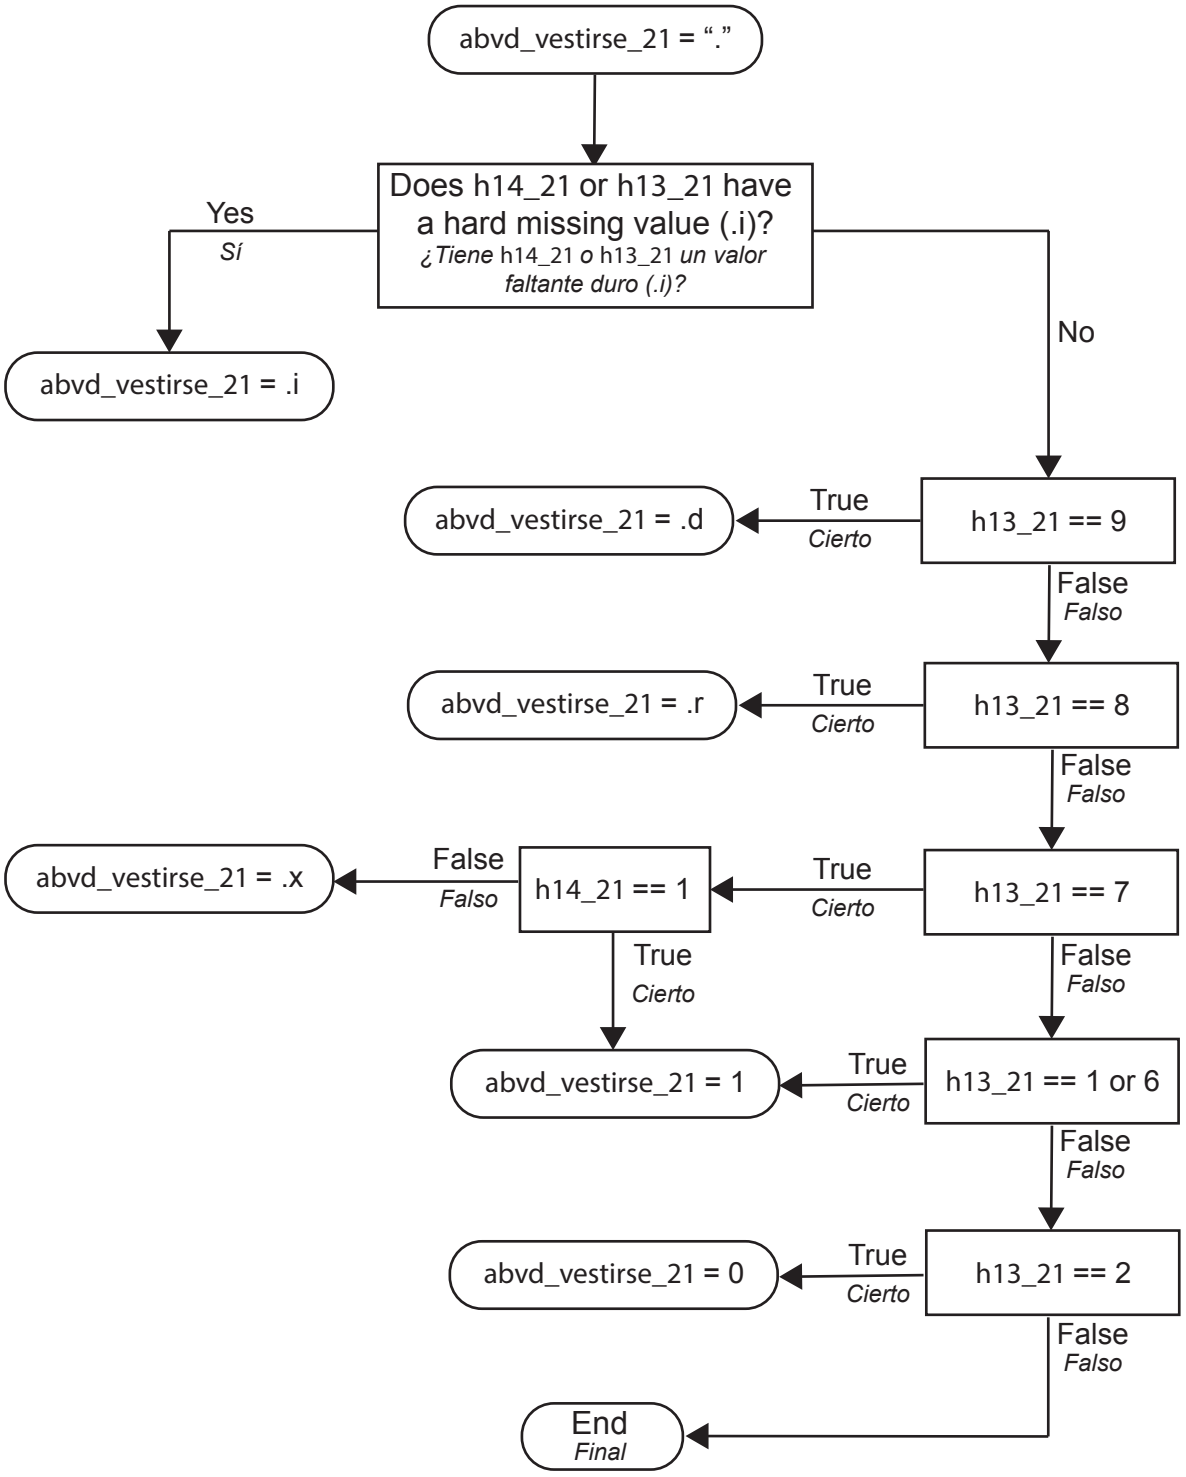
13. Construction of global self-reported health (salud_glob_21) from raw data

*Construcción de salud general autodeclarada (*salud_glob_21*) a partir de variables brutas*



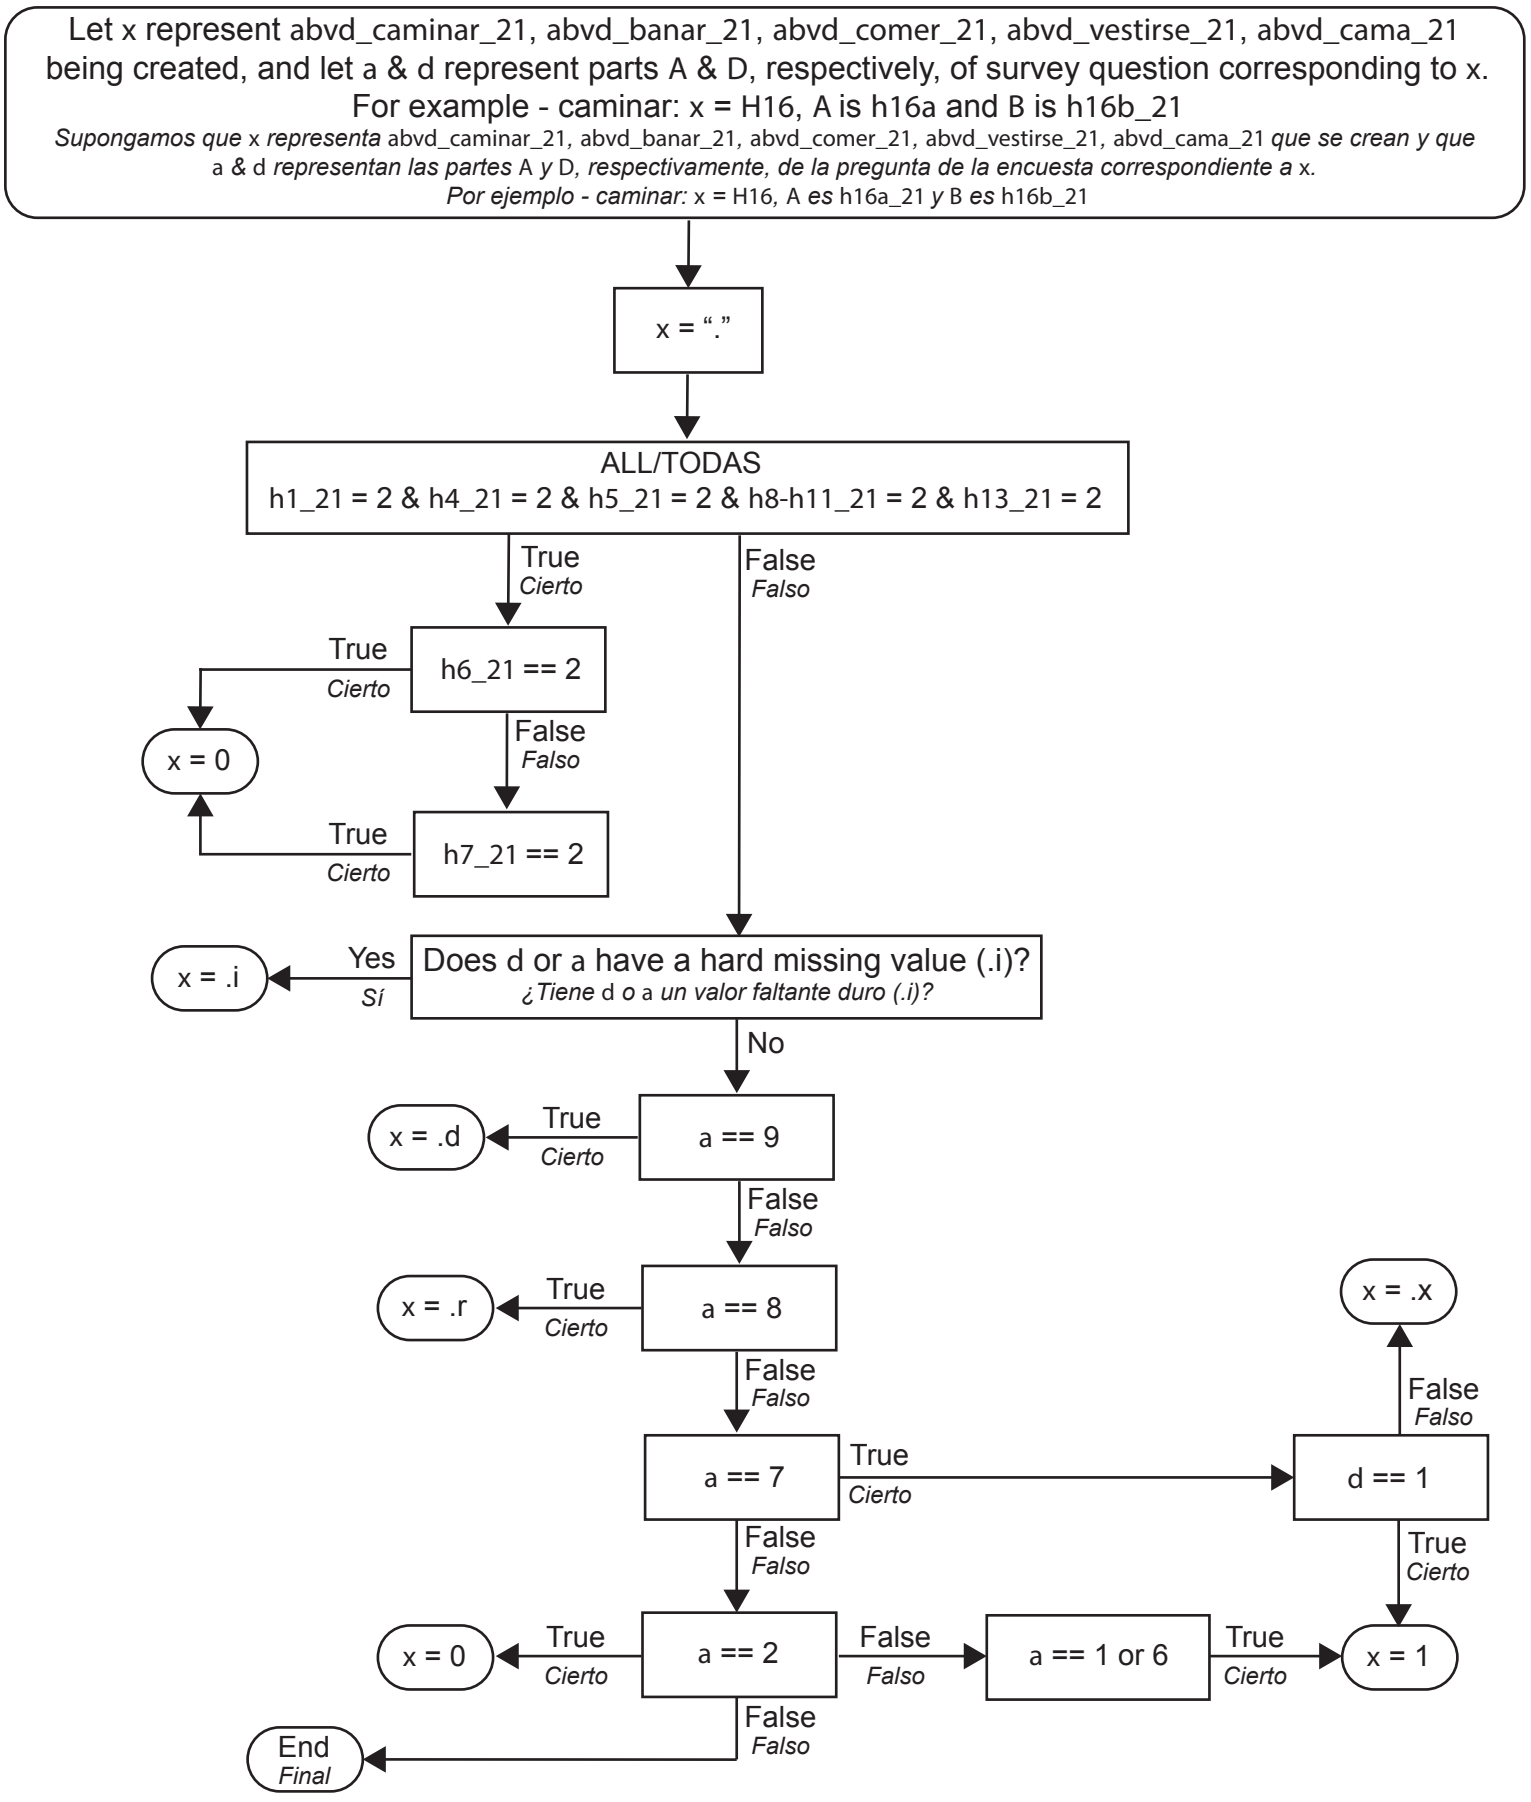
14. Construction of variable indicating difficulty getting dressed (abvd_vestirse_21) from raw data

*Construcción de variable que indican dificultad para vestirse (*abvd_vestirse_21*) a partir de variables brutas*



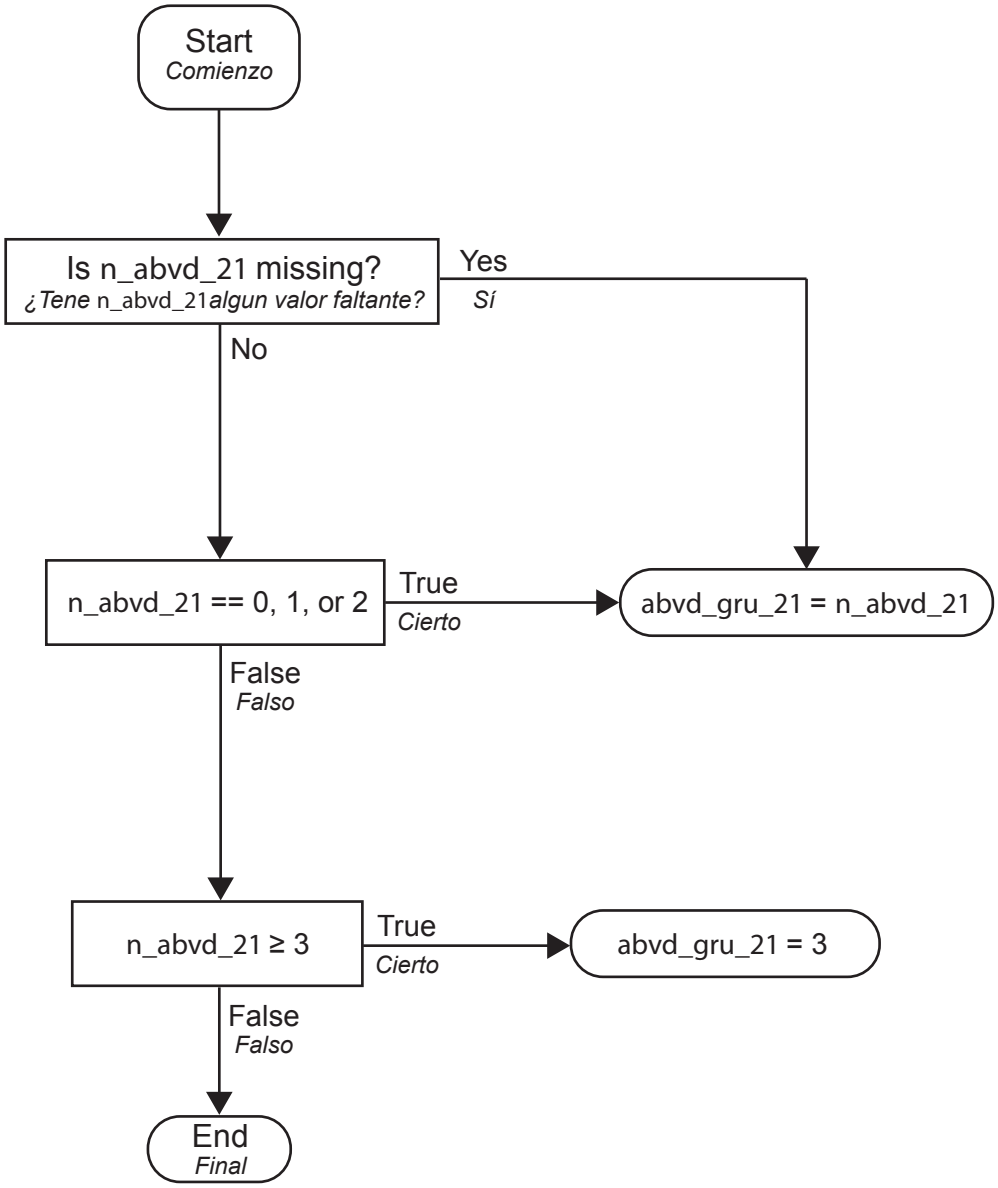
15 - 19. Construction of variables indicating difficulties with activities of daily living (ADL), other than dressing from raw data

Construcción de variables que indicar limitacion con actividades de la vida diaria (ABVD) distintas vestirse a partir de variables brutas



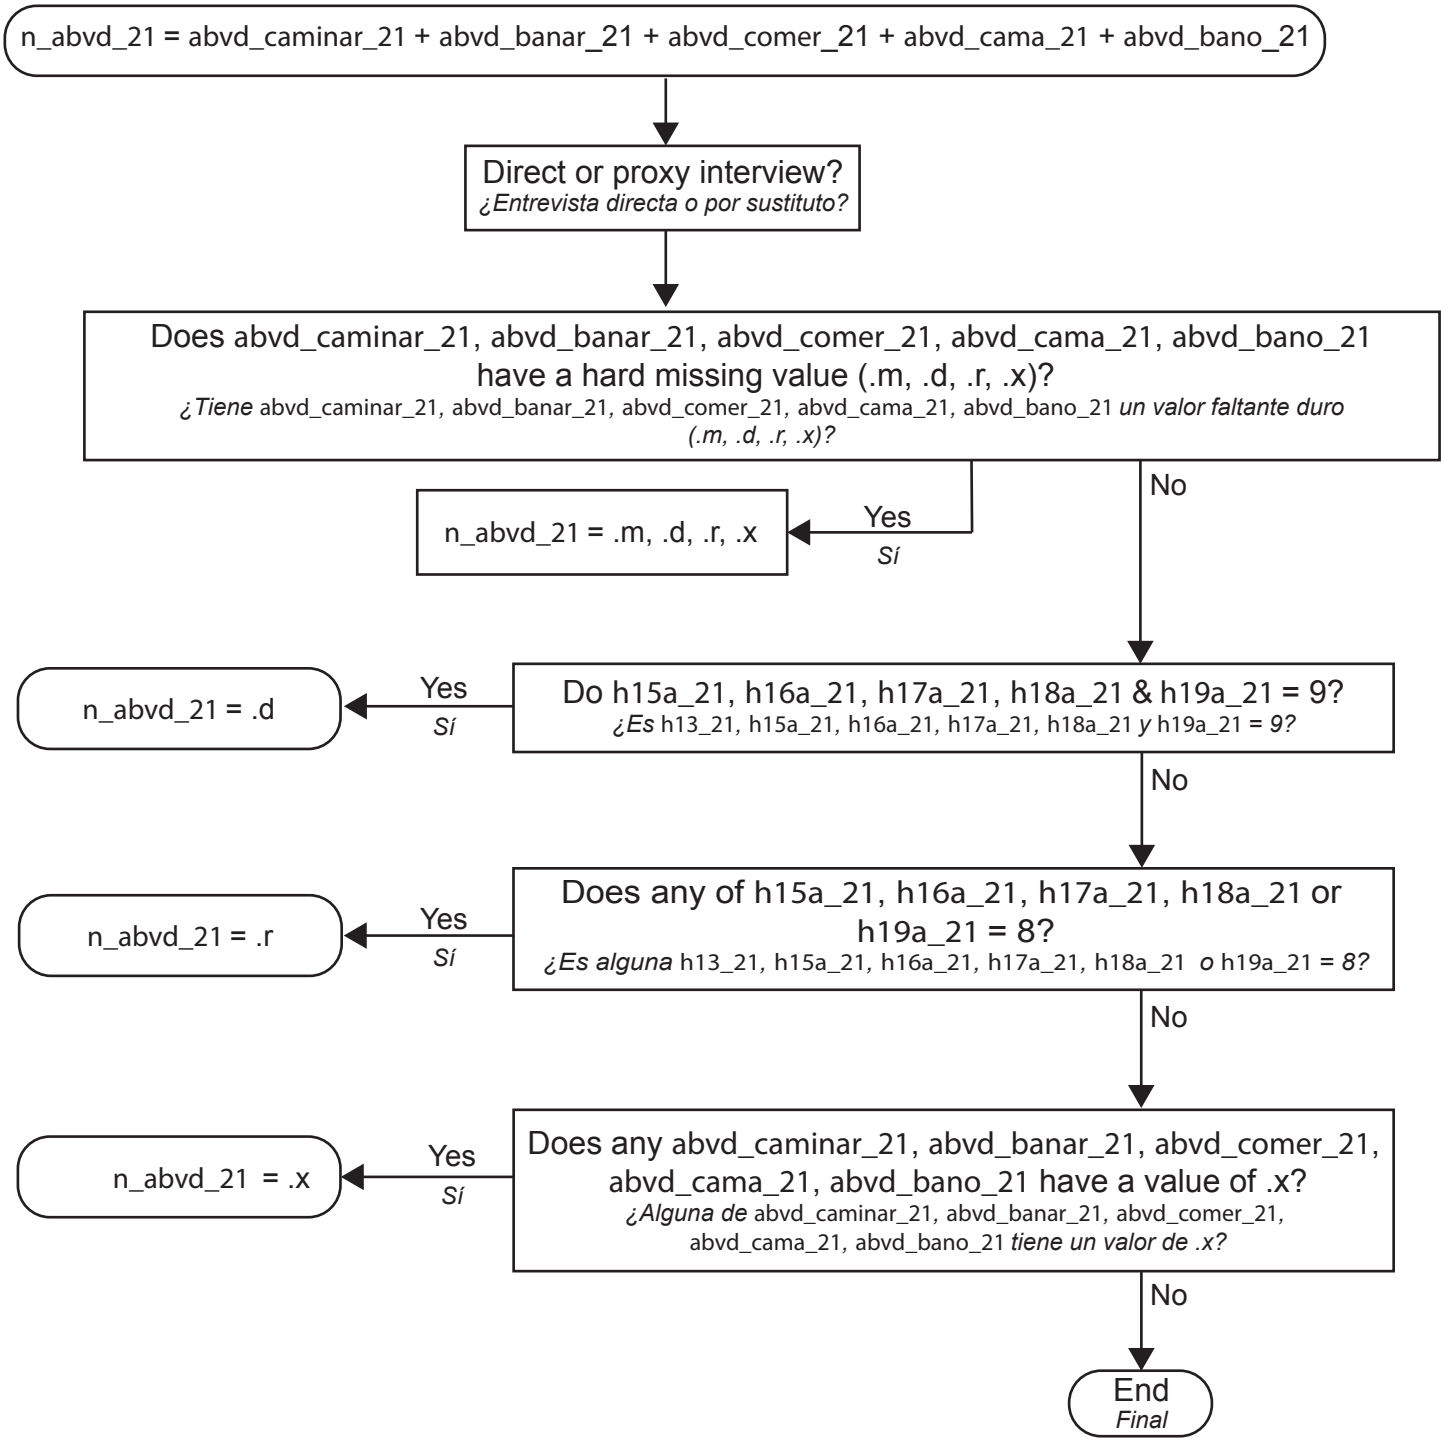
20. Construction of groups of ADLs (abvd_gru_21) from the number of difficulties with ADLs (n_abvd_21)

Construcción de la agrupación de ABVDs (abvd_gru_21) *a partir del numero de limitaciones con ABVSs* (n_abvd_21)



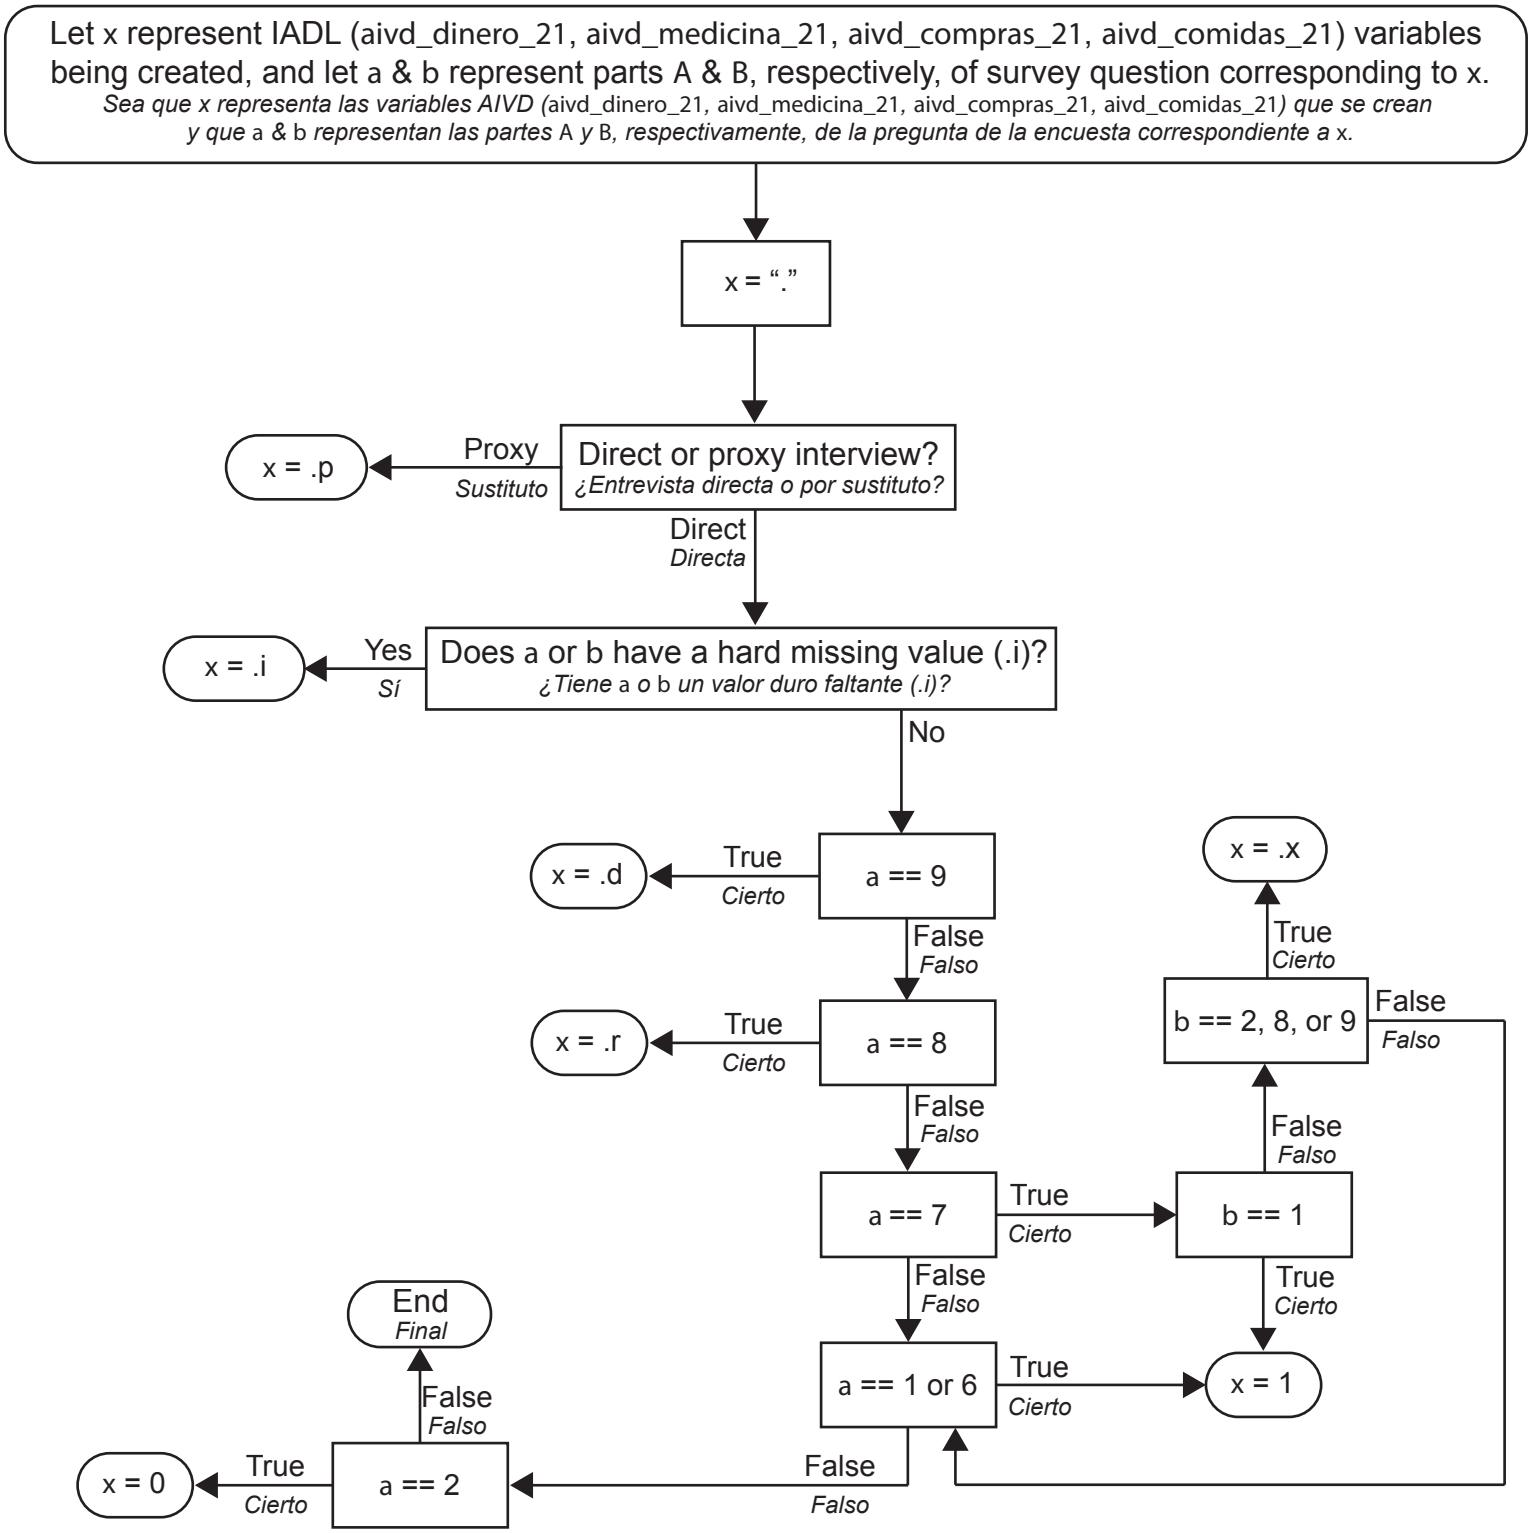
21. Construction of number of difficulties with ADLs (n_abvd_21) from raw data & created variables

*Construcción de numero de ABVD (*n_abvd_21*) a partir variables brutas y creadas*



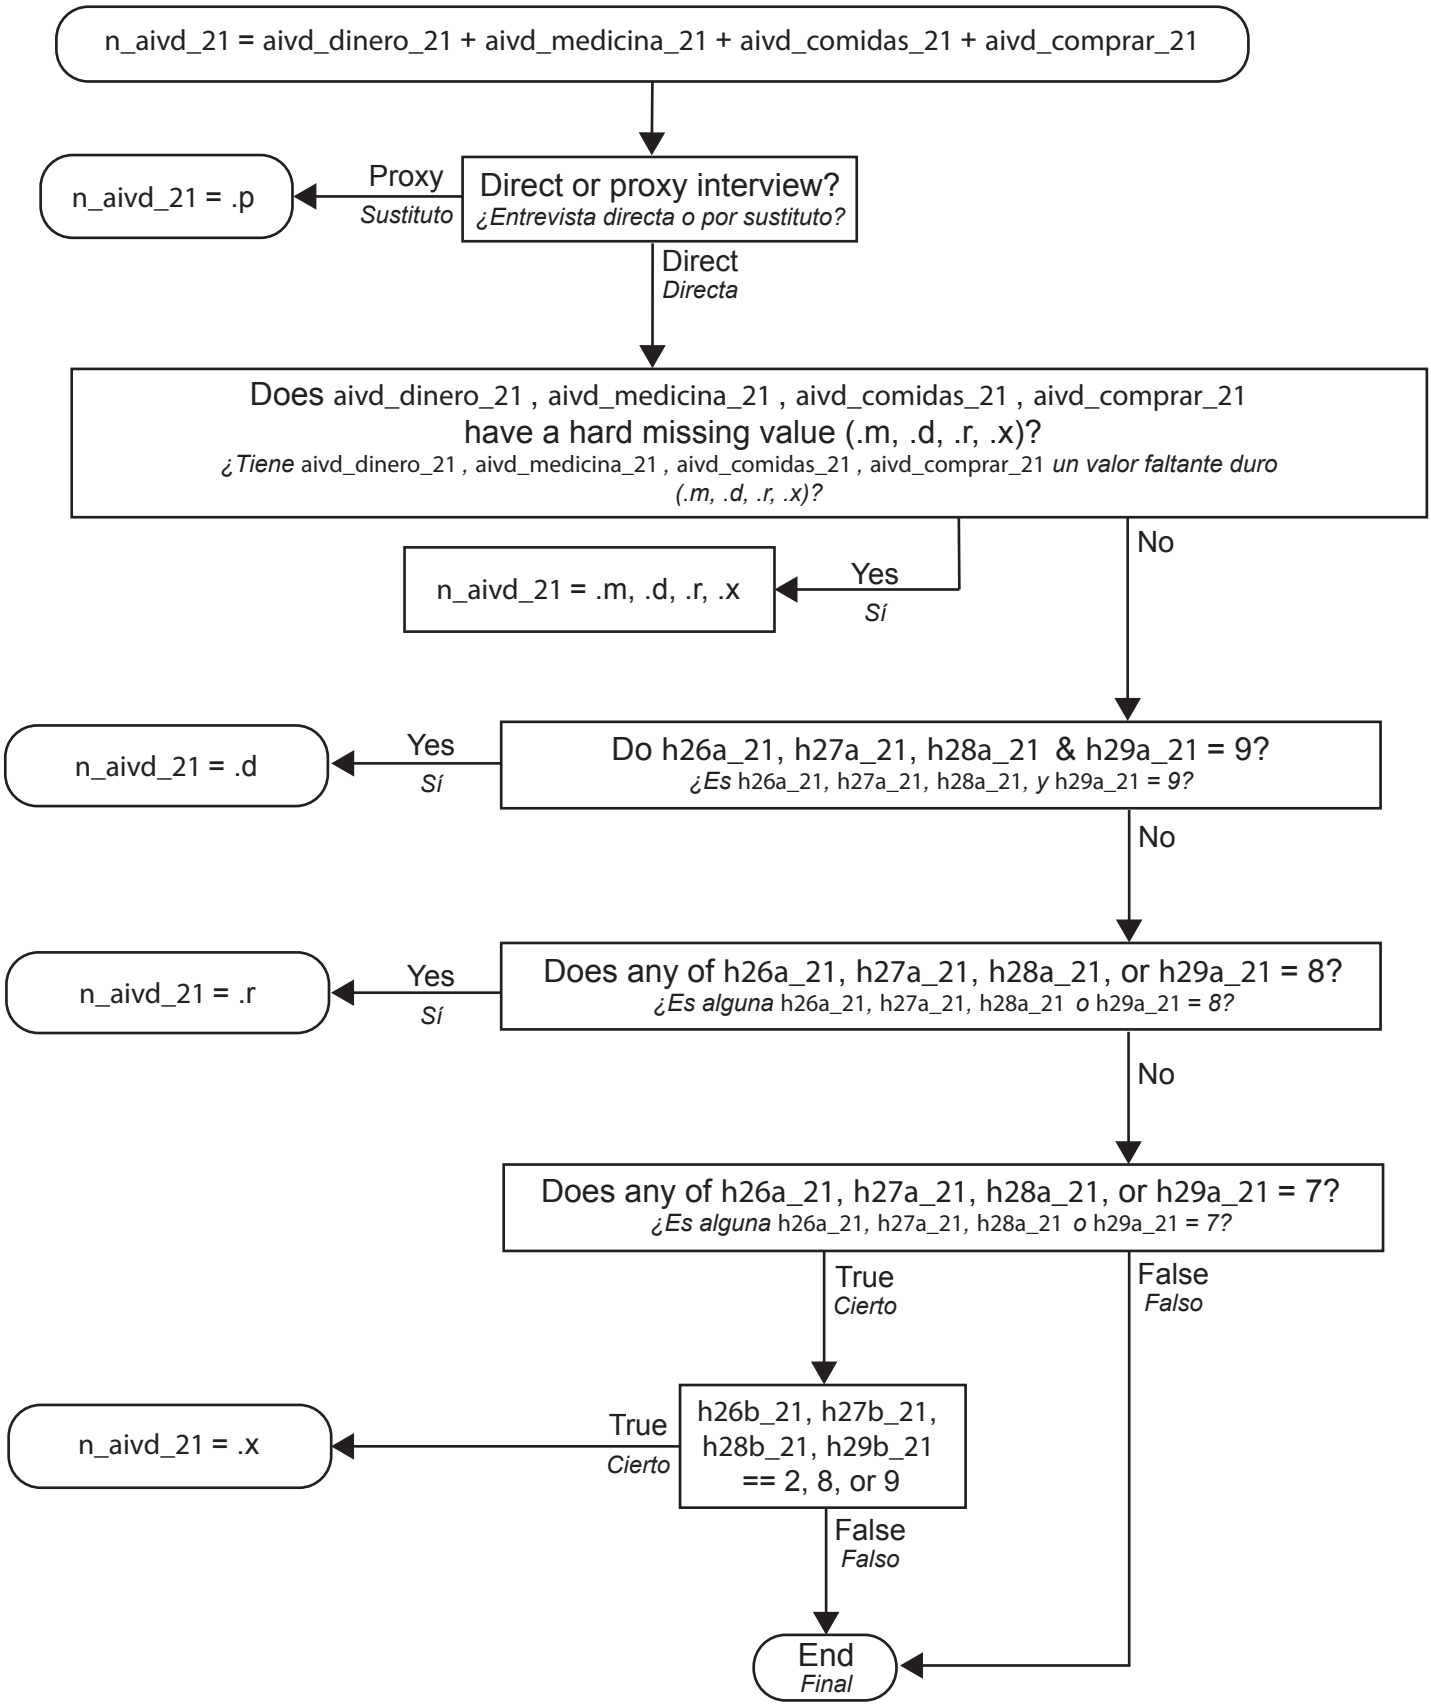
22 - 25. Construction of variables indicating difficulty with instrumental activities of daily living (IADL) variables from raw data

Construcción de variables que indican dificultad con actividades instrumentales de la vida diaria (AIVD) a partir de variables brutas



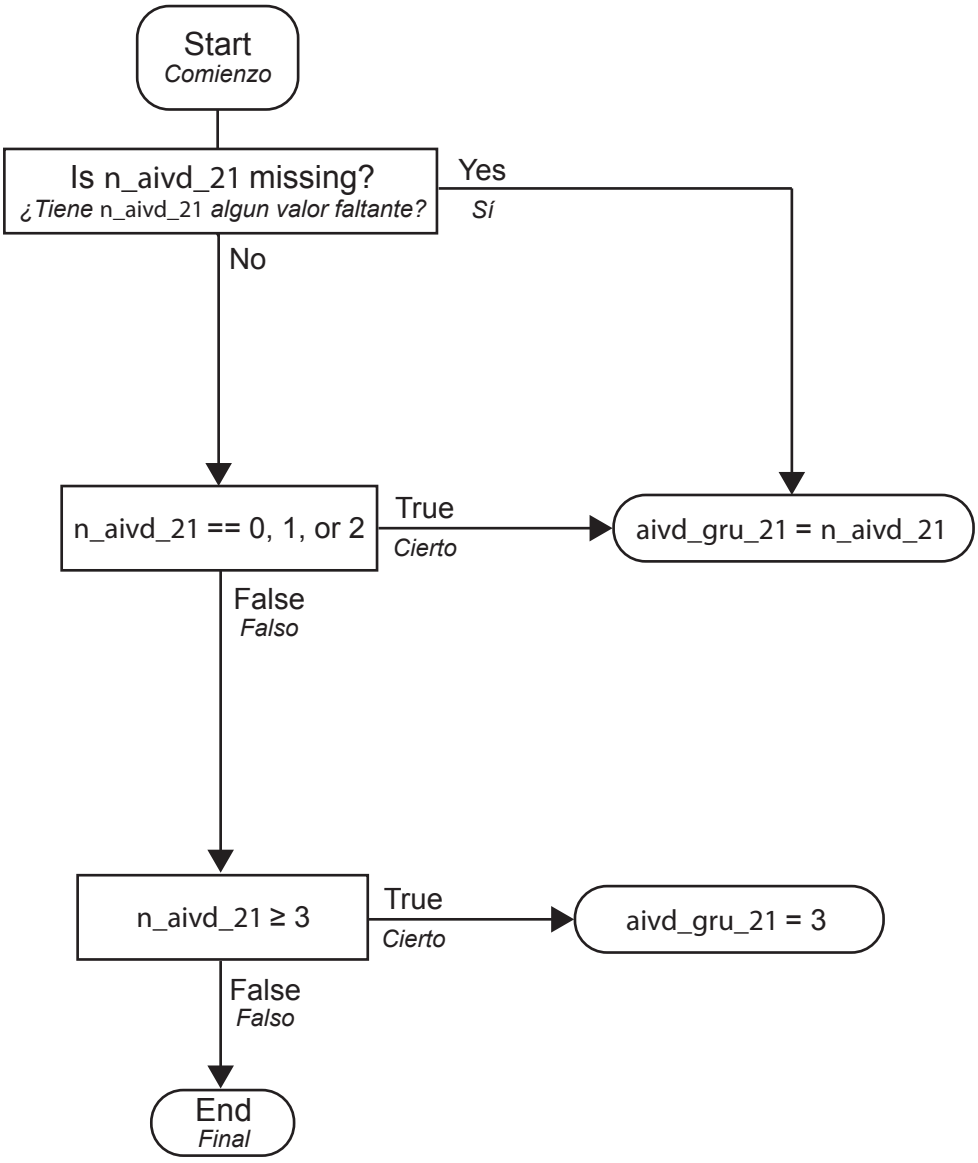
26. Construction of number of IADLs (n_aivd_21) from raw data & created variables

*Construcción de numero de AIVDs (*n_aivd_21*) a partir de variables brutas y creadas*



27. Construction of groups of IADLs (aivd_gru_21) from the number of limitations with IADLs (n_aivd_21)

*Construcción de la agrupación AIVDs (*aivd_gru_21*) a partir de numero de limitaciones con AIVDs (*n_aivd_21*)*



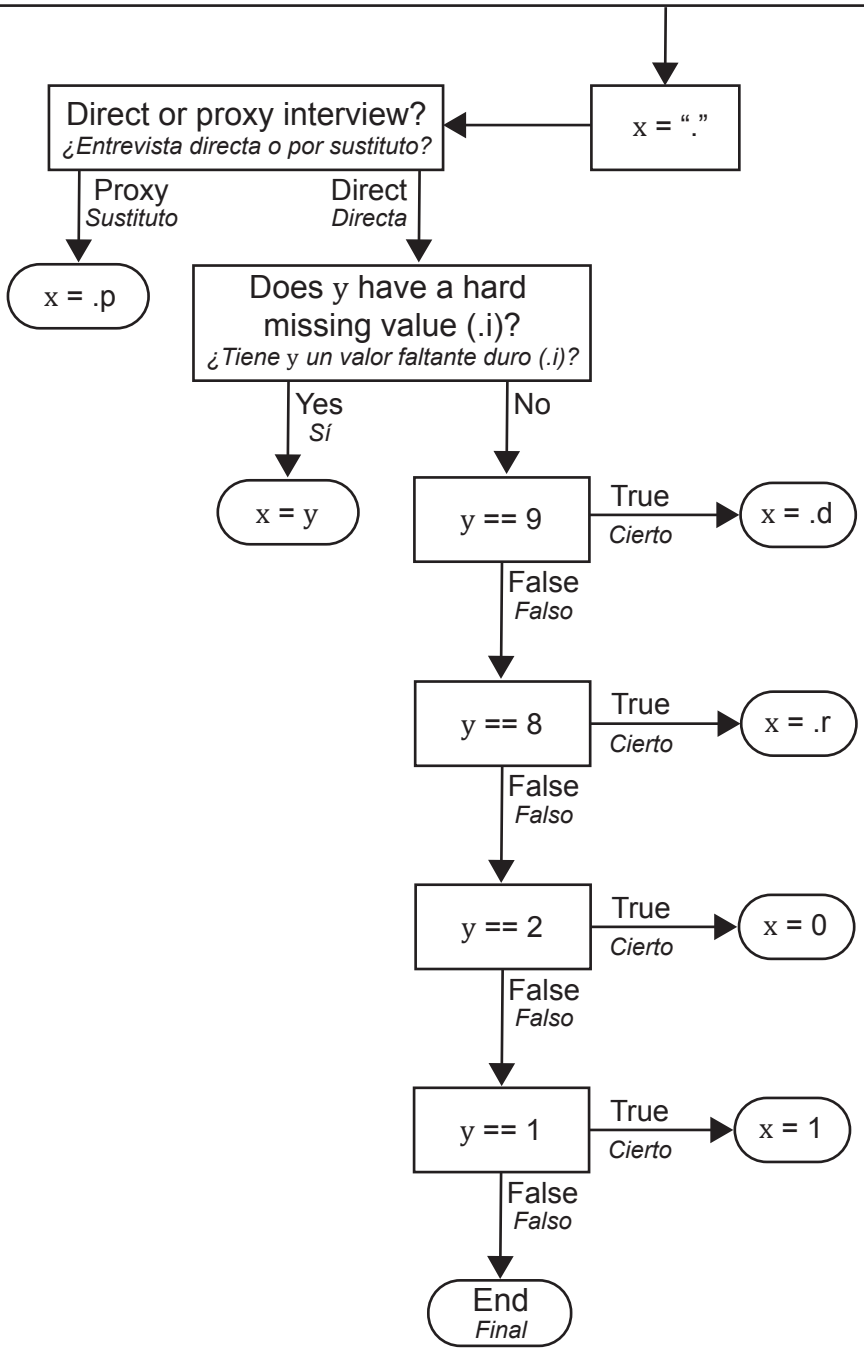
28 - 36. Construction of variables (deprimido_21, esfuerzo_21, intranquilo_21, feliz_21, solo_21, disf_vida_21, triste_21, cansado_21, energia_21) for depressive symptoms from raw data

Construcción de variables para cada síntoma depresivo a partir de variables brutas (deprimido_21, esfuerzo_21, intranquilo_21, feliz_21, solo_21, disf_vida_21, triste_21, cansado_21, energia_21)

N

Let x and y represent the variable being created and the raw variable from which the former is created, respectively.

Sea x la variable que se está creando; sea y la variable sin procesar a partir de la cual se crea la primera, respectivamente.



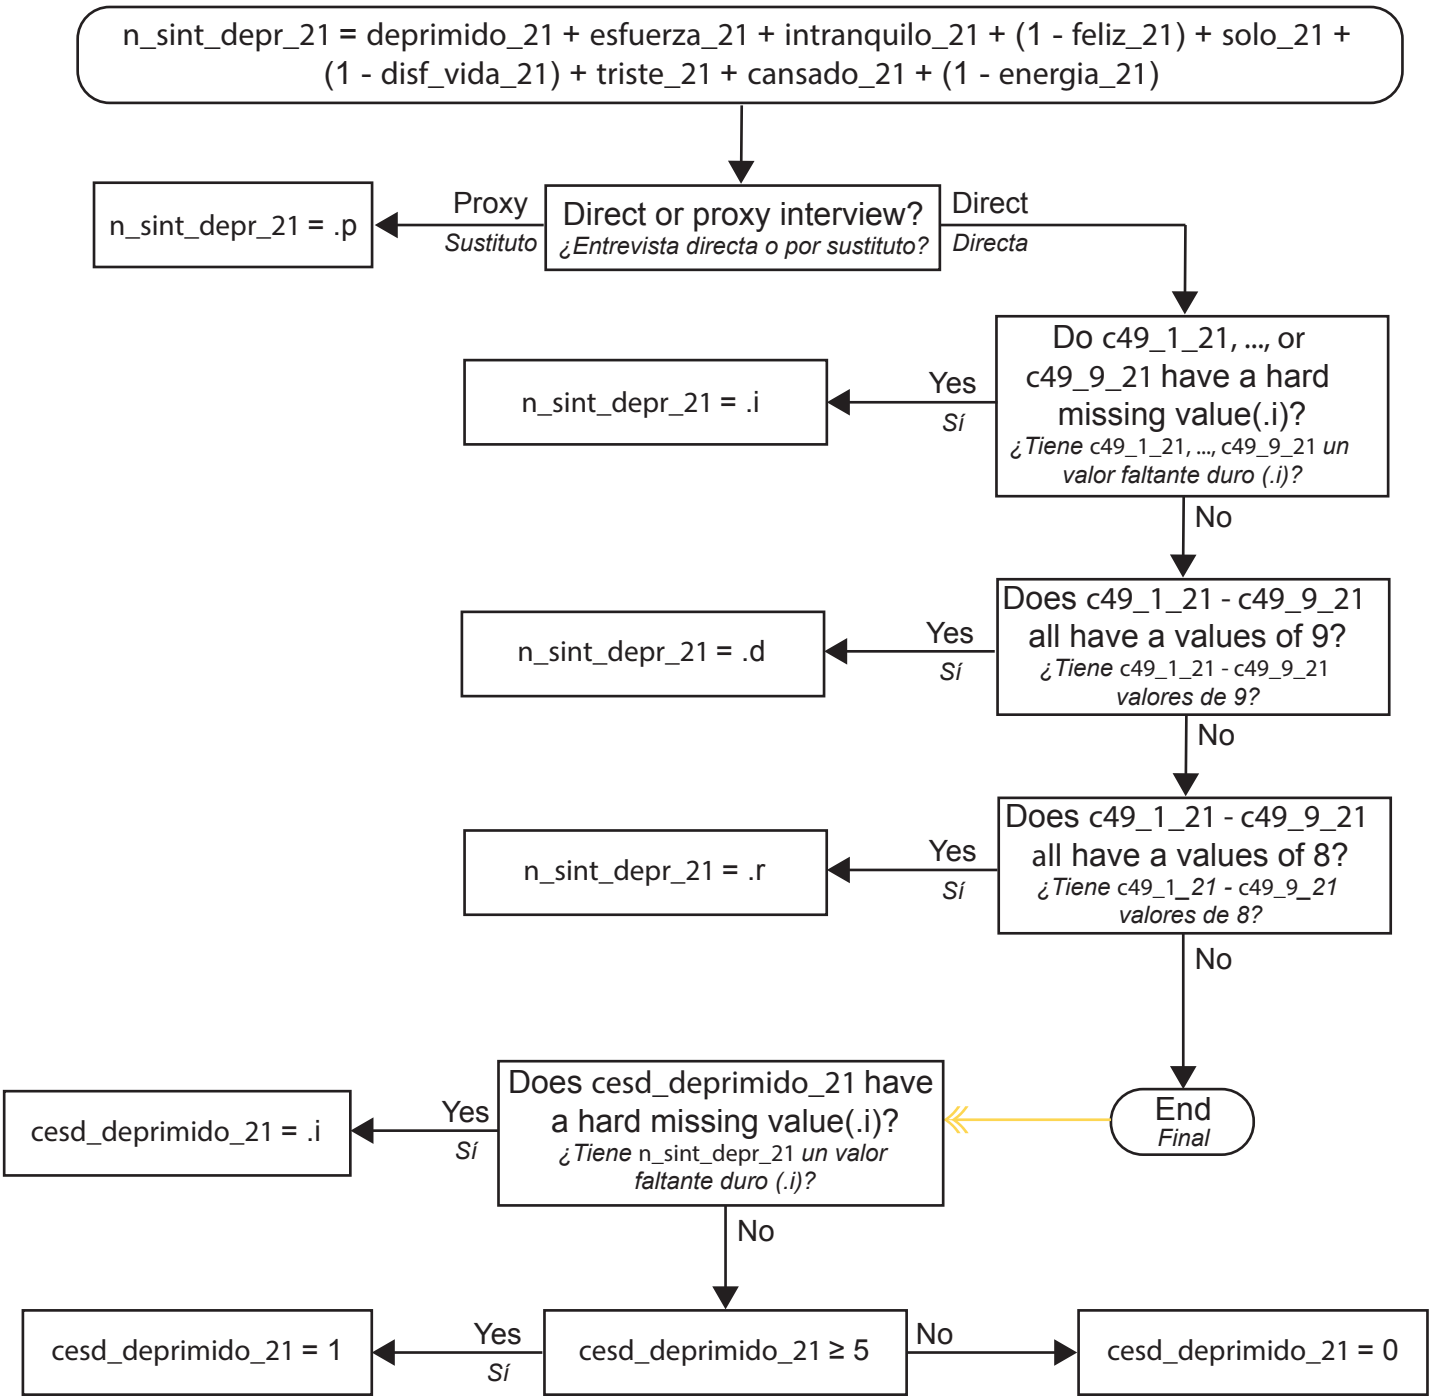
N

y is p45_1_21 - p45_9_21 when x is deprimido_21, esfuerzo_21, intranquilo_21, feliz_21, solo_21, disf_vida_21, triste_21, cansado_21, energia_21, respectively.

y es p45_1_21 - p45_9_21 *cuando* x *es* deprimido_21, esfuerzo_21, intranquilo_21, feliz_21, solo_21, disf_vida_21, triste_21, cansado_21, energia_21, *respectivamente.*

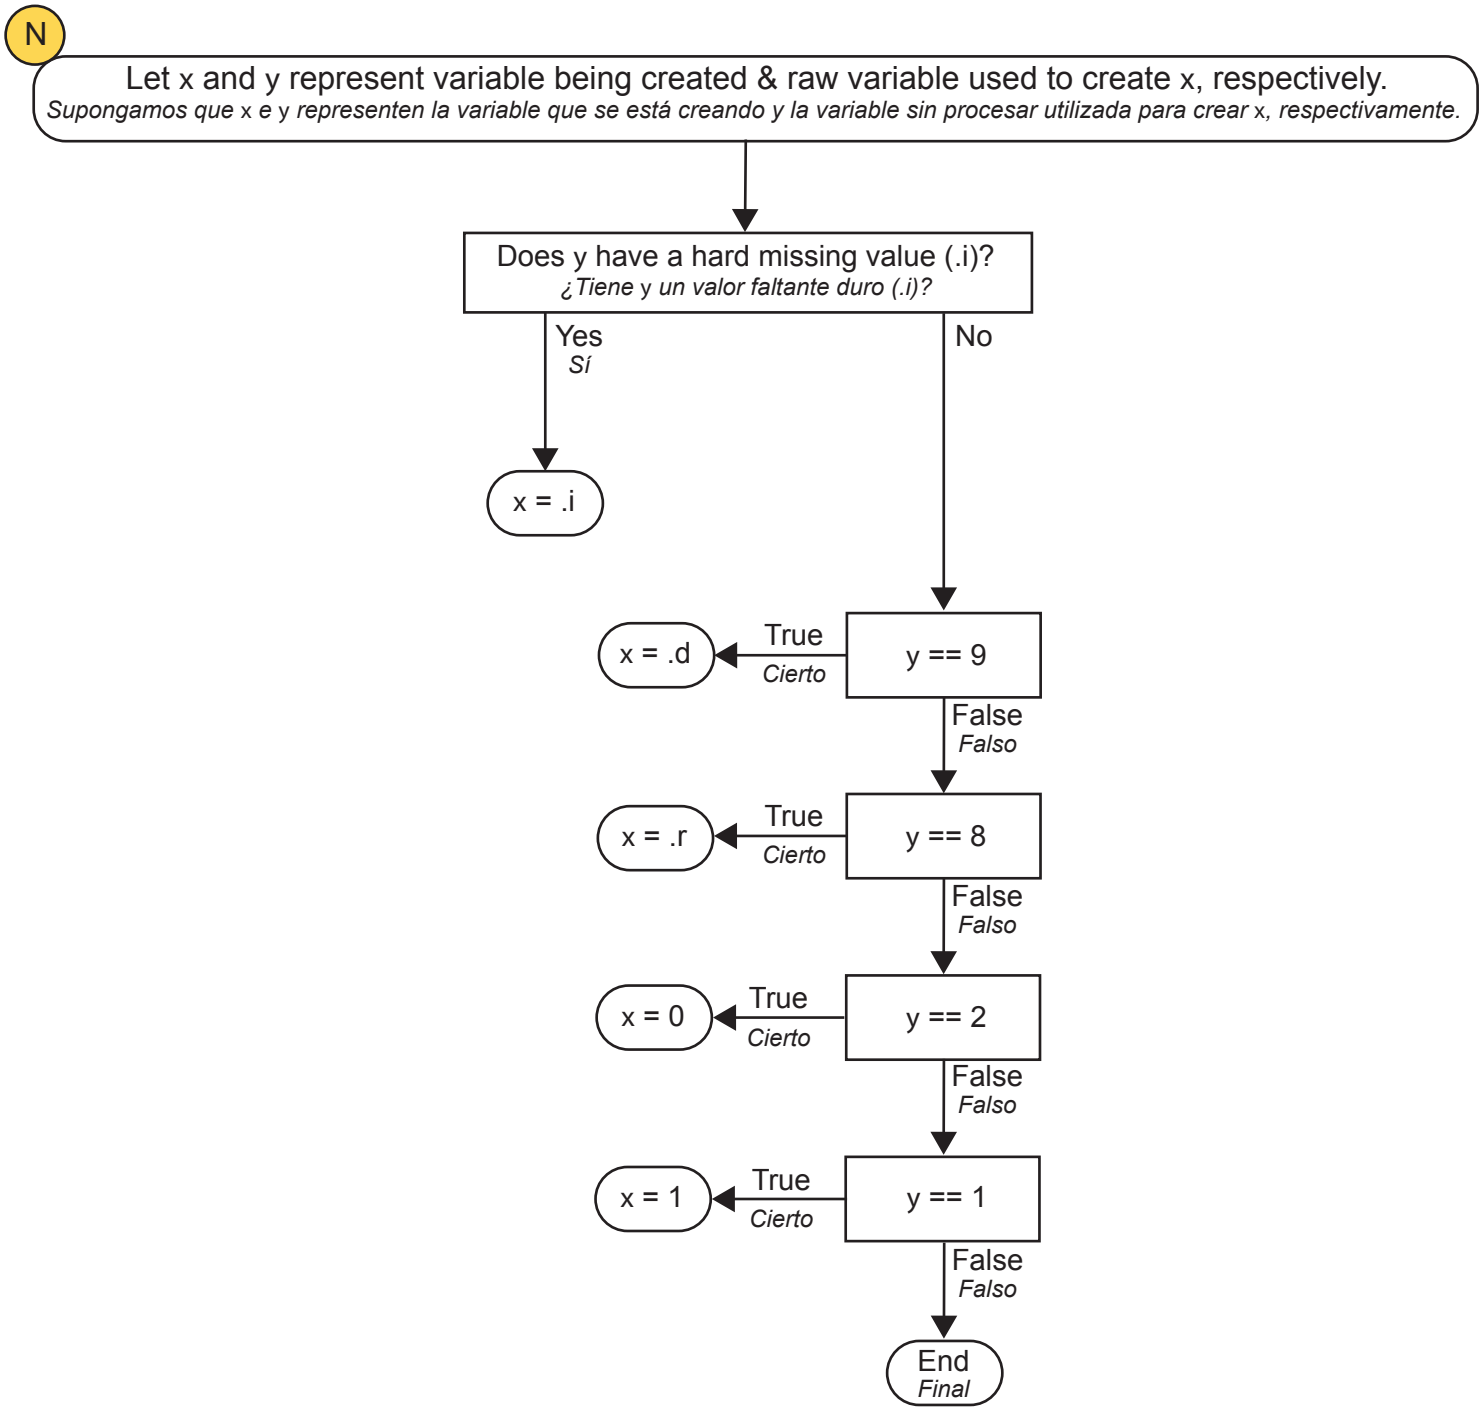
37 - 38. Construction of variables for individual depressive symptoms (n_sint_depr_21 & cesd_deprimido_21) from raw data

*Construcción de variables de síntomas depresivos individuales (*n_sint_depr_21 *y* cesd_deprimido_21*) a partir de variables brutas*



39 - 46. Construction of variables for various chronic & acute conditions (N) raw data

Construcción de variables para diversas condiciones crónicas y agudas a partir de variables brutas



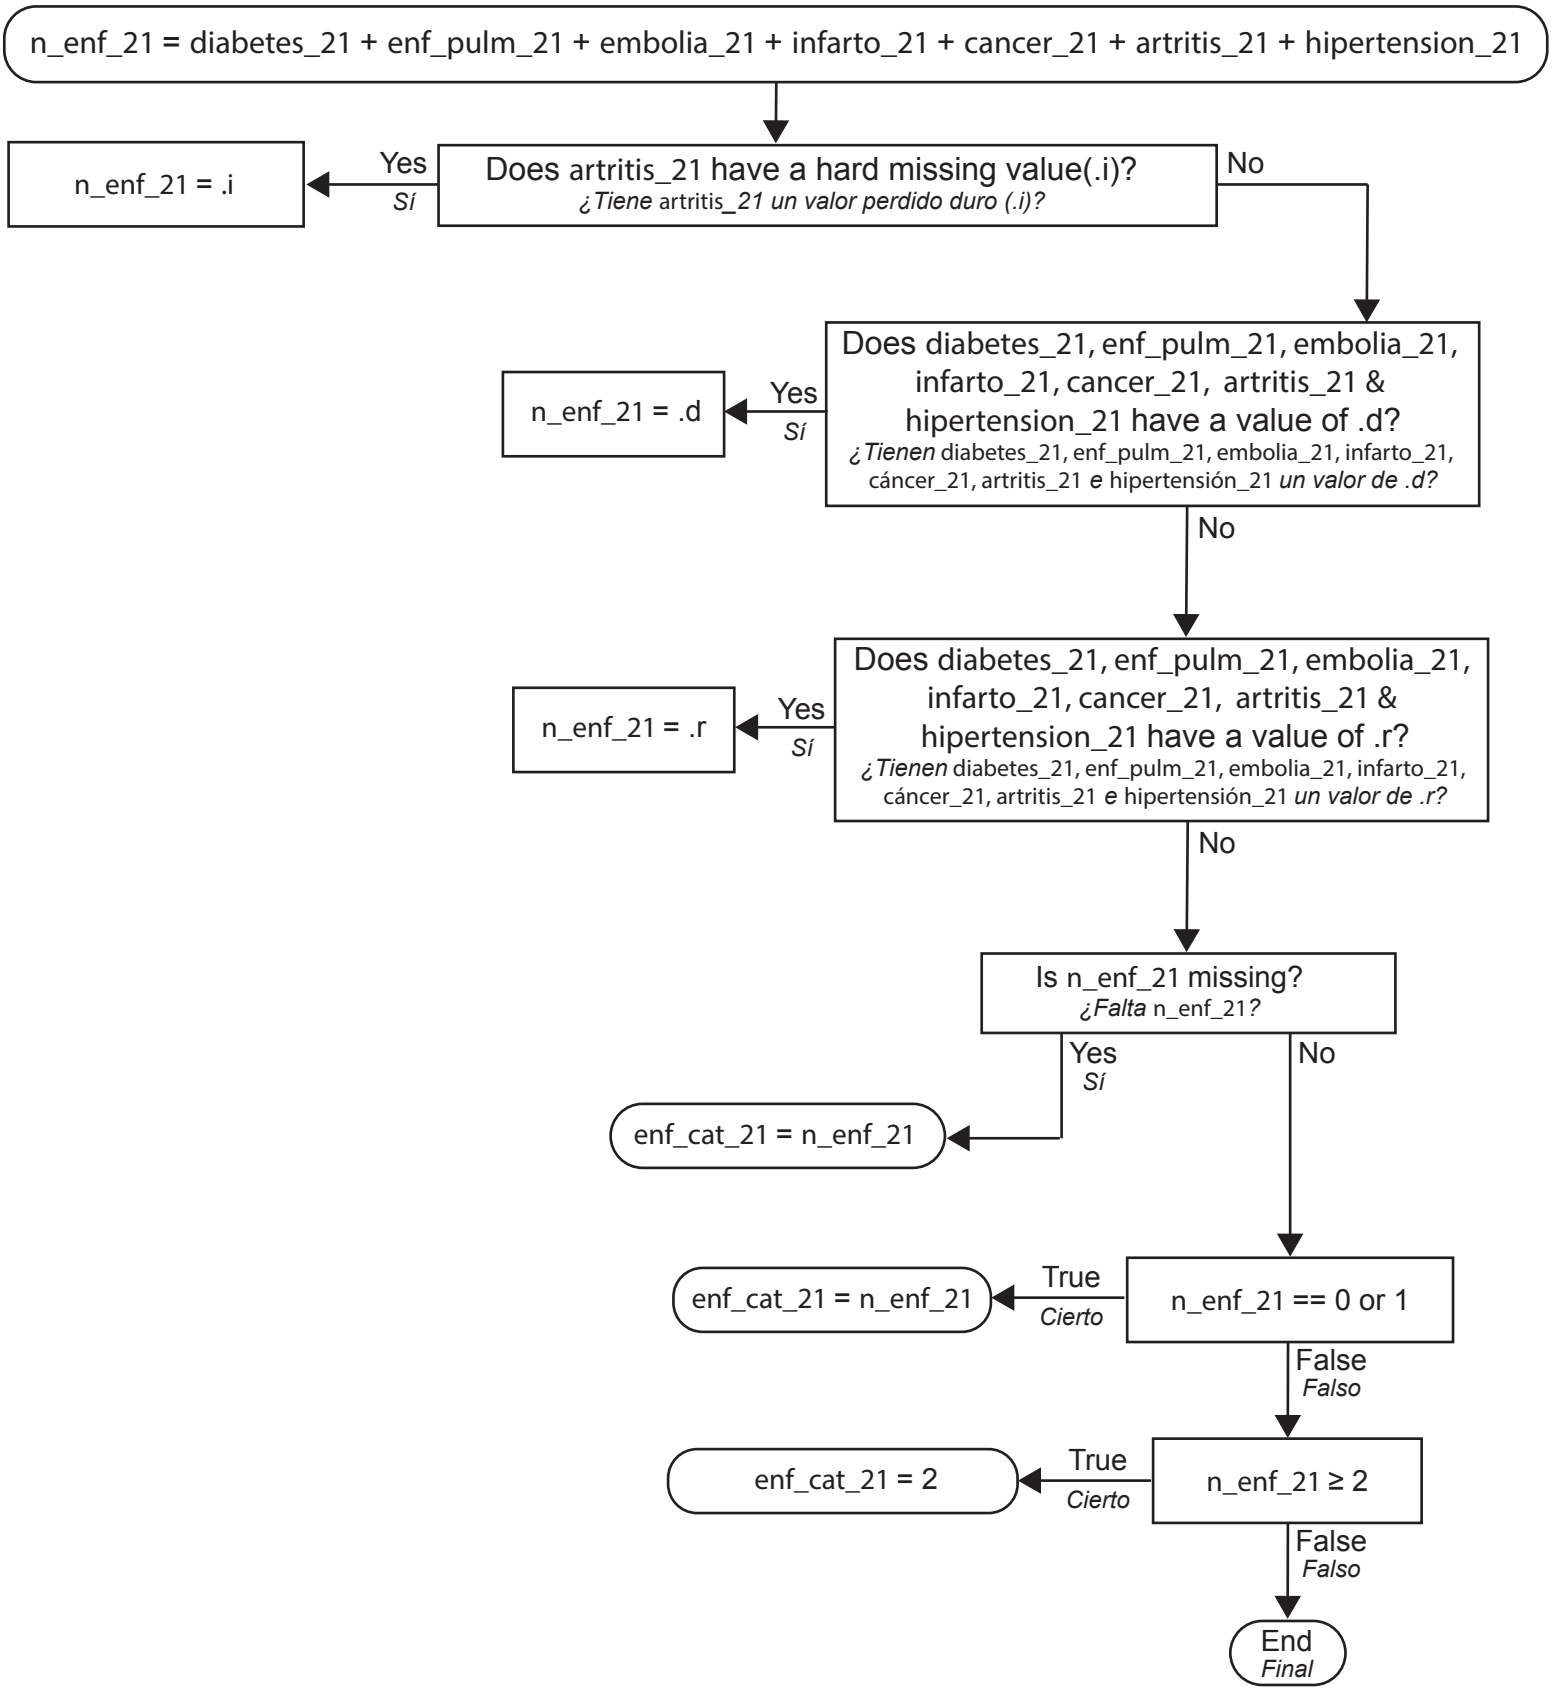
N

y is c4_21, c6_21, c12_21, c19_21, c22a_21, c25b_21, c26_21 & c32_21 when x is hipertension_21, diabetes_21, cancer_21, enf_pulm_21, infarto_21, prob_card_21, embolia_21 & artritis_21, respectively.

y es c4_21, c6_21, c12_21, c19_21, c22a_21, c25b_21, c26_21 *y* c32_21 *cuando* x *es* hipetensión_21, diabetes_21, cancer_21, enf_pulm_21, infarto_21, prob_card_21, embolia_21 *y* artritis_21, *respectivamente.*

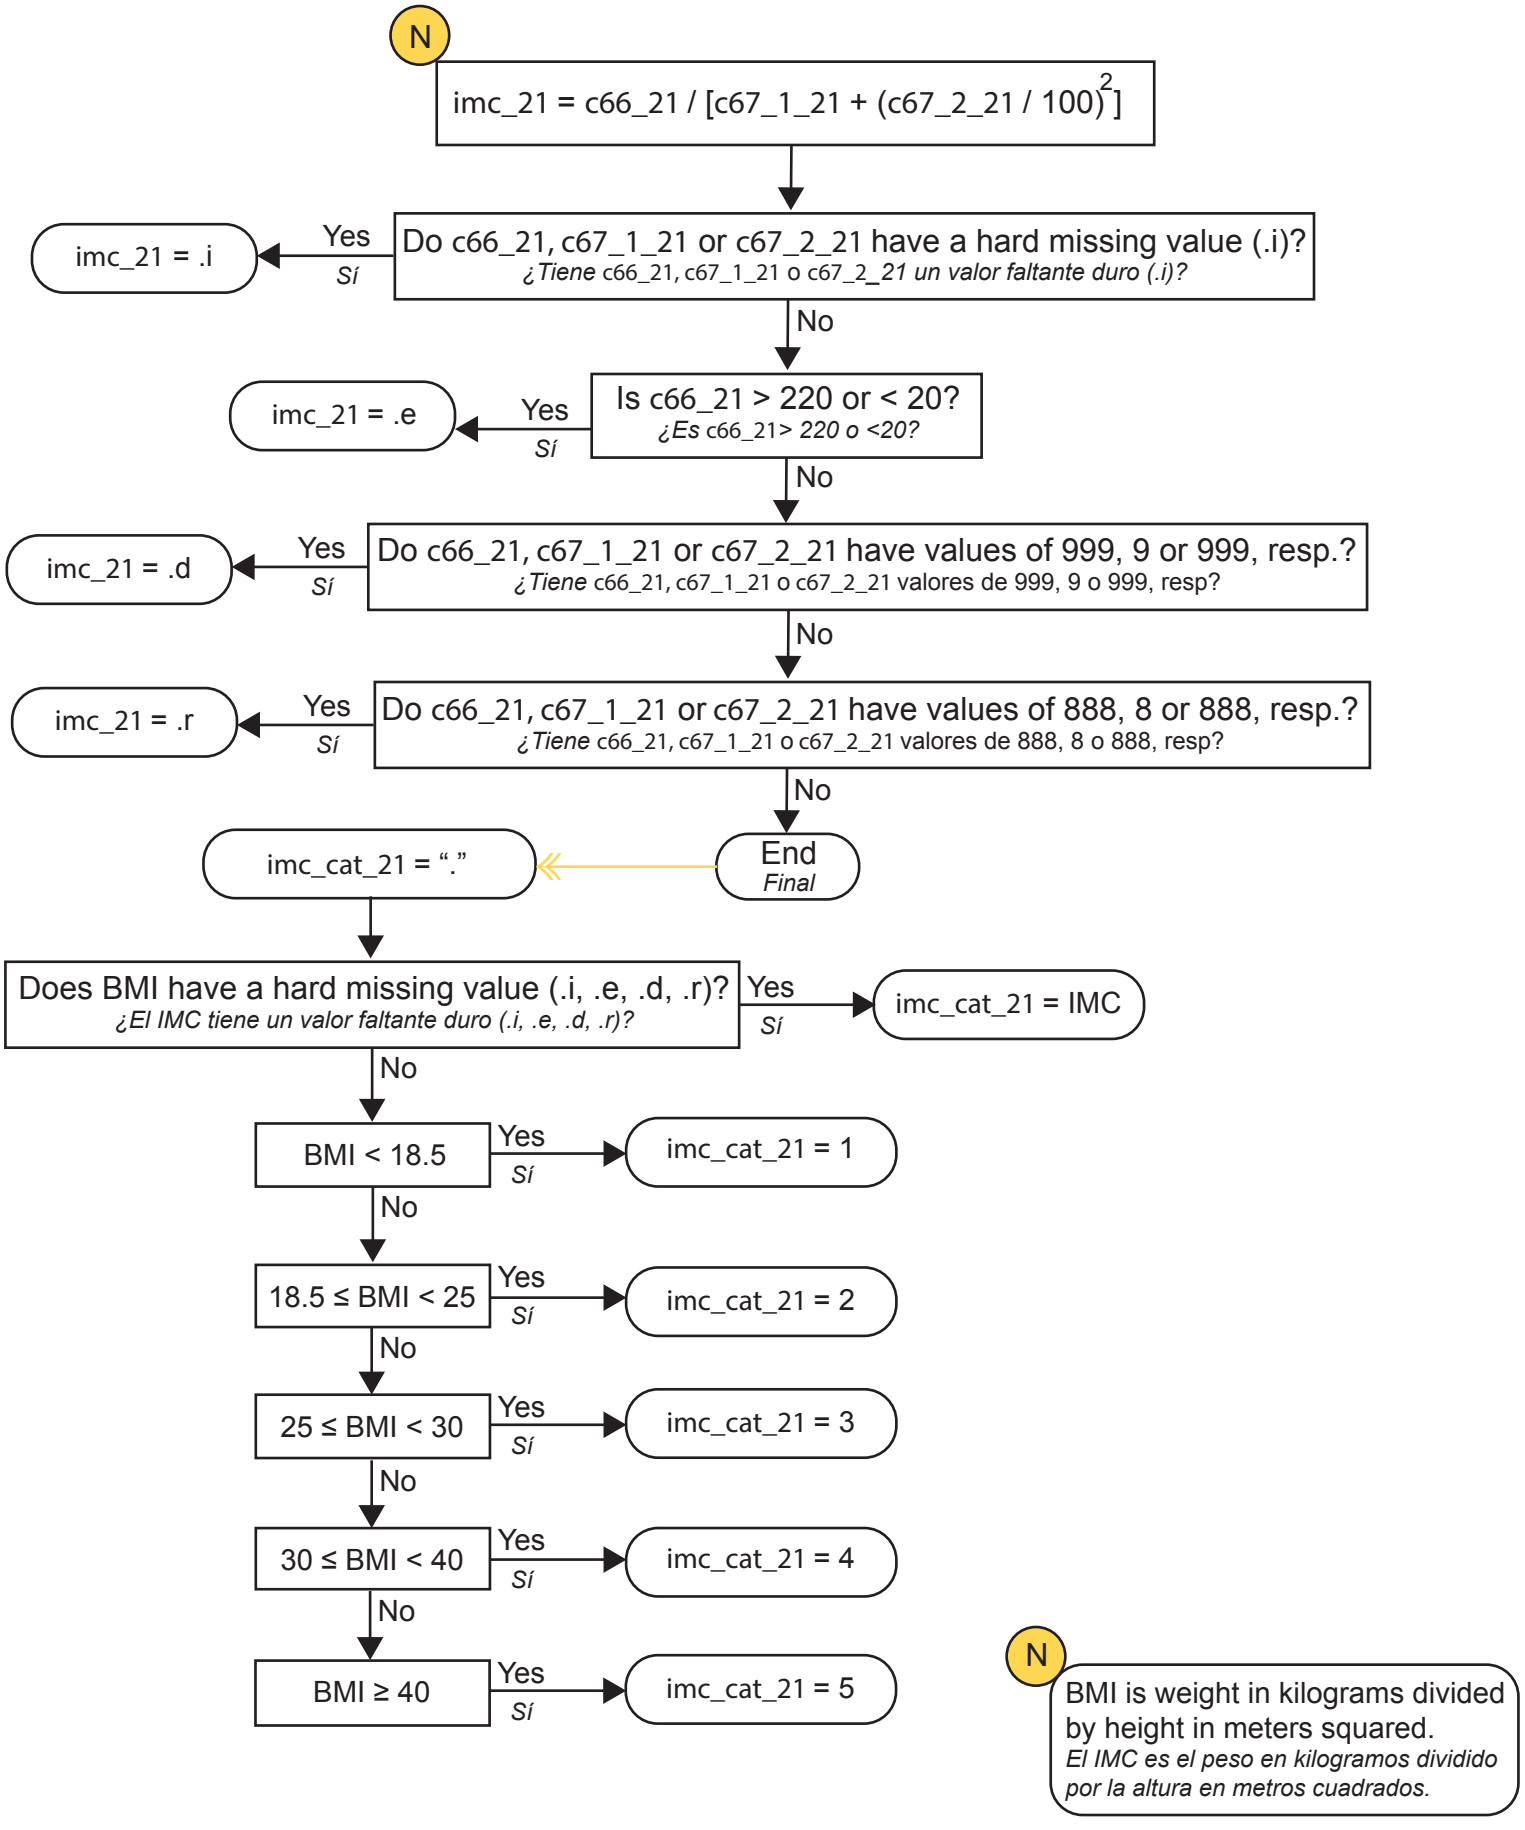
47 - 48. Construction of numeric variable indicating number of chronic and acute conditions (n_enf_21) from raw data

*Construcción de variables categóricas que indican el número de afecciones crónicas y agudas (*n_enf_21*) a partir de variables brutas*



49. Construction of Body Mass Index categorical variable (imc_cat_21) from raw data

*Construcción de variable categorica de Indice de Masa Corporal (*imc_cat_21*) a partir de variables brutas*



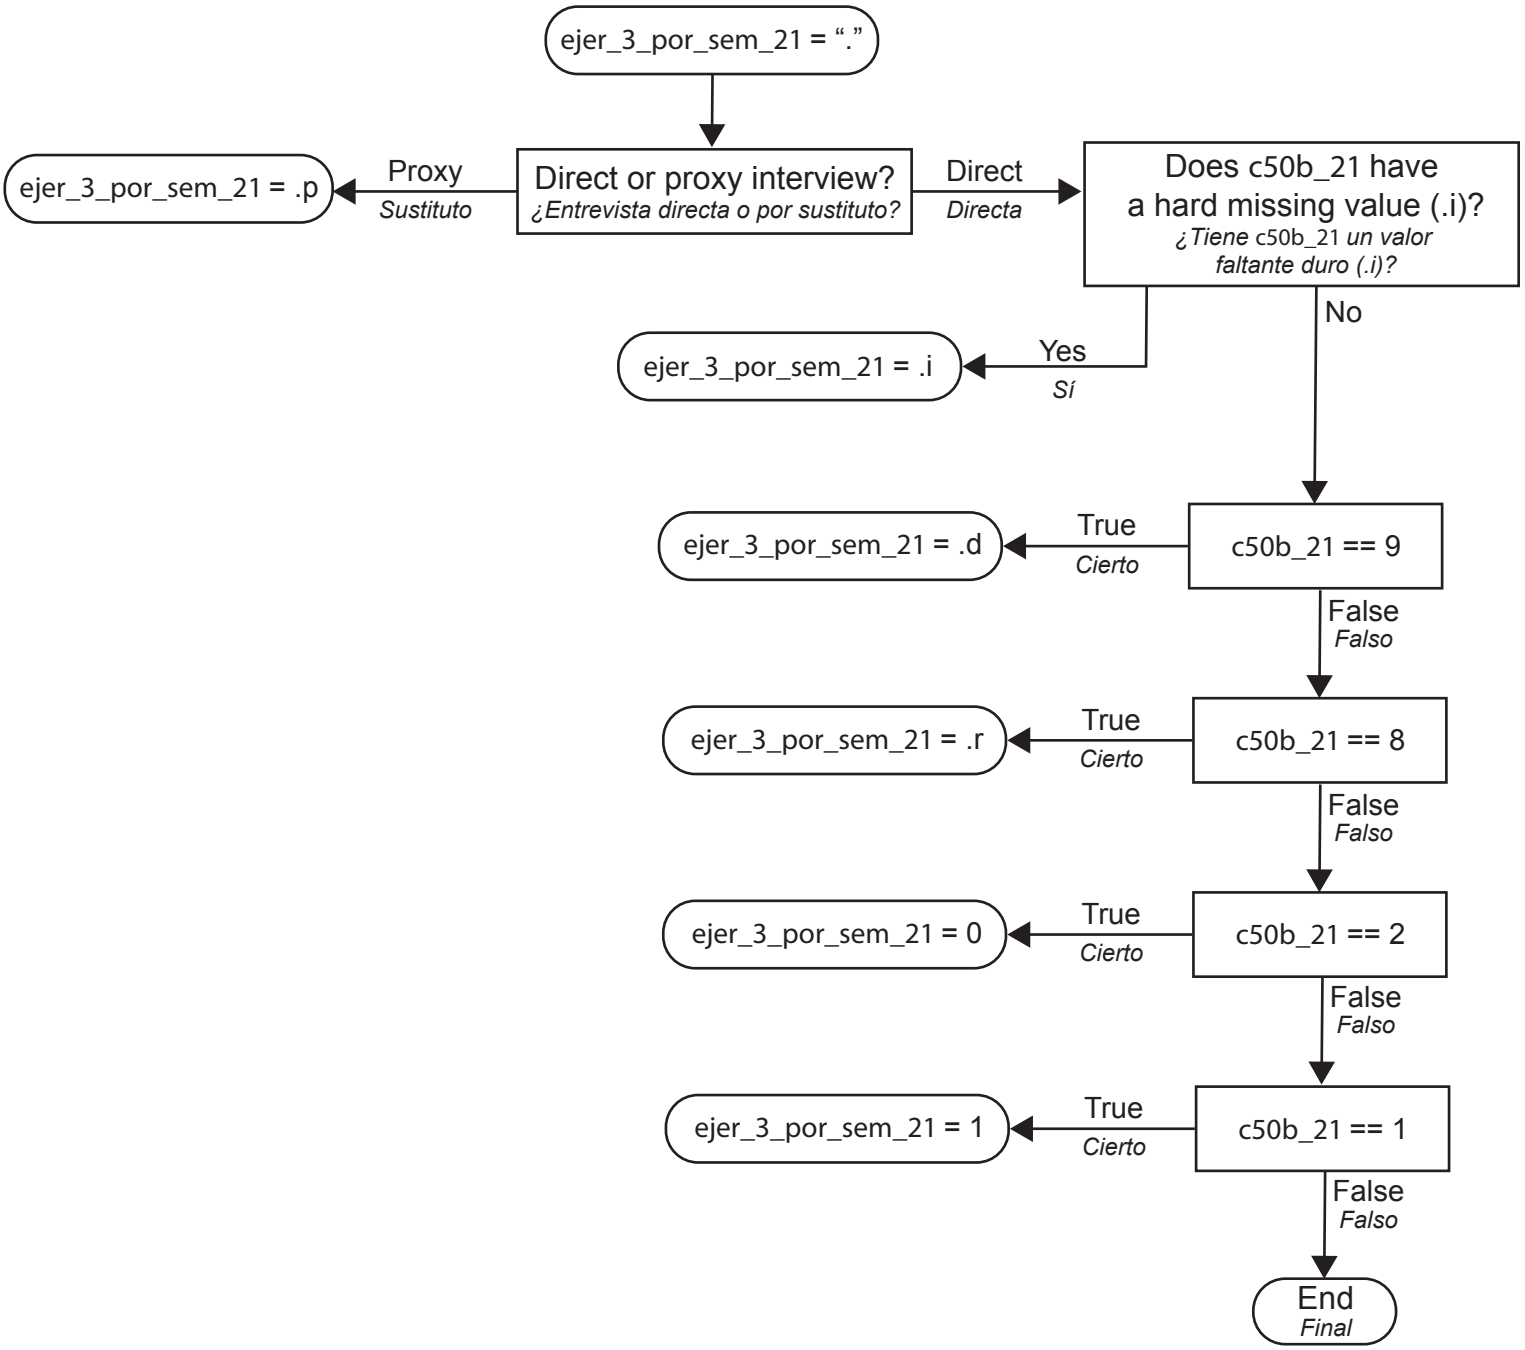
N

BMI is weight in kilograms divided by height in meters squared.

El IMC es el peso en kilogramos dividido por la altura en metros cuadrados.

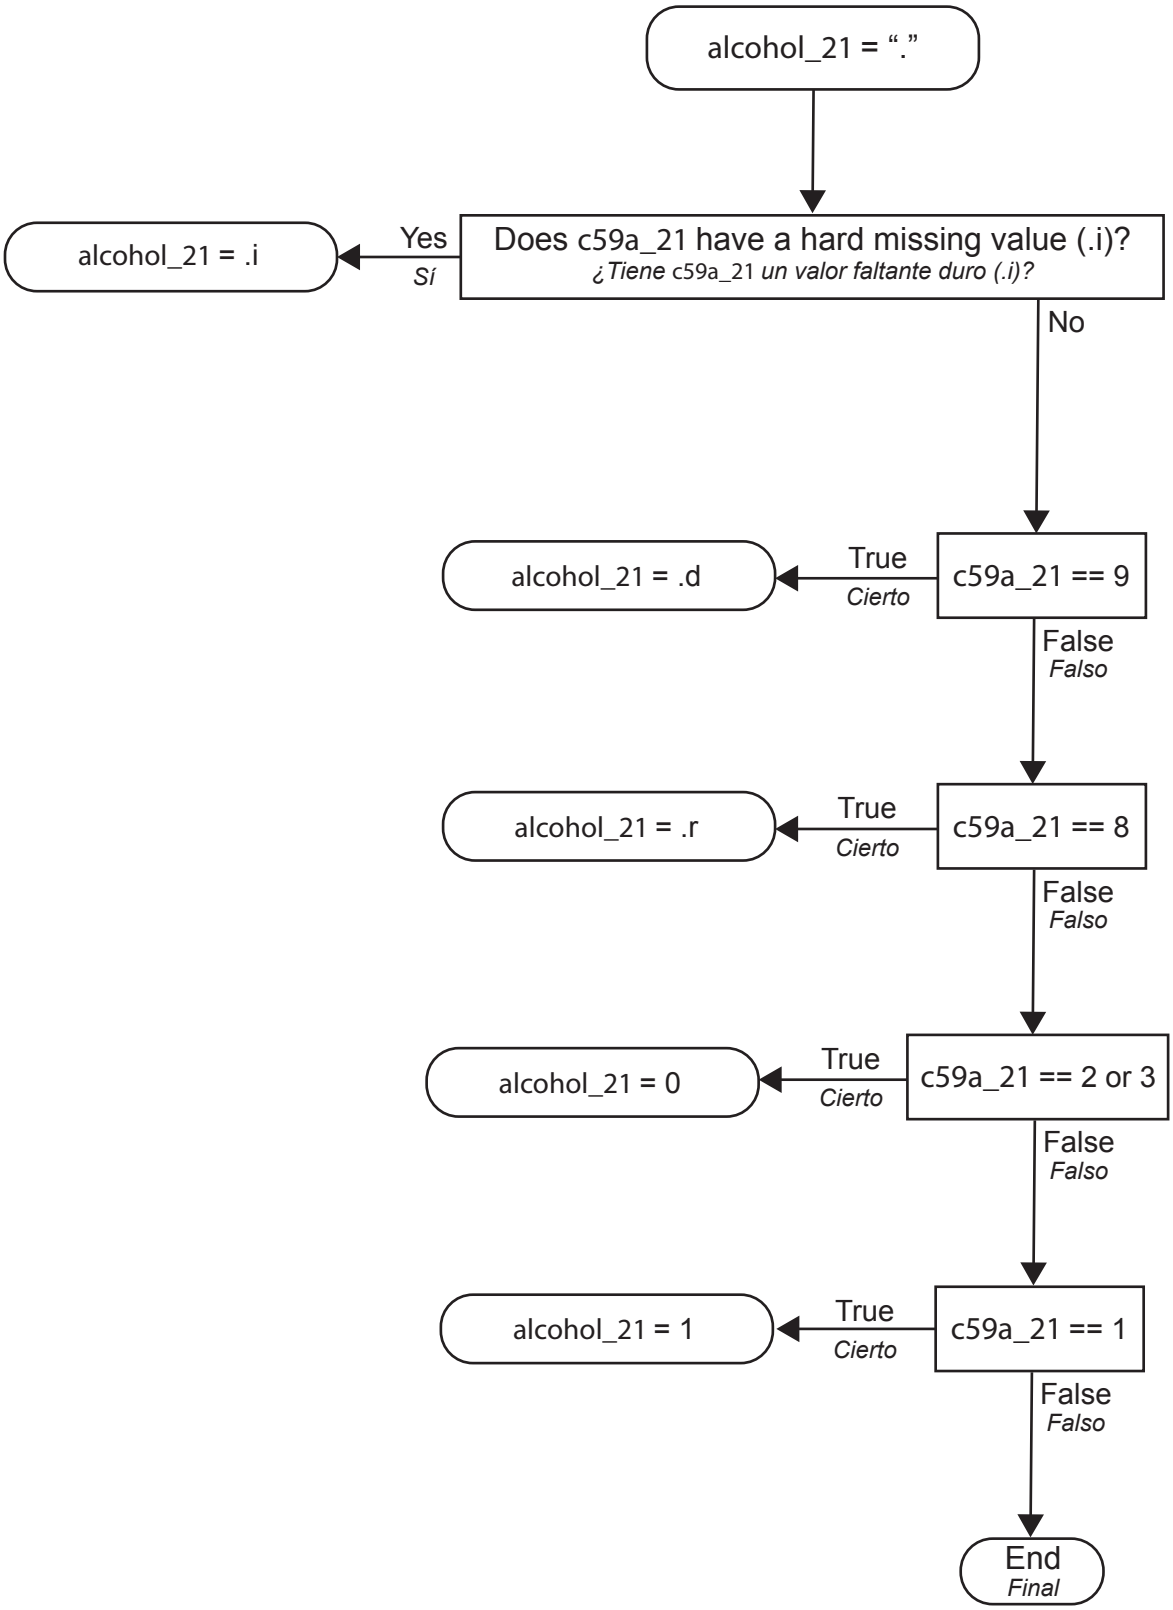
50. Construction of physical activity 3 or more times per week (ejer_3_por_sem_21) from raw data

Construcción de actividad fisica 3 o mas veces por semana (ejer_3_por_sem_21) *a partir de variables brutas*



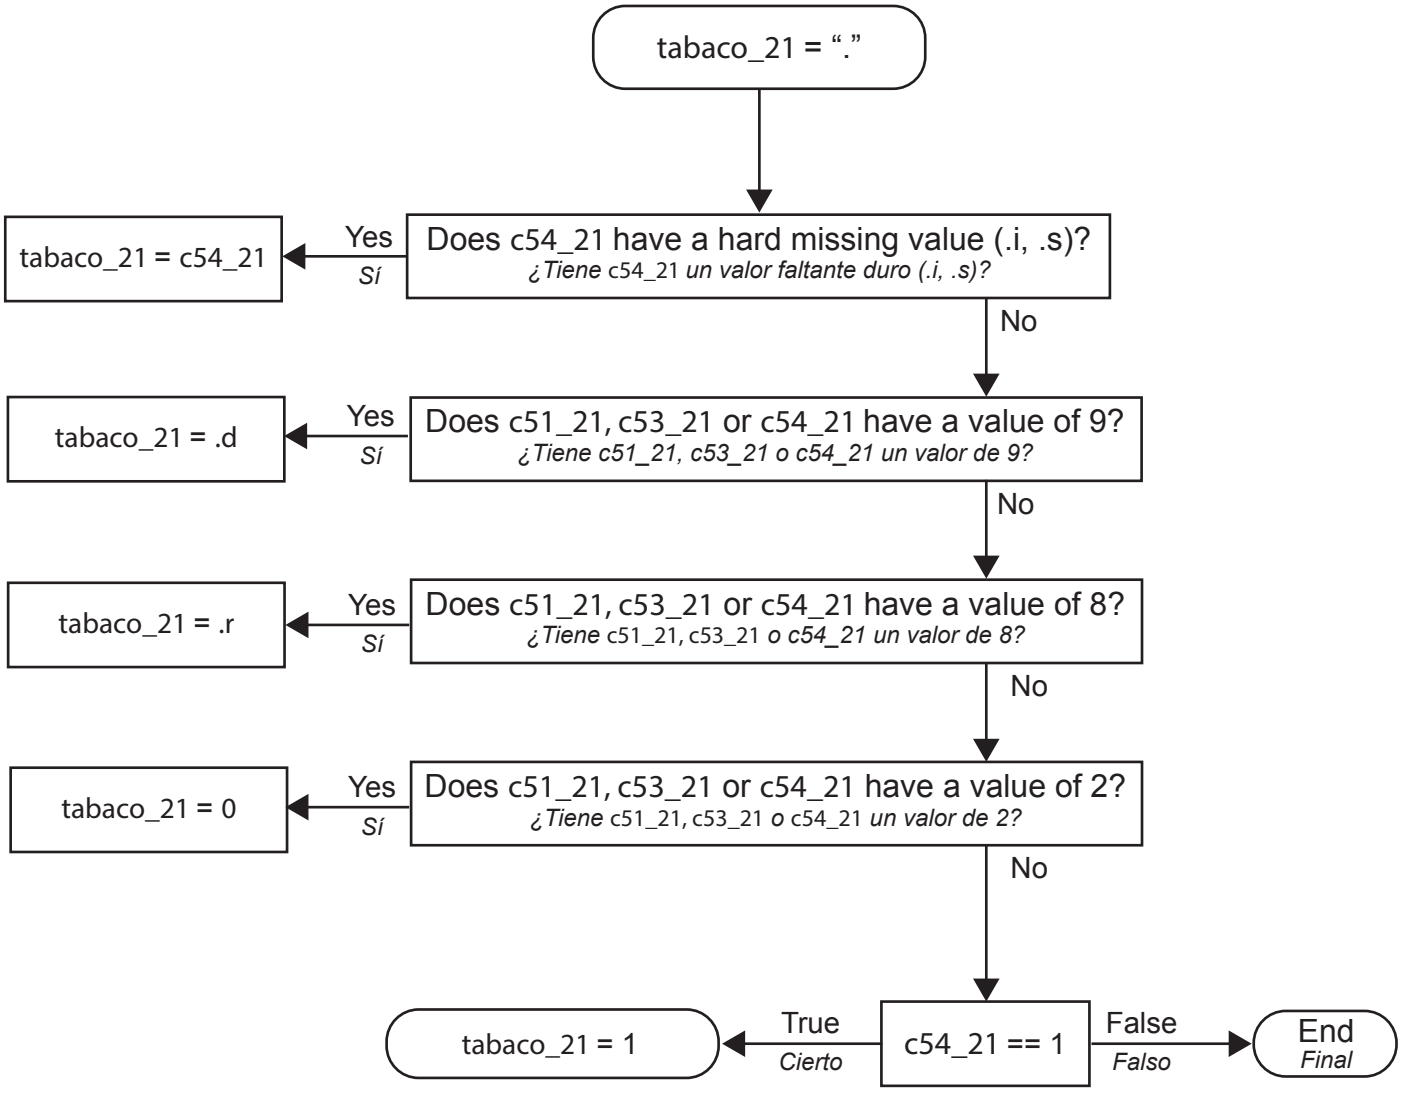
51. Construction of variable indicating if respondent currently drink alcohol (alcohol_21) from raw data

*Construcción de variable que indica si el individuo actualmente consume bebidas alcoholicas (*alcohol_21*) a partir de variables brutas*



52. Construction of variable indicating if respondent currently smokes (tabaco_21) from raw data

*Construcción de variable que indica si el individuo actualmente fume (*tabaco_21*) a partir de variables brutas*

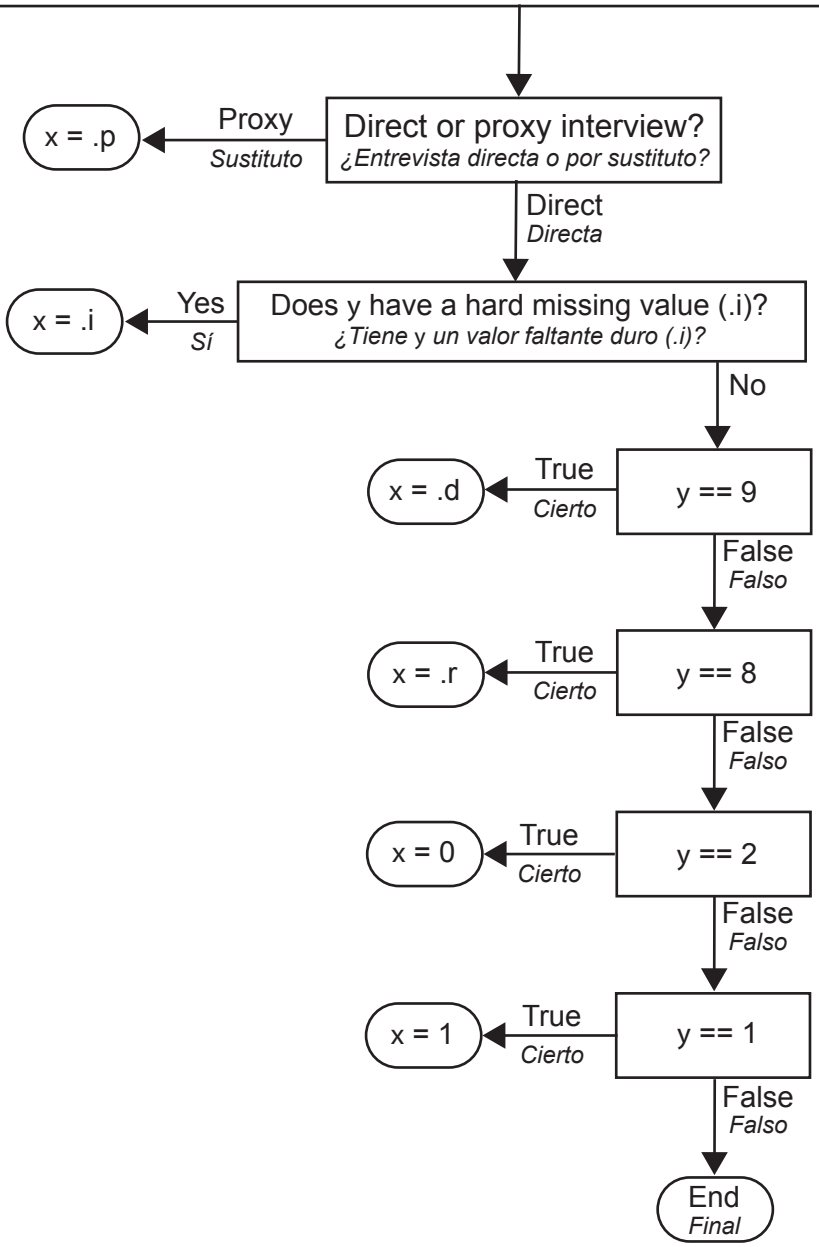


53 - 60. Construction of variables indicating whether each respondent underwent several preventative care measures[N] that apply to any sex in the past two years

Construcción de variables que indican si cada individuo se sometió a varios medidas de cuidado preventivo que se aplican a cualquier sexo en los últimos dos años

N

Let x and y represent the variable being created & raw variable used to create x, respectively.
Supongamos que x *e* y *representen la variable que se está creando y la variable bruta utilizada para crear* x, *respectivamente.*

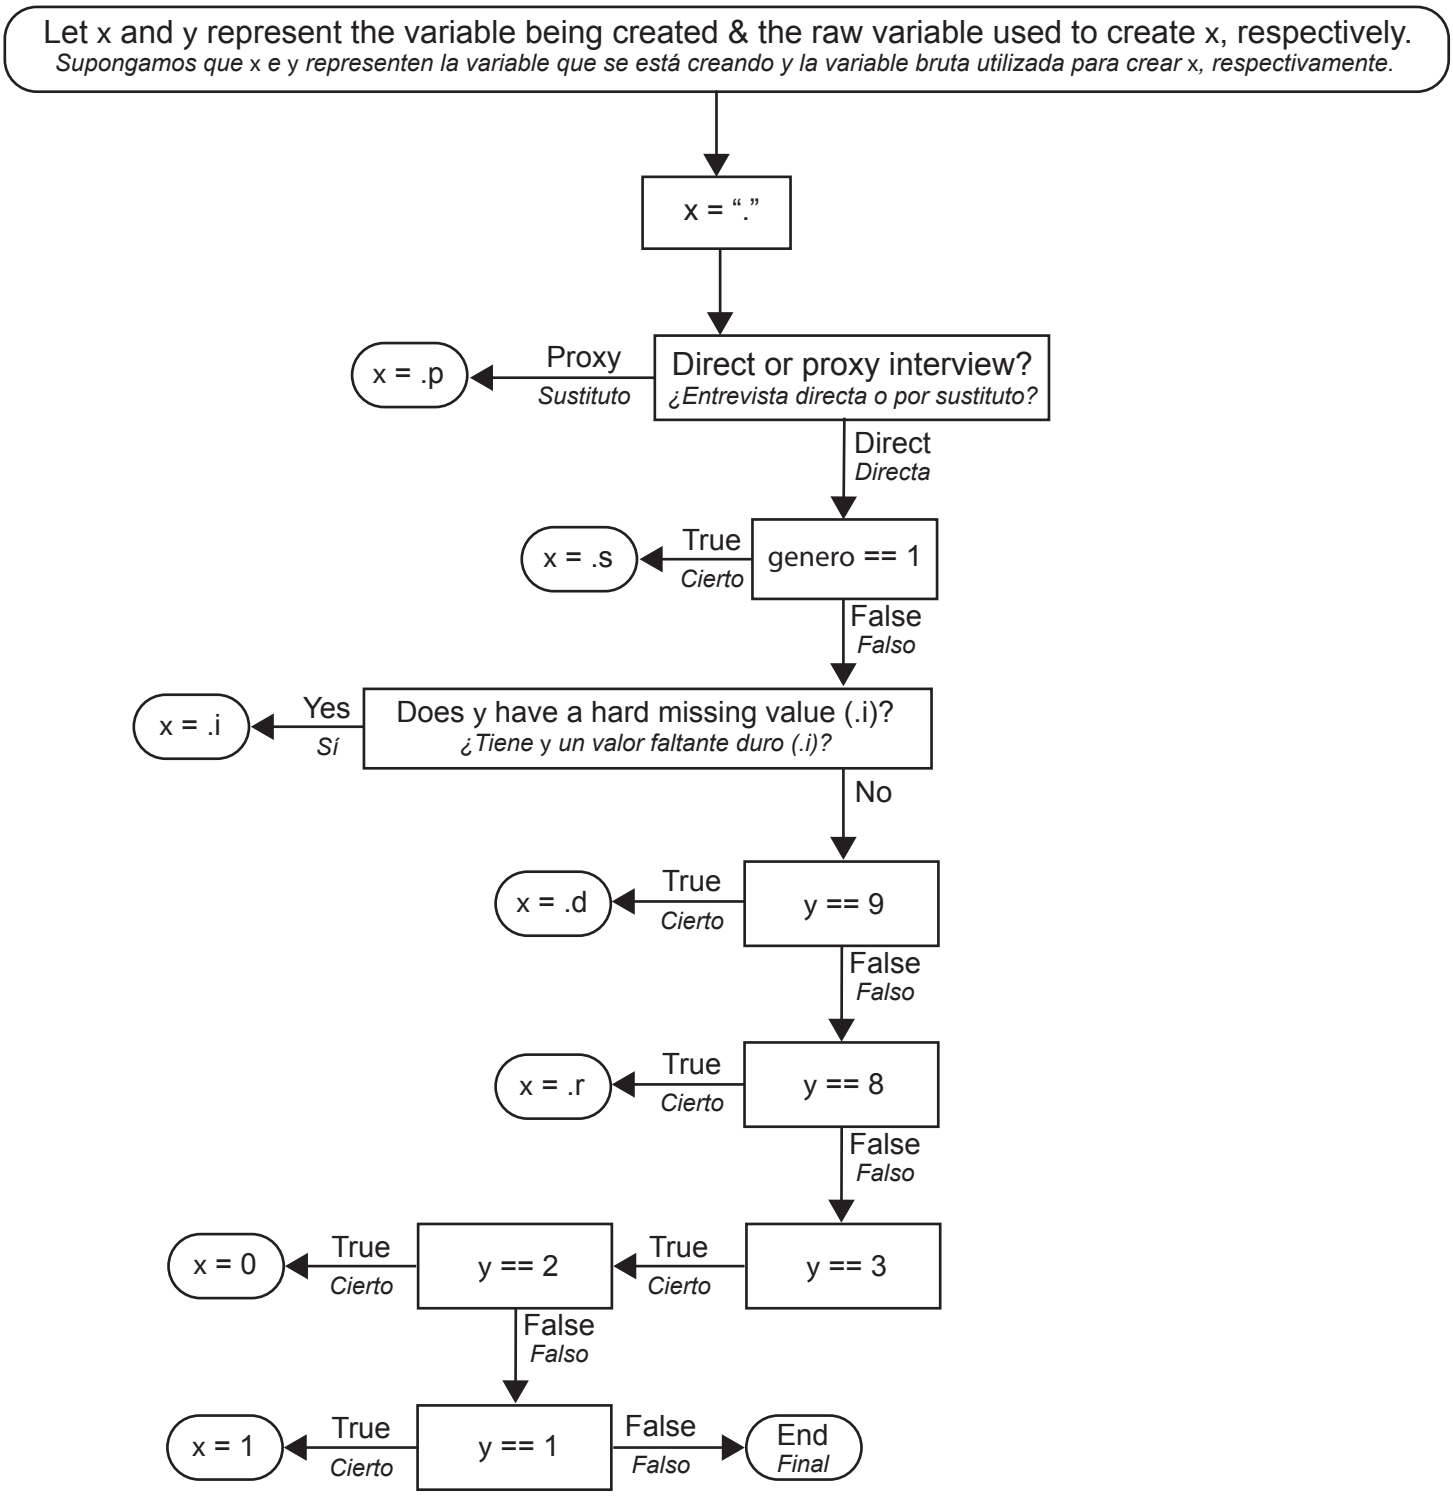


N

y is c48a_21 - c48g_1_21 when x is prueba_colon_21, mide_col_21, prueba_tuber_21, prueba_diab_21, prueba_pres_21, vacu_gripa_21, vacu_neumo_21, and vacu_covid_21, respectively.
These questions were asked to all subjects with disregards to their gender.
y *es* c48a_21 - c48g_1_21 *cuando* x *es* prueba_colon_21, mide_col_21, prueba_tuber_21, prueba_diab_21, prueba_pres_21, vacu_gripa_21,vacu_neumo_21, *y* vacu_covid_21, *respectivamente.*
Estas preguntas fueron hechas a todos los sujetos sin distincción de género.

61 - 63. Construction of variables indicating preventative care measures specific for women (auto_exam_mama_21, mamografia_21, and papanic_21) from raw data

*Construcción de variables que indican medidas de cuidado preventivo especifico para mujeres (*auto_exam_21, mamografia_21 y papanic_21*) a partir de variables brutas*



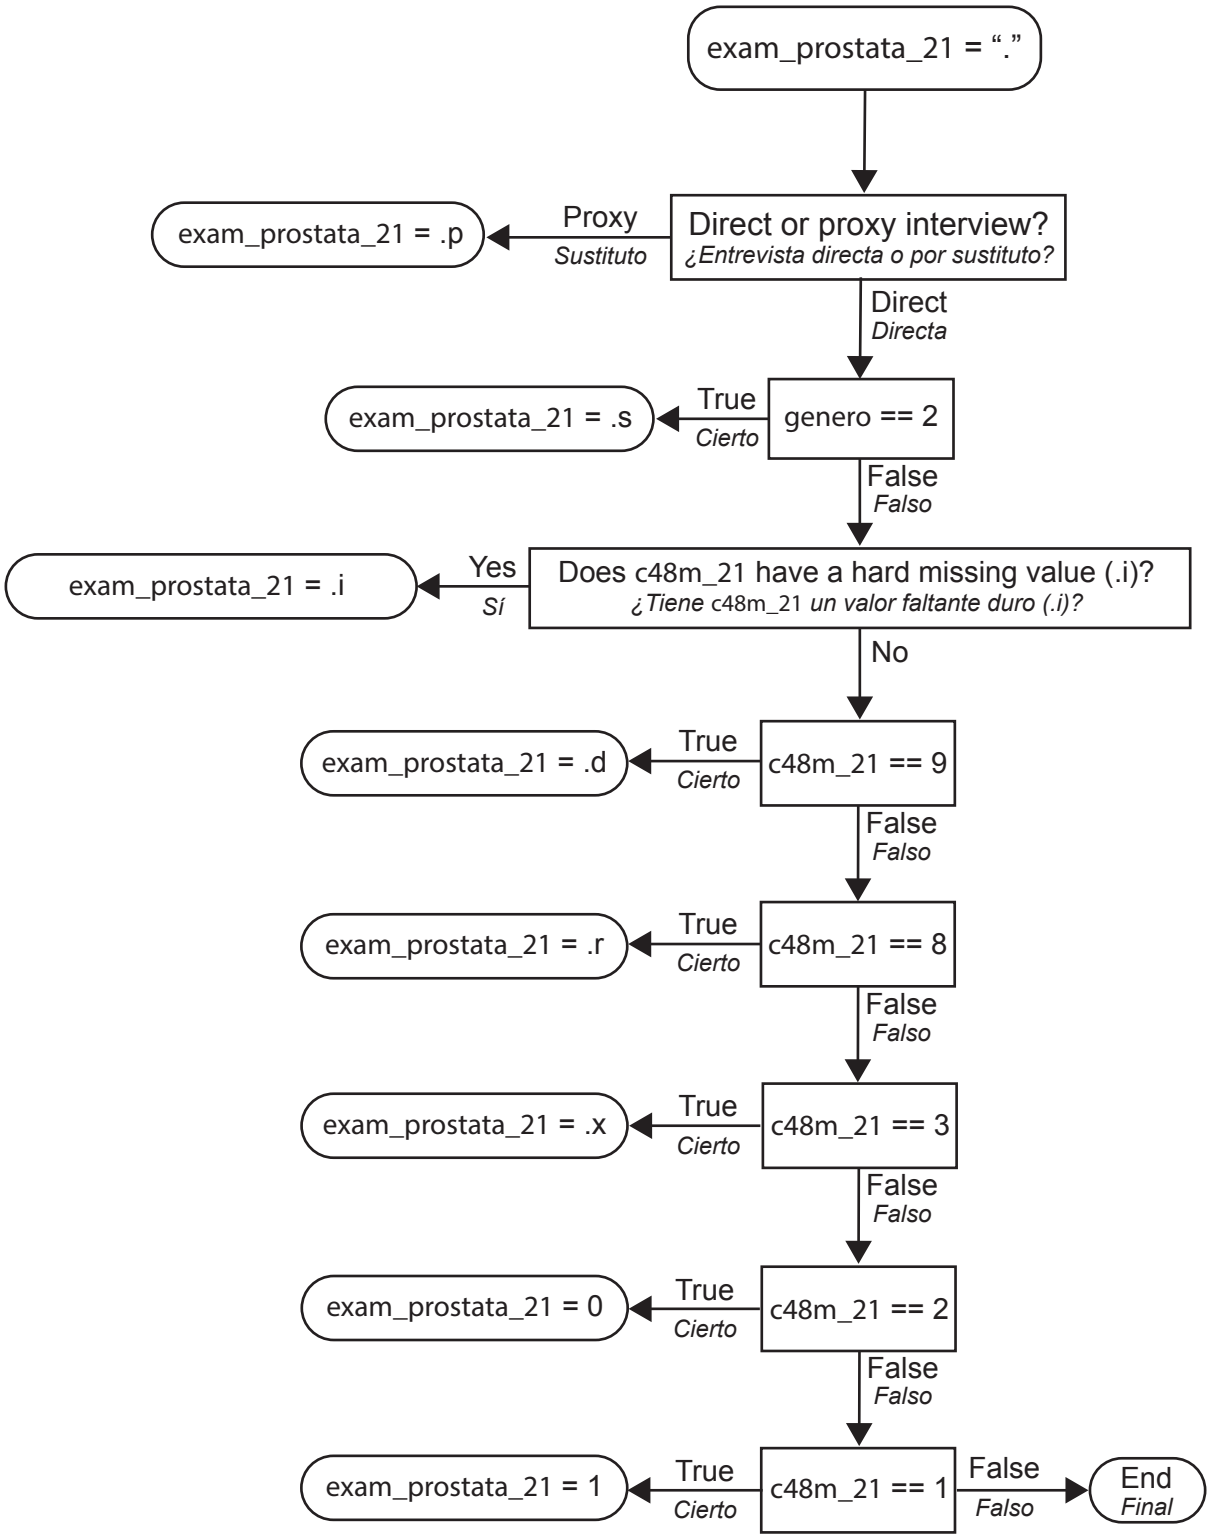
N

y is c48h_21, c48i_21, c48j_21 when x is auto_exam_mama_21, mamografia_21, papanic_21, respectively. These questions were asked to all subjects with disregards to their gender.

y *es* c48h_21, c48i_21 ,c48j_21 *cuando* x *es* auto_exam_mama_21, mamografia_21, papanic_21, *respectivamente. Estas preguntas fueron hechas a todos los sujetos sin distinción de género.*

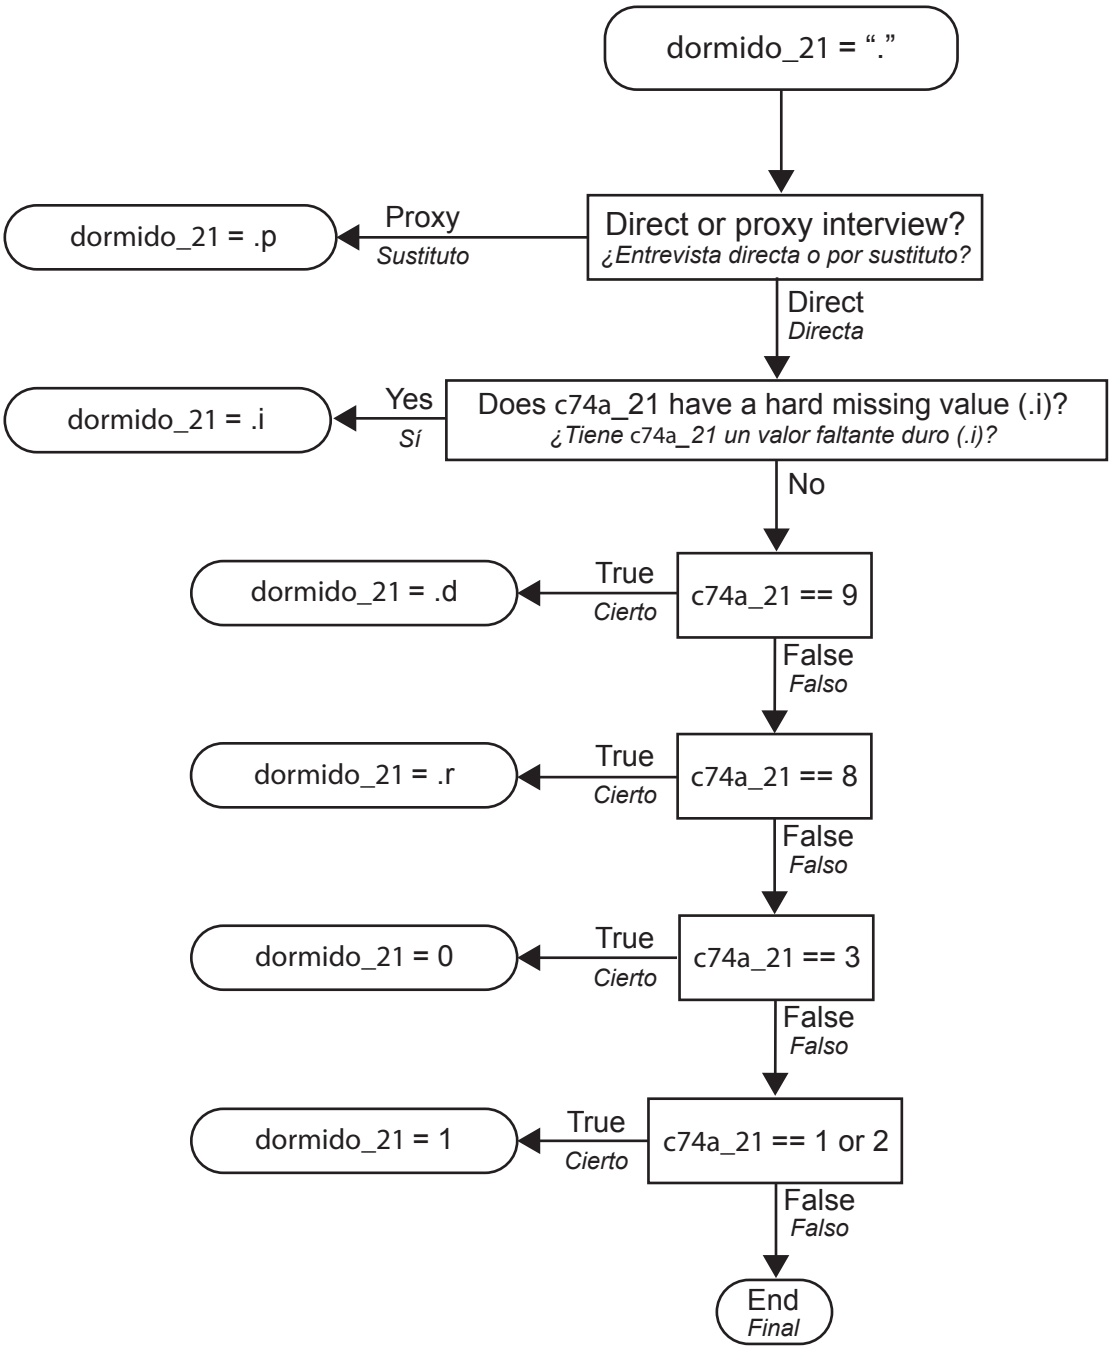
64. Construction of variables indicating preventative care measures specific for men (exam_prostata_21) from raw data

*Construcción de variable que indican medidas de cuidado preventivo especifica para hombres (*exam_prostata_21*) a partir de variables brutas*



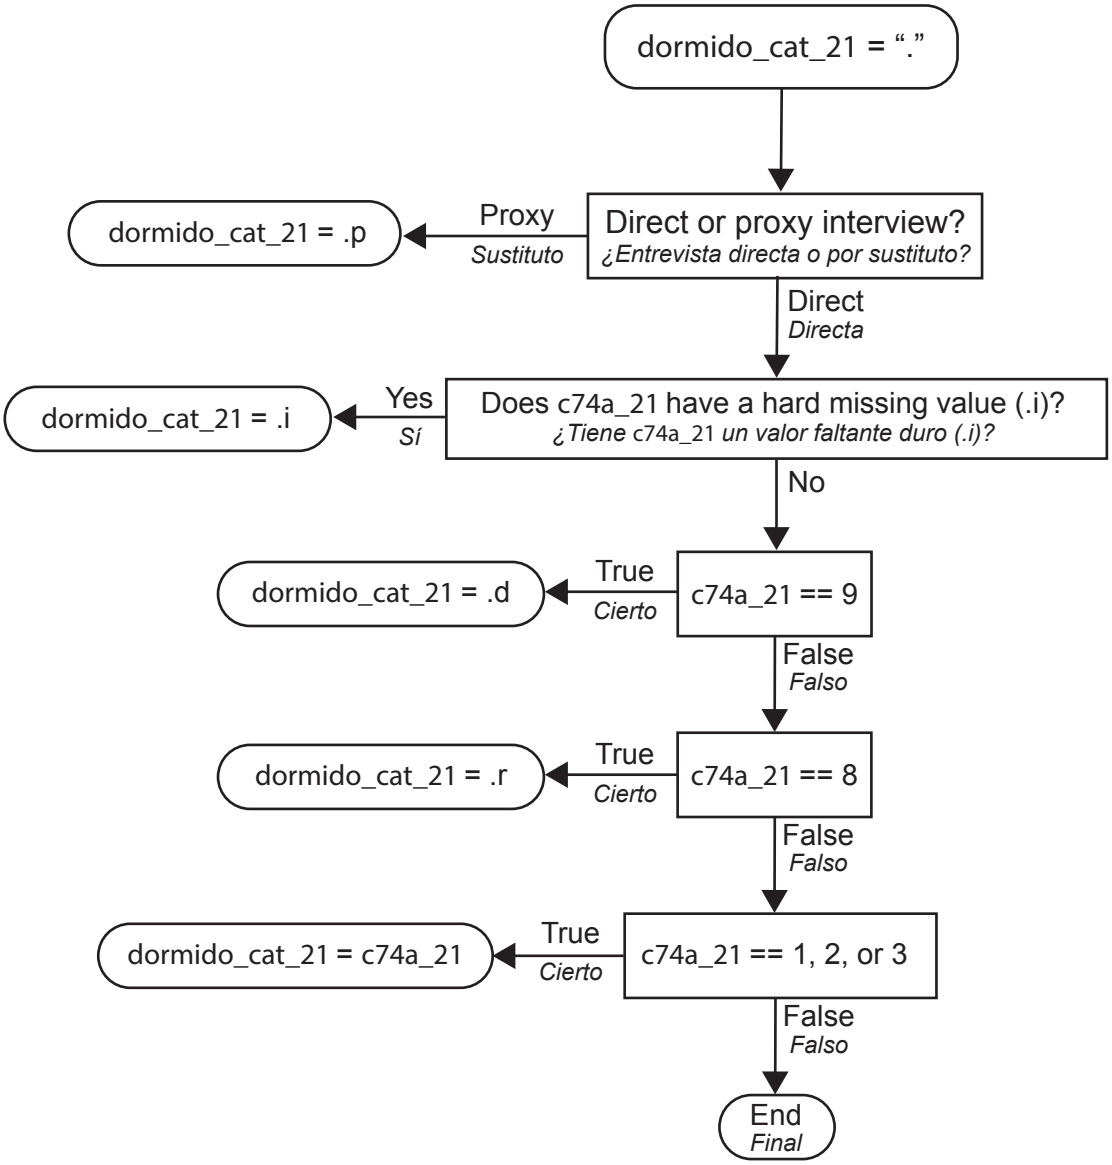
65. Construction of variable indicating if respondent has trouble falling asleep (dormido_21) from raw data

*Construcción de variable que indica si el individuo tiene dificultad para quedarse dormido (*dormido_21*) a partir de variables brutas*



66. Construction of variable indicating if respondent has trouble falling asleep (dormido_cat_21) from raw data

*Construcción de variable que indica si el individuo tiene dificultad para quedarse dormido (*dormido_cat_21*) a partir de variables brutas*



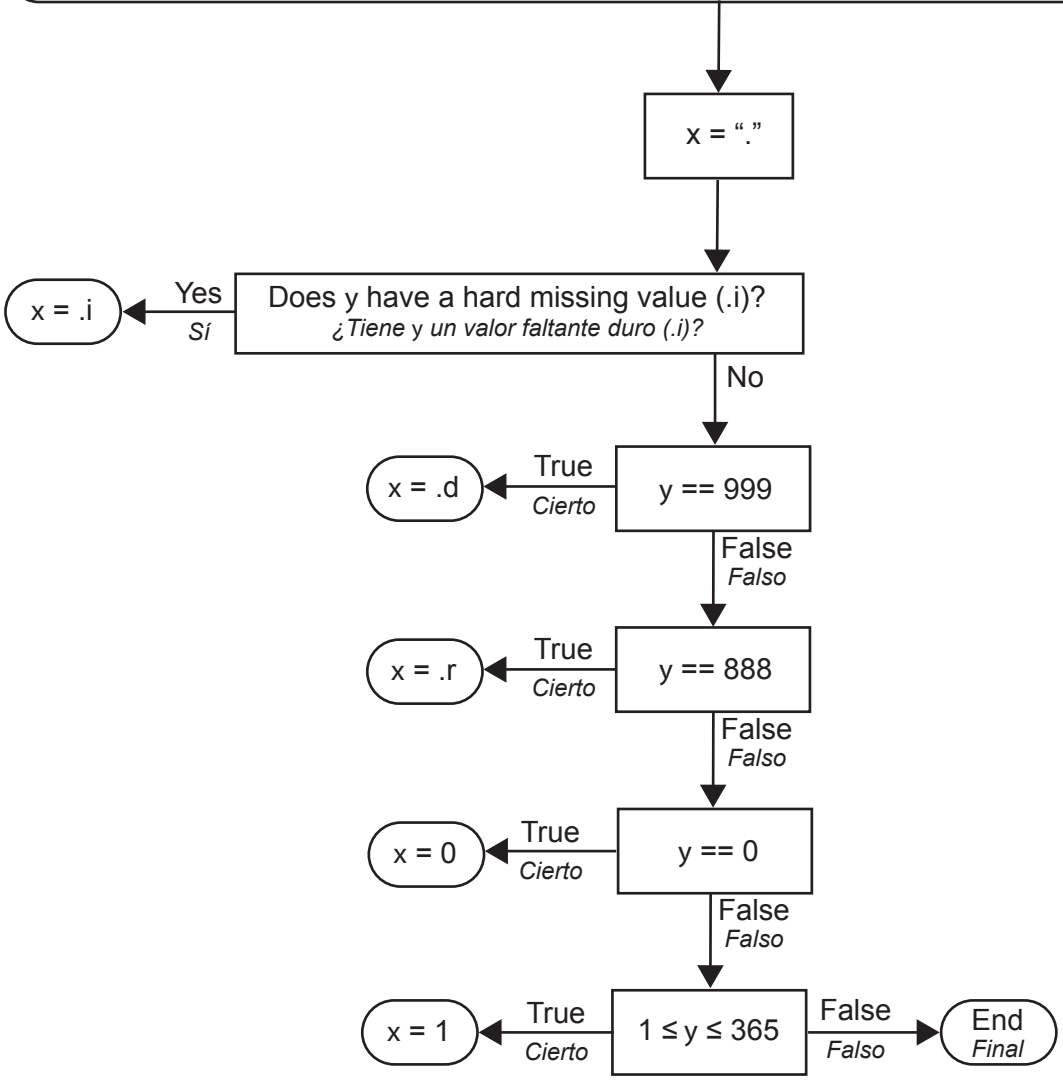
67 - 70. Construction of health services variables from raw data

Construcción de variables de servicios de salud a partir de variables brutas

N

Let x and y represent the variable being created & the raw variable used to create x, respectively.

Supongamos que x *e* y *representen la variable que se está creando y la variable bruta utilizada para crear* x*, respectivamente.*



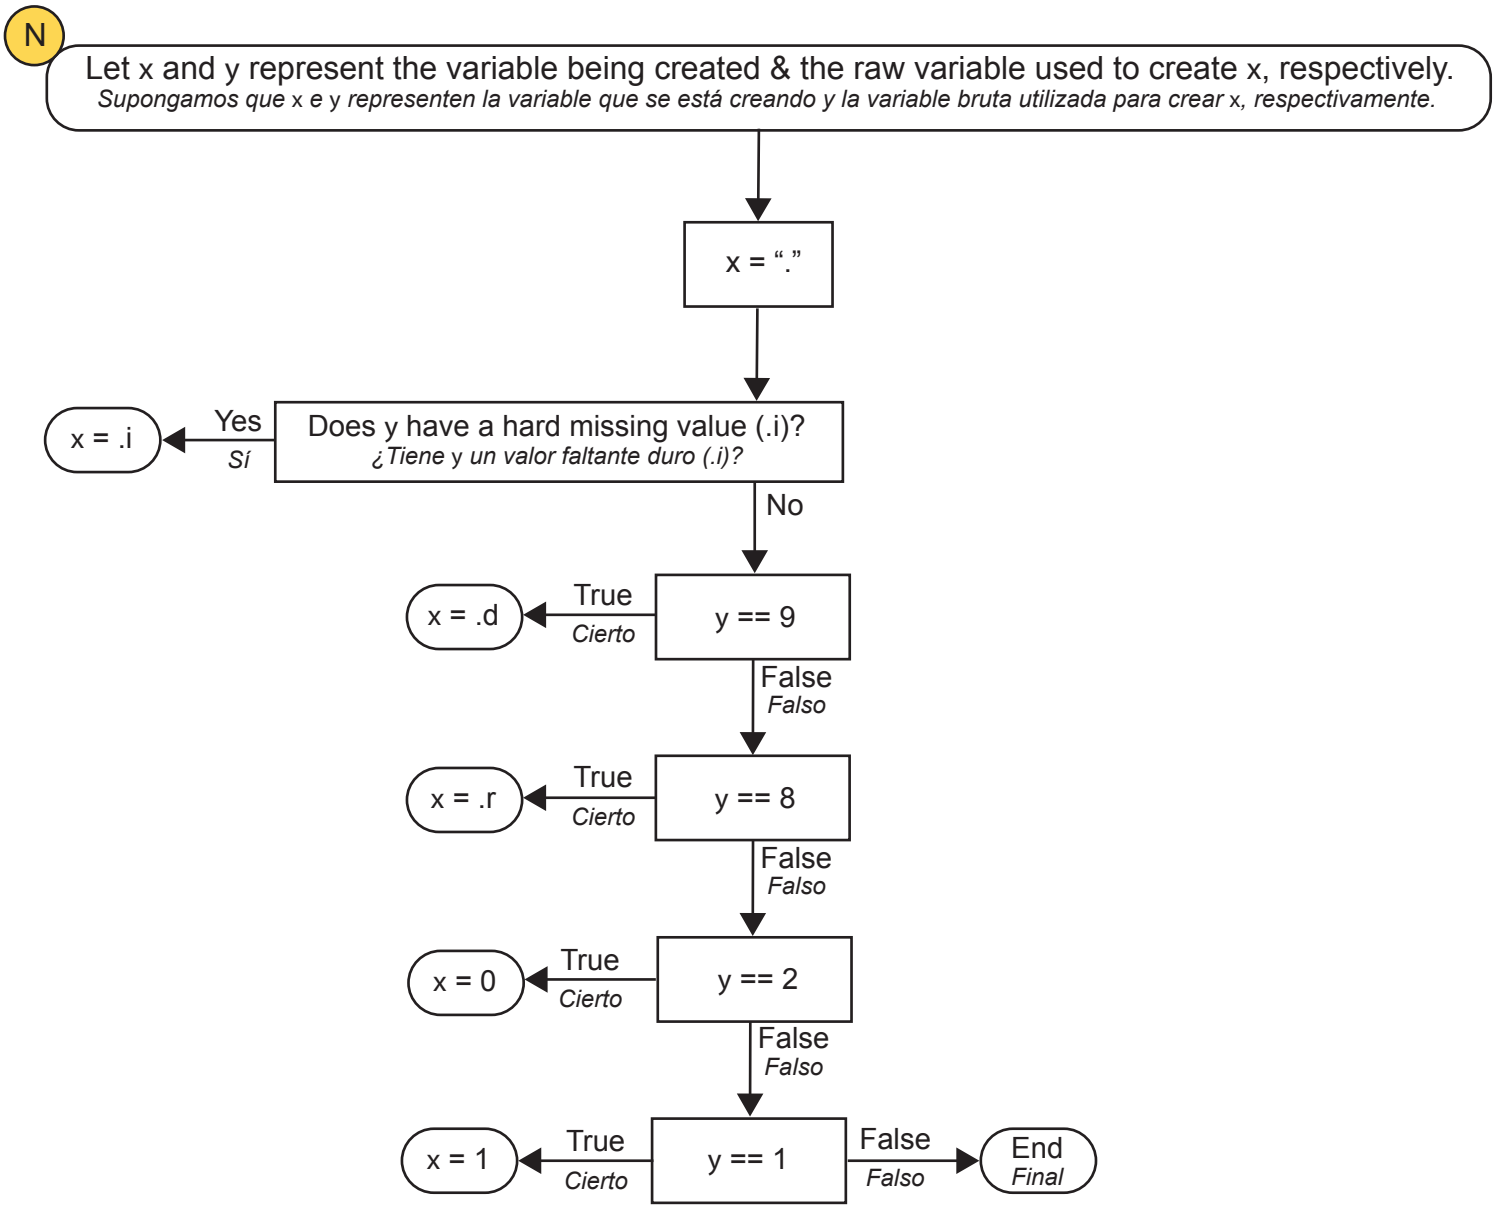
N

y is d4_21 and d8_1_21 - d8_2_21 for visita_dental_21, circa_ambu_21, visita_medica_21, and hospitalizacion_21, respectively.

y es d4_21 *y* d8_1_21 - d8_2_21 *para* visita_dental_21, circa_ambu_21, visita_medica_21, *y* hospitalizacion_21, *respectivamente.*

71 - 76. Construction of variables indicating whether each subject is covered by various types of health insurance

Construcción de variables que indican si cada sujeto está cubierto por varios tipos de seguro de salud



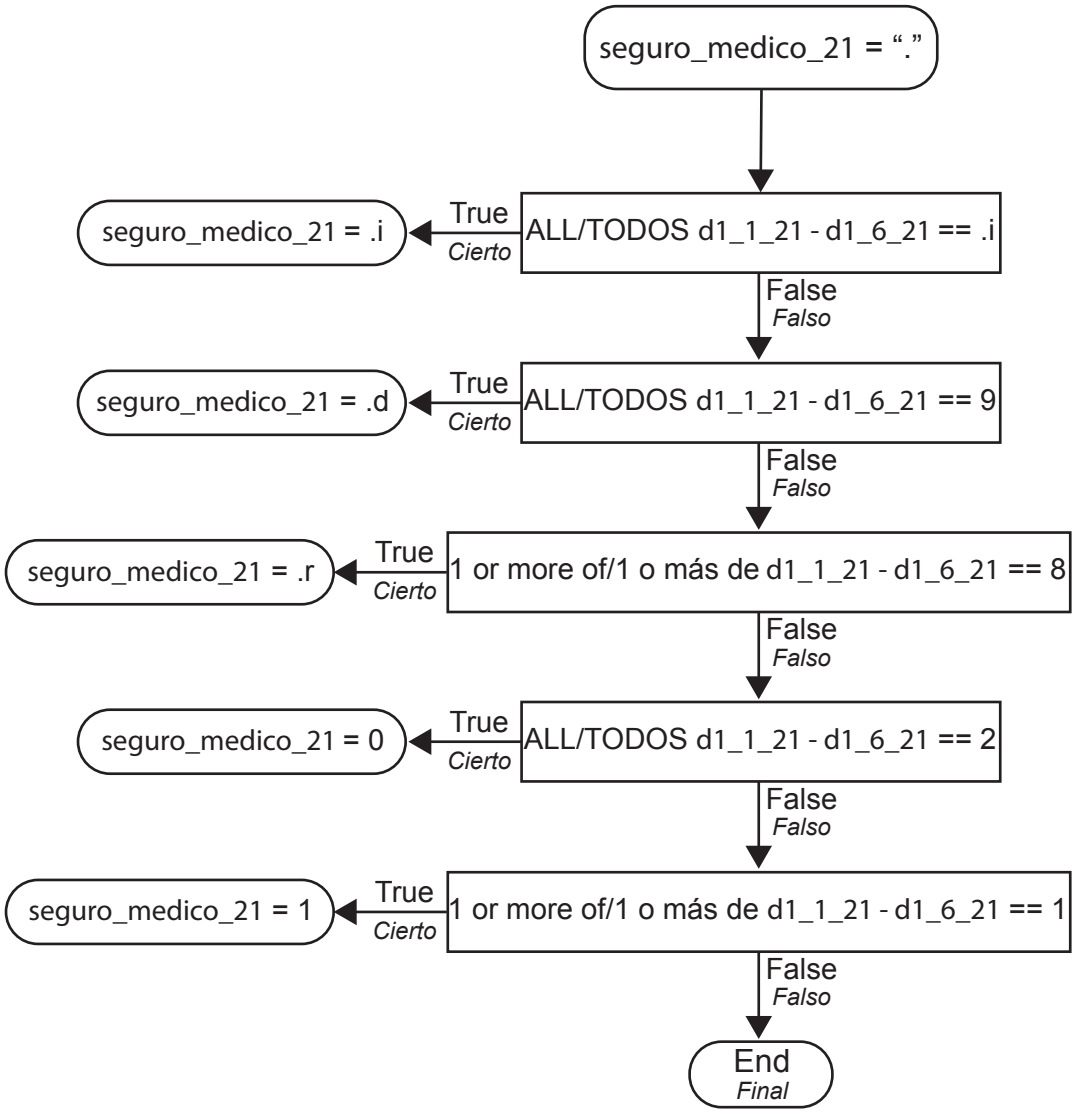
N

y is d1_1_21 - d1_6_21 for imss_21, issste_21, seg_pop_21, pem_def_mar_21, seguro_privado_21 and otro_seguro_21, respectively.

y es d1_1_21 - d1_6_21 *para* imss_21, issste_21, seg_pop_21, pem_def_mar_21, seguro_privado_21 *y* otro_seguro_21, *respectivamente.*

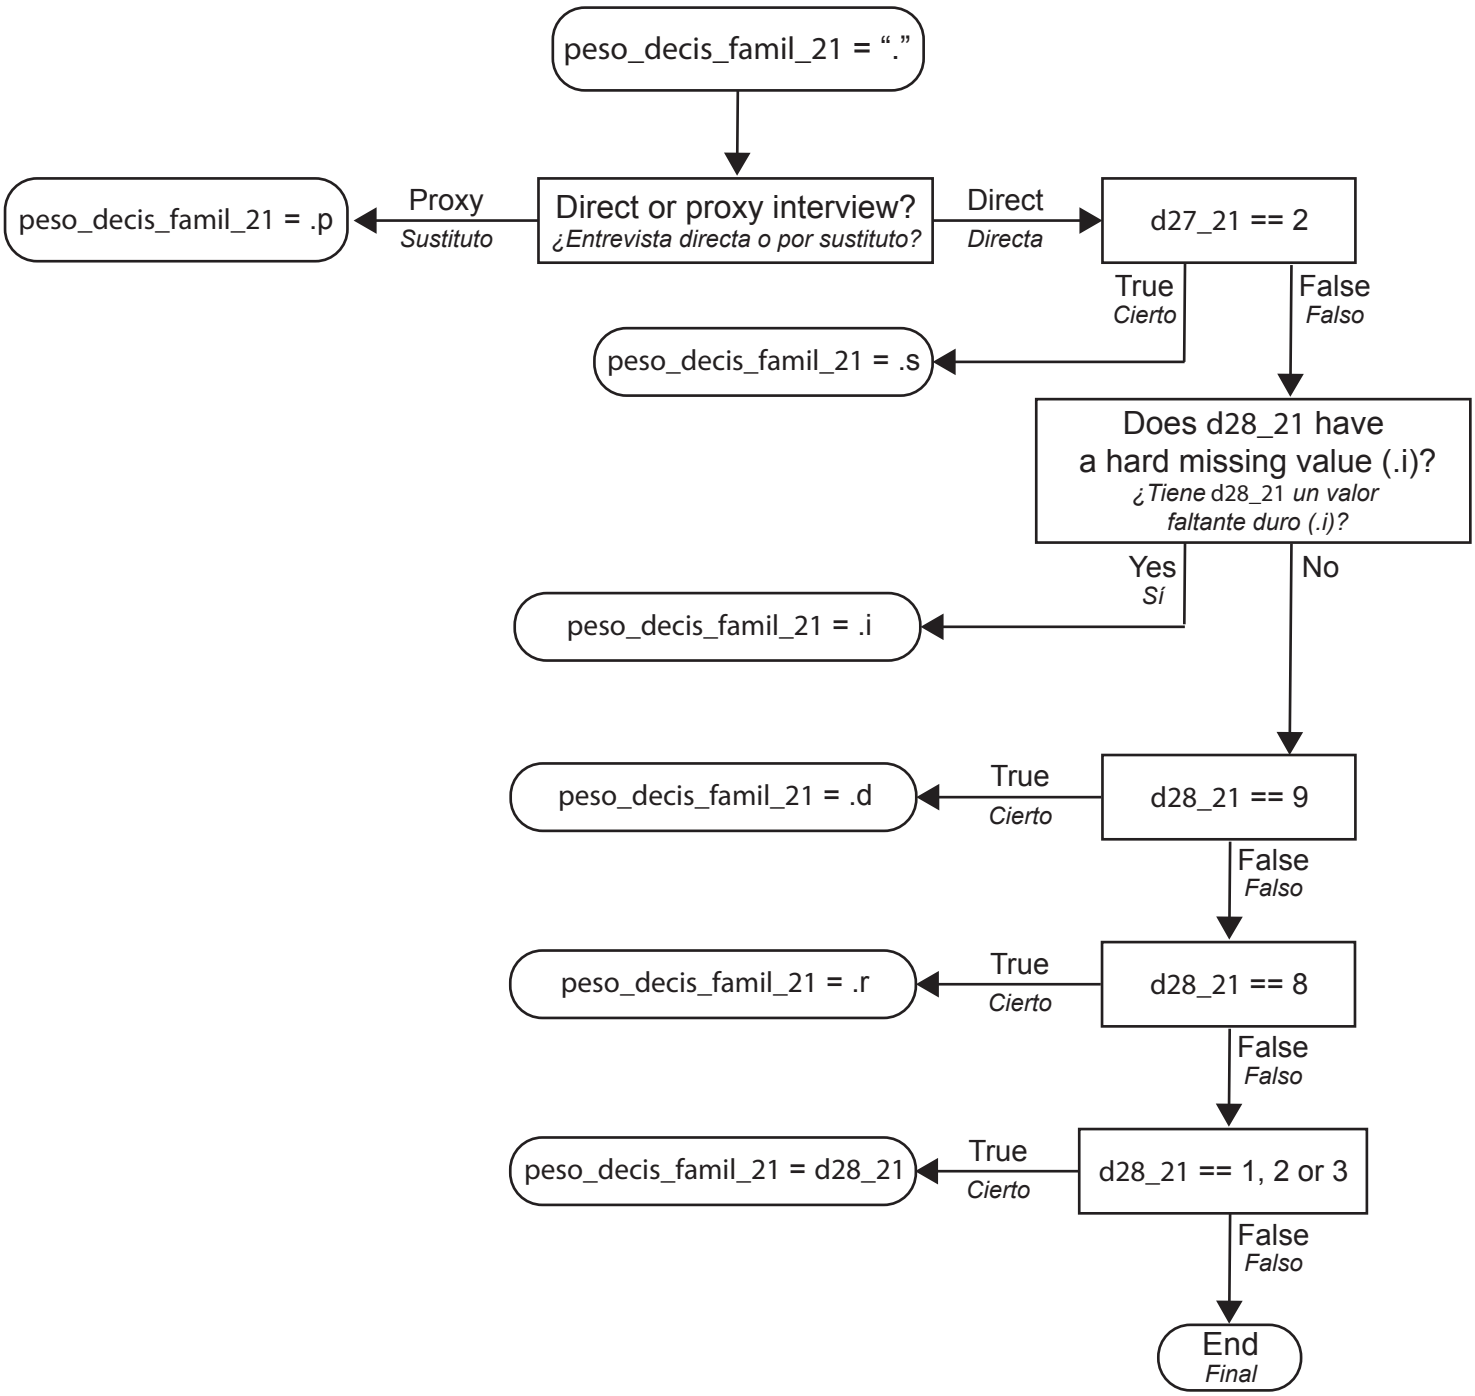
77. Construction of seguro_medico_21 from raw data

Construcción de seguro_medico_21 *a partir de variables brutas*



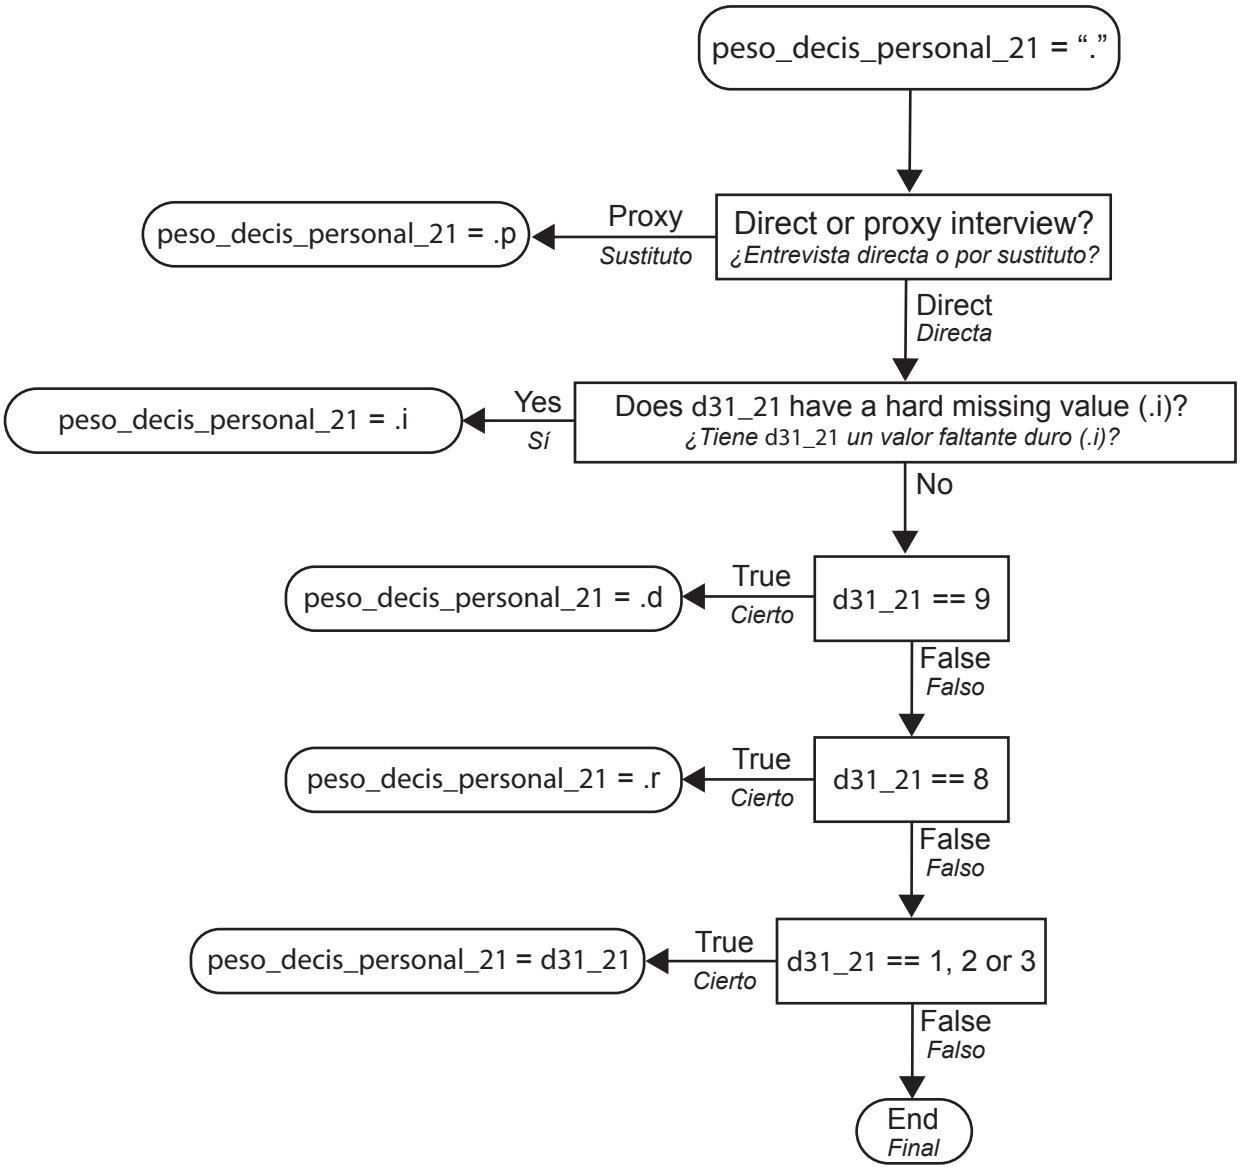
78. Construction of variable indicating whom respondent perceives as having more weight in family decisions; themselves, their spouse, or about equal weight between the two (peso_decis_famil_21)

*Construcción de variables que indiquen quién percibe el encuestado como que tiene más peso en las decisiones familiares; ellos mismos, su cónyuge, o aproximadamente el mismo peso entre los dos (*peso_decis_famil_21)



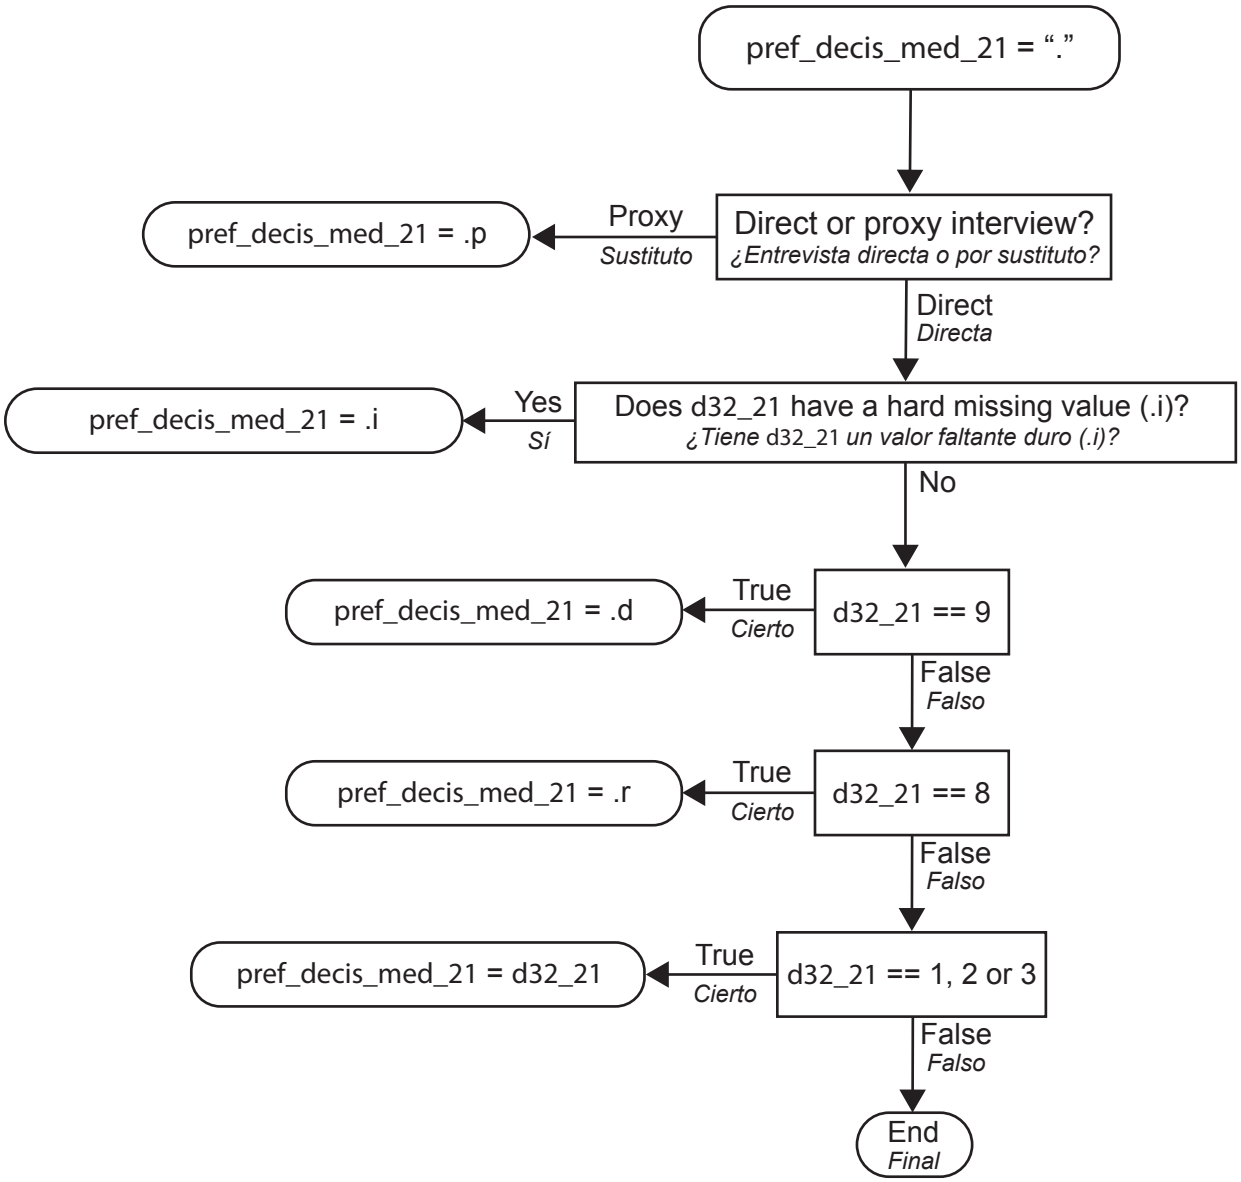
79. Construction of variable indicating how much weight respondent believes that they have in making personal decisions (peso_decis_personal_21) from raw data

*Construcción de variable que indica cuánto peso cree el encuestado que tiene al tomar decisiones personales (*peso_decis_personal_21*) a partir de variables brutas*



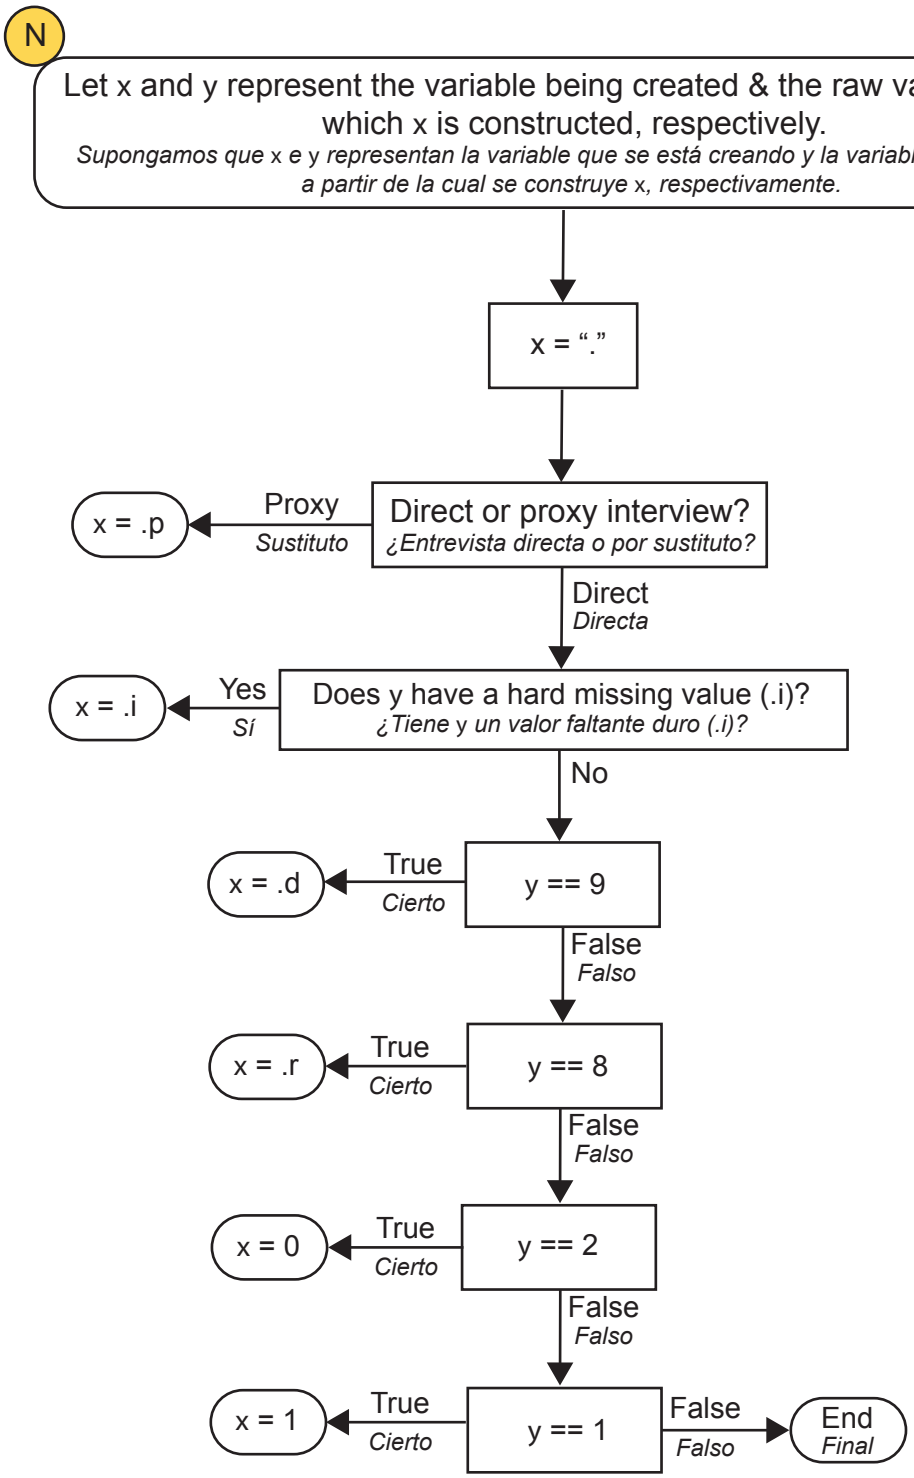
80. Construction of variable indicating respondents' preference regarding making medical decisions (pref_decis_med_21) from raw data

*Construcción de una variable que indica la preferencia de los encuestados con respecto a la toma de decisiones médicas (*pref_decis_med_21*) a partir de variables brutas*



81 - 92. Construction of variables indicating how respondent uses their time in different daily activities from raw data

Construcción de variables que indican cómo el encuestado usa su tiempo en diferentes actividades diarias a partir de variables brutas



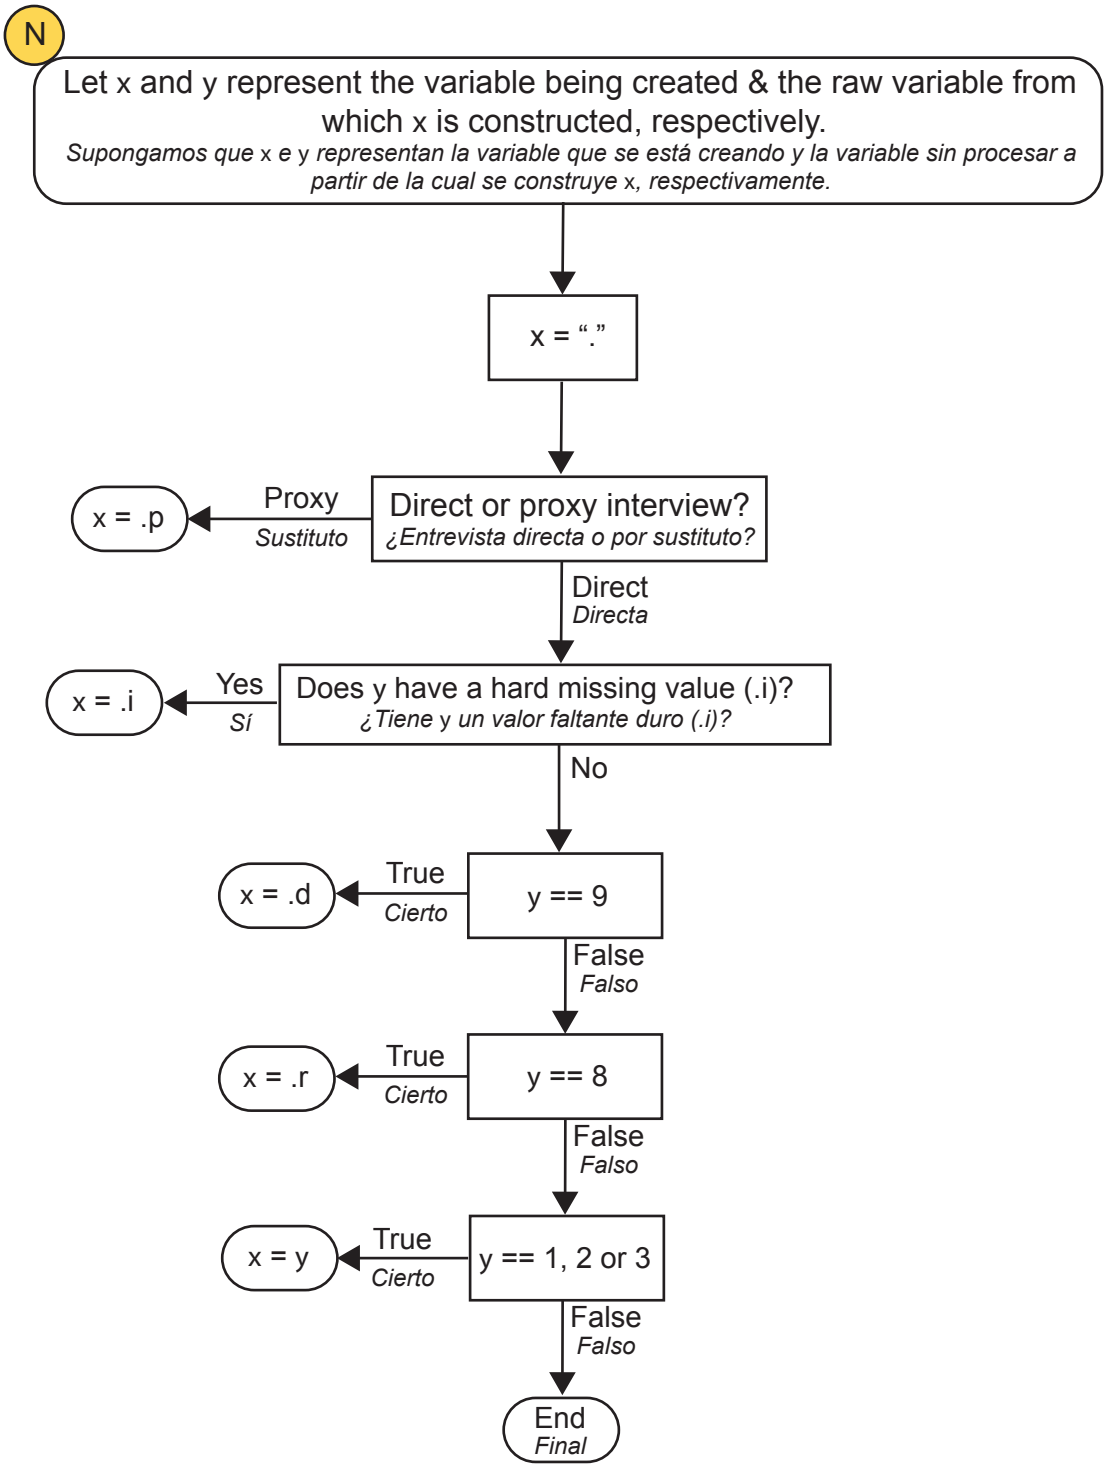
N

y is part (1) of each question D.34a_21 - D.34m_21 for cuida_adulto_21, cuida_menor_21, voluntario_21, asiste_cursos_21, asiste_club_21, lee_21, cruci_rompe_21, juegos_mesa_21, comu_telef_comp_21, act_mant_21, ve_tv_21, and cose_21, respectively.

y es parte (1) de cada pregunta D.34a_21 - D.34m_21 para cuida_adulto_21, cuida_menor_21, voluntario_21, asiste_cursos_21, asiste_club_21, lee_21, cruci_rompe_21, juegos_mesa_21, comu_telef_comp_21, act_mant_21, ve_tv_21 y cose_21, *respectivamente*.

93 - 97. Construction of life satisfaction variables from raw data

Construcción de variables de satisfacción con la vida a partir de variables brutas



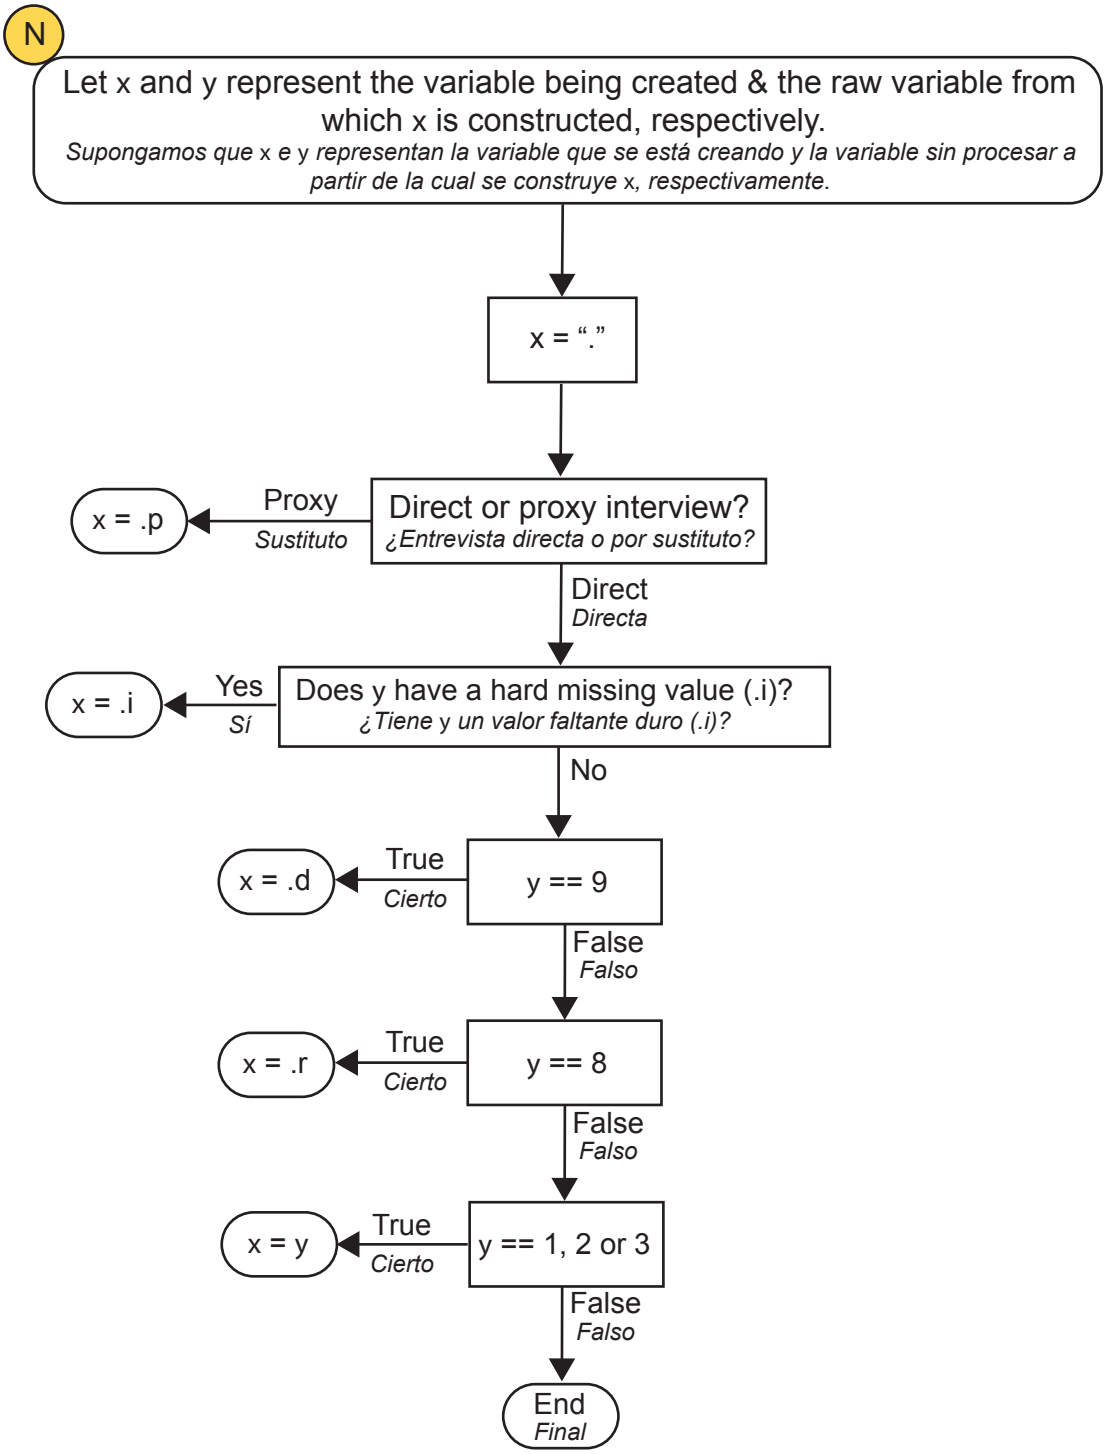
N

y is d33a_21 - d33e_21 for vida_ideal_21, cond_excel_21, satisfecho_21, cosas_imp_21 and no_cambio_21, respectively.

y es d33a_21 - d33e_21 *para* vida_ideal_21, cond_excel_21, satisfecho_21, cosas_imp_21 *y* no_cambio_21, *respectivamente.*

98 - 100. Construction of variables on the loneliness scale from raw data

Construcción de variables sobre sentimientos de la escala de soledad a partir de variables brutas



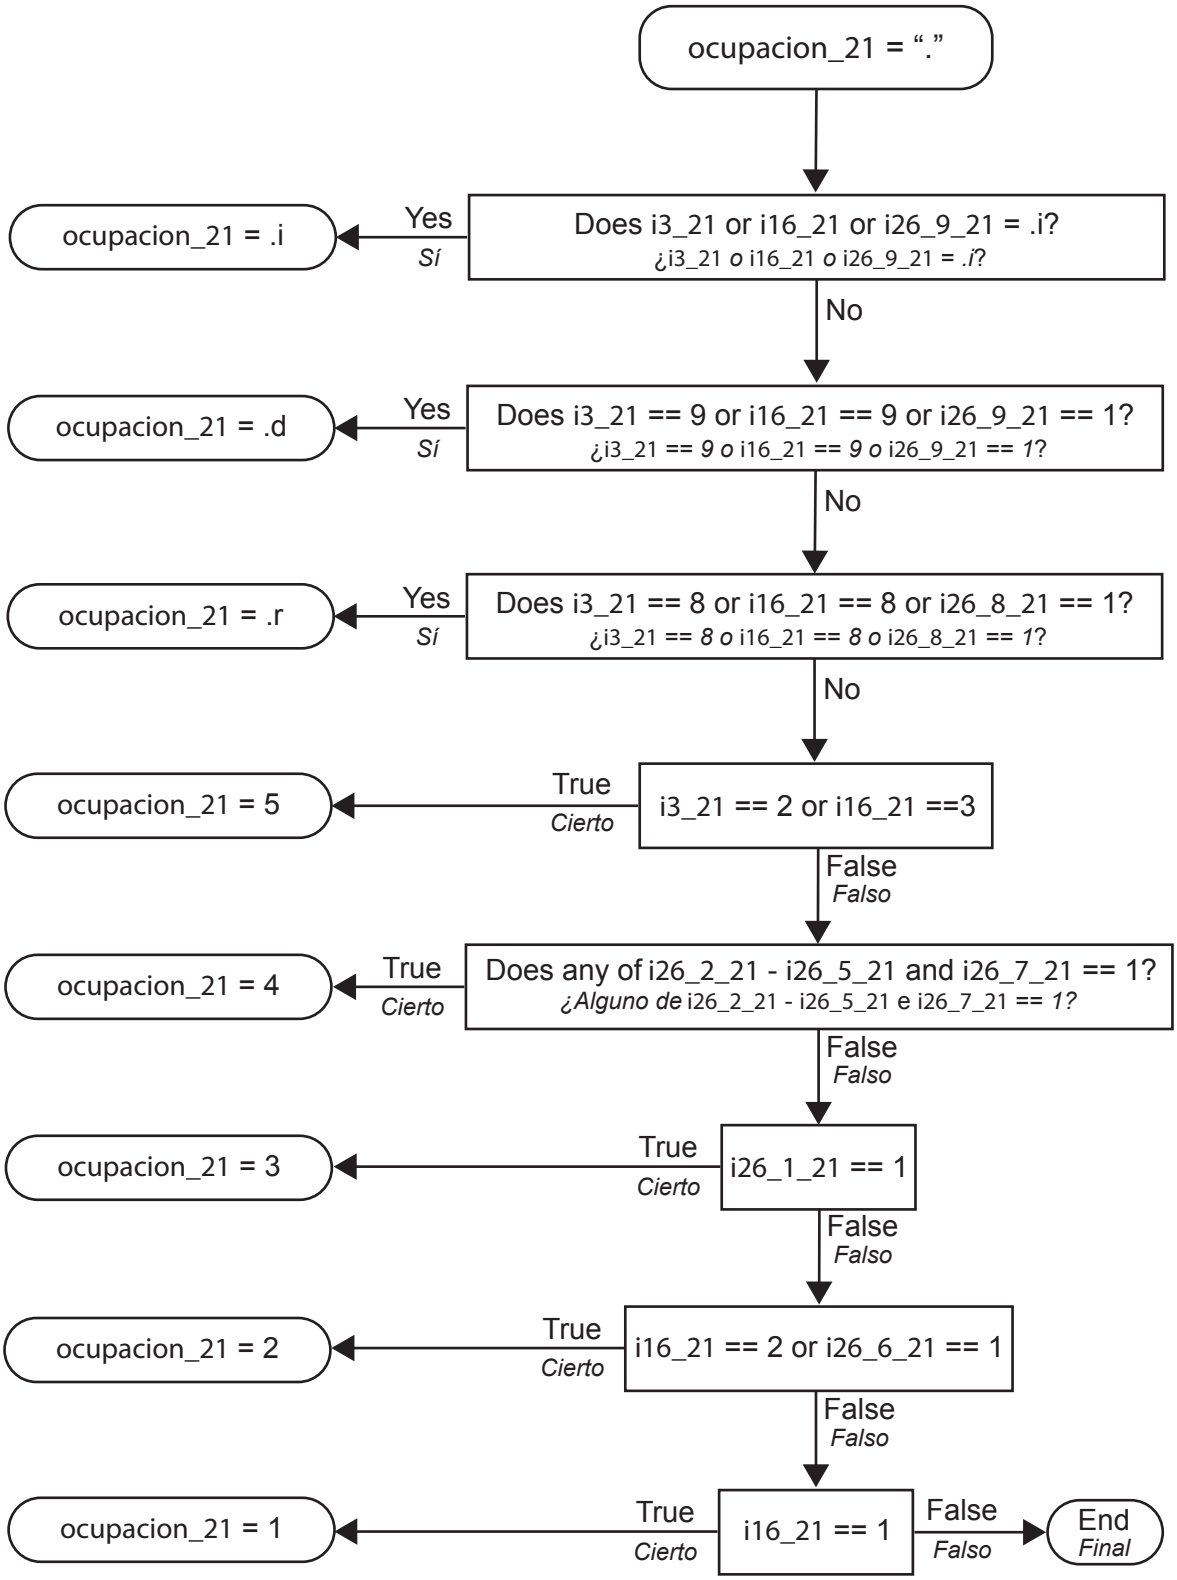
N

y is d35a_21 - d35c_21 for falta_compa_21 (lacked companionship), ignorado_21 (felt left out), and aislado_21 (felt isolated), respectively.

y es d35a_21 - d35c_21 *para* falta_compa_21 (le falta compañía), ignorado_21 (se siente ignorado), *y* aislado_21 (se siente aislado), *respectivamente.*

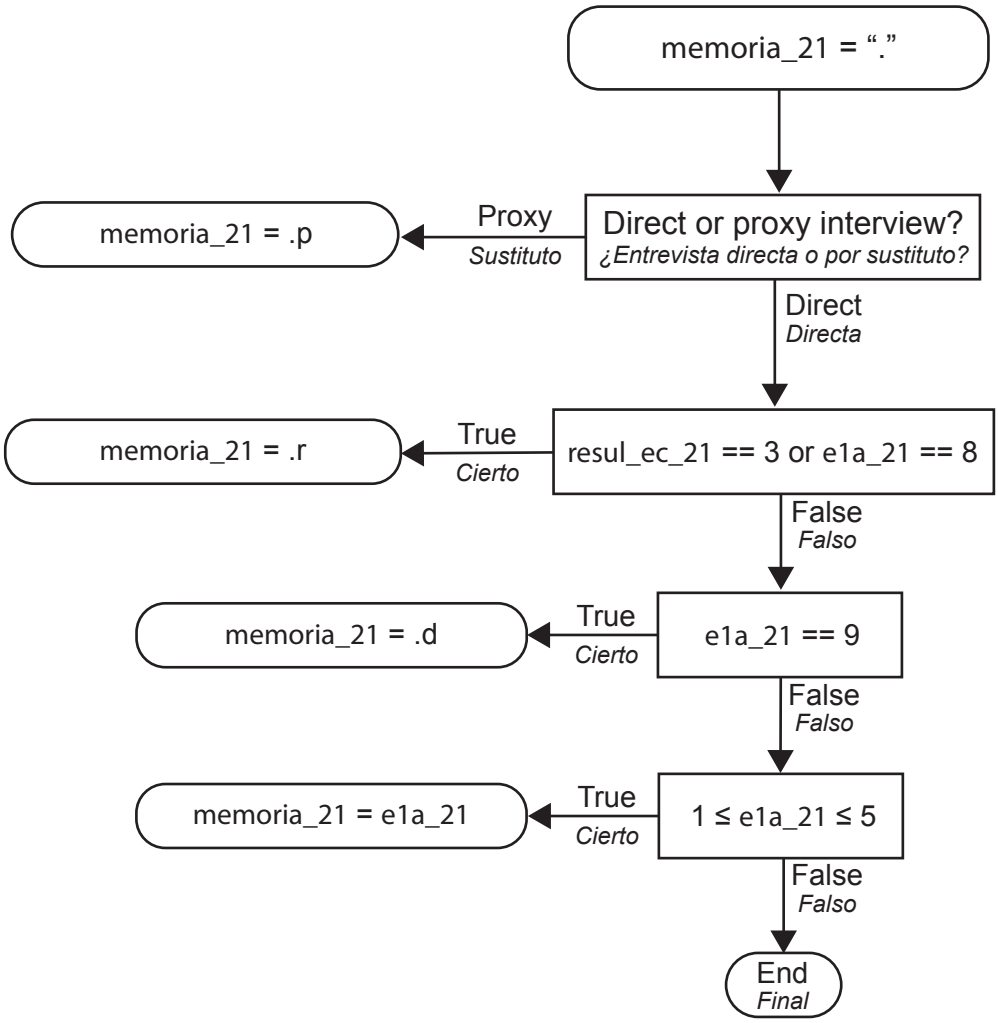
101. Construction of variable indicating (ocupacion_21) from raw data

*Construcción de variable que indica la actividad laboral (*ocupacion_21*) a partir de variables brutas*



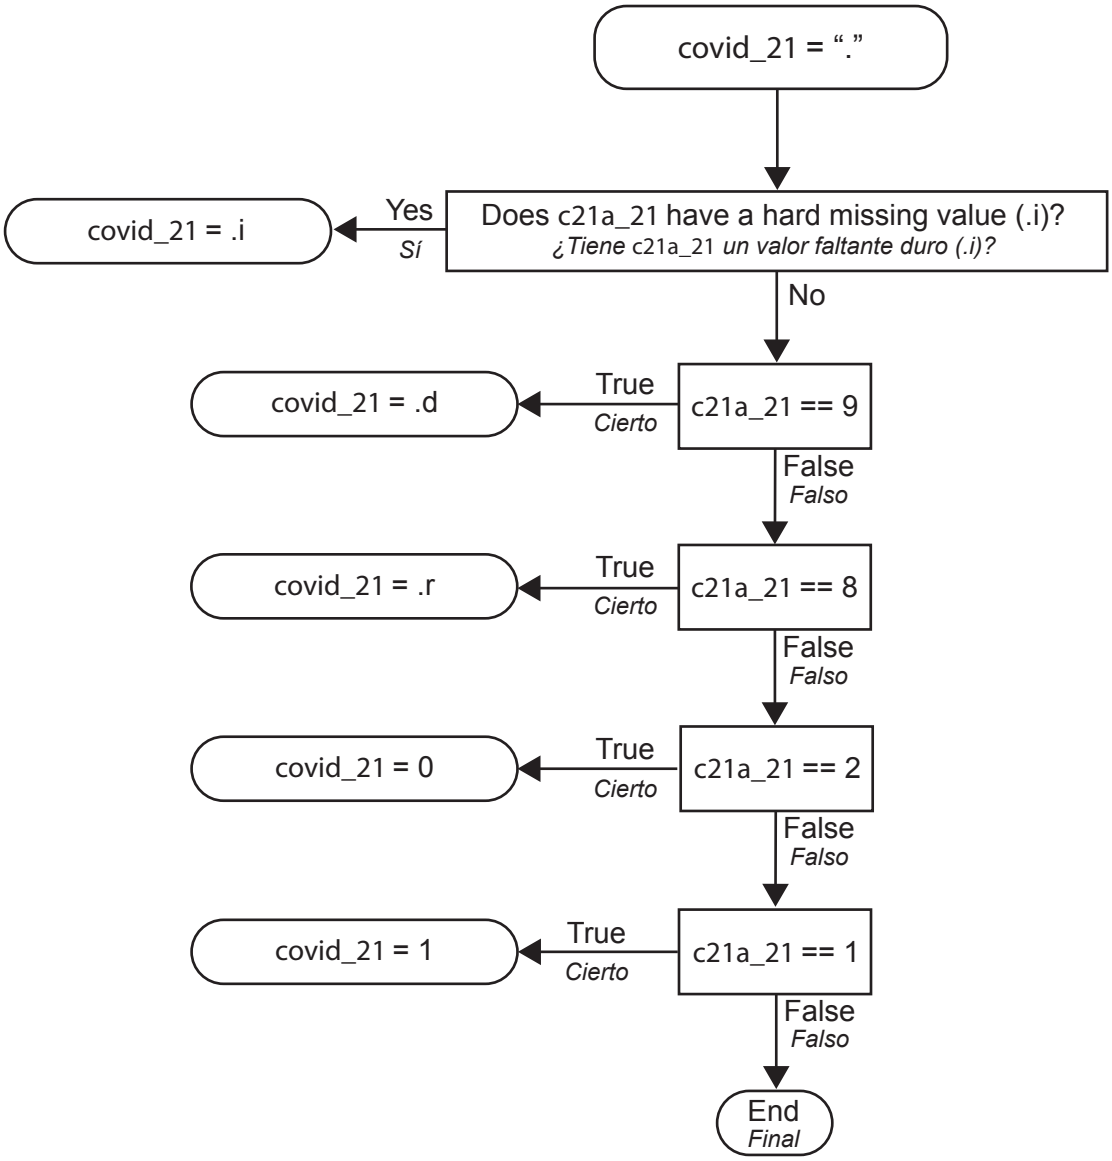
102. Construction of variable indicating respondents self-reported quality of memory (memoria_21) from raw data

*Construcción de variables que indican la calidad de memoria autoinformada de los encuestados (*memoria_21*) a partir de variables brutas*



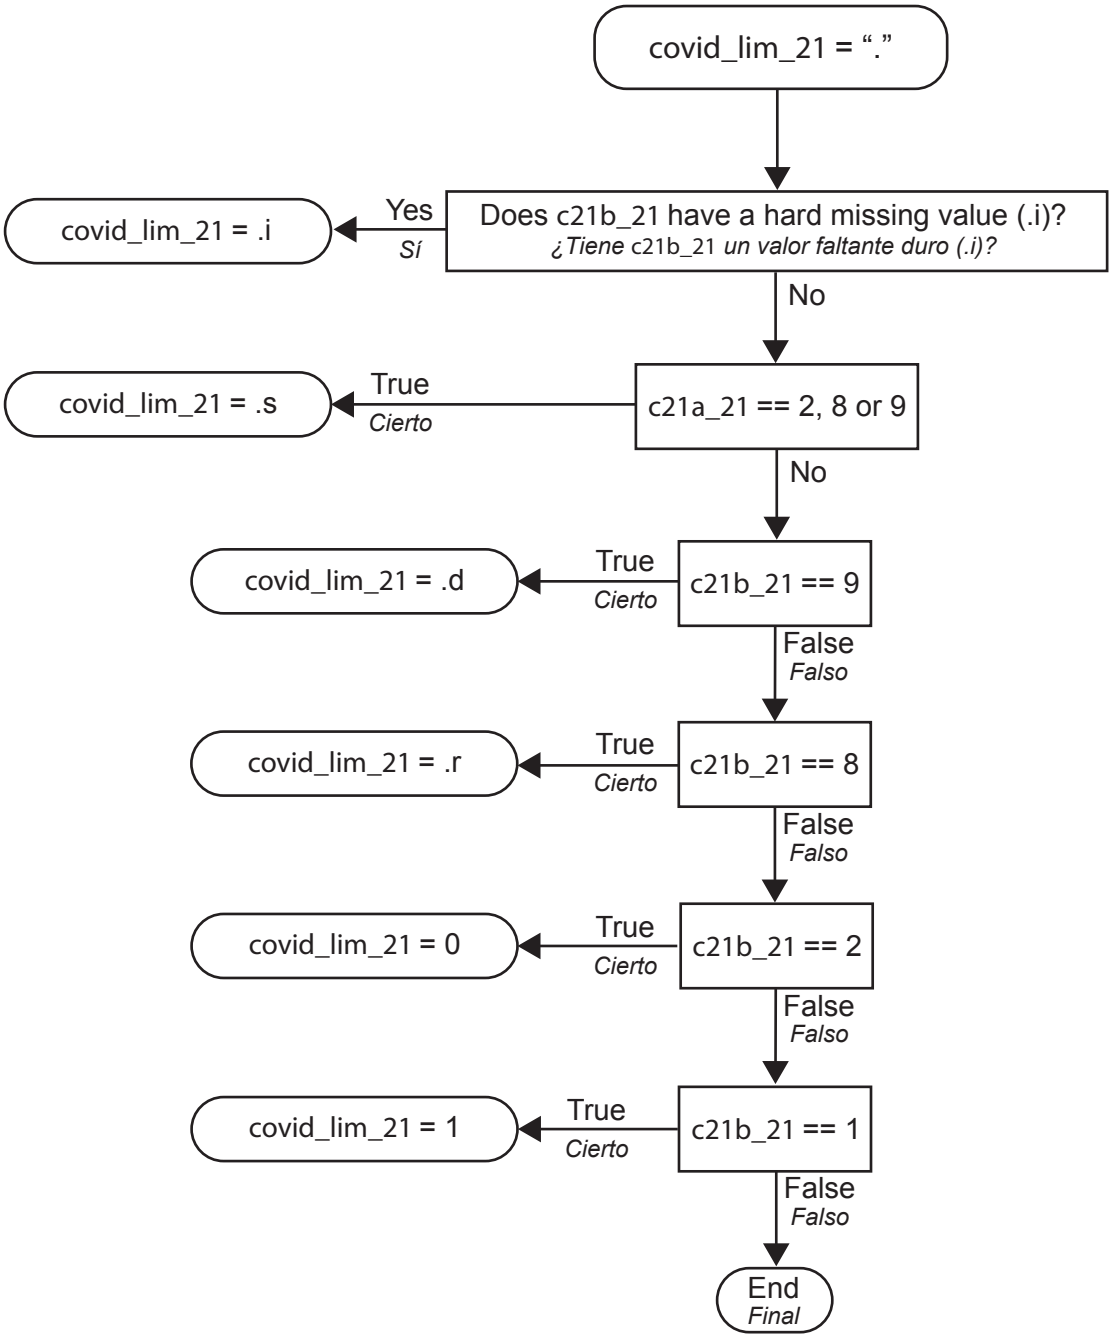
103. Construction of variable indicating if respondents have been told they have had COVID-19 (covid_21) from raw data

*Construcción de variables que indican si le han dicho al encuestado si ha tenido COVID-19 (*covid_21*) a partir de variables brutas*



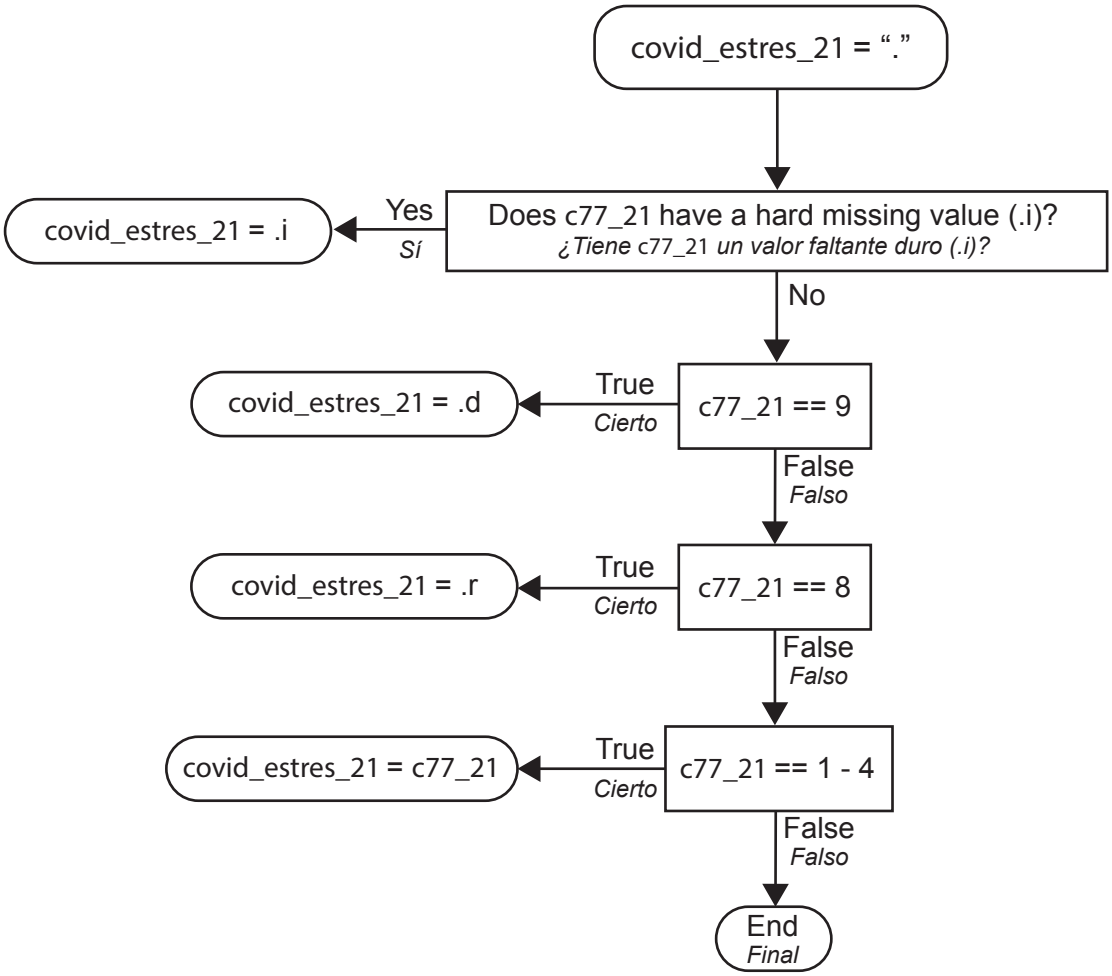
104. Construction of variable indicating if respondents have limitation due to COVID-19 (covid_lim_21) from raw data

*Construcción de variables que indican si el encuestado tiene limitaciones debido a COVID-19 (*covid_lim_21*) a partir de variables brutas*



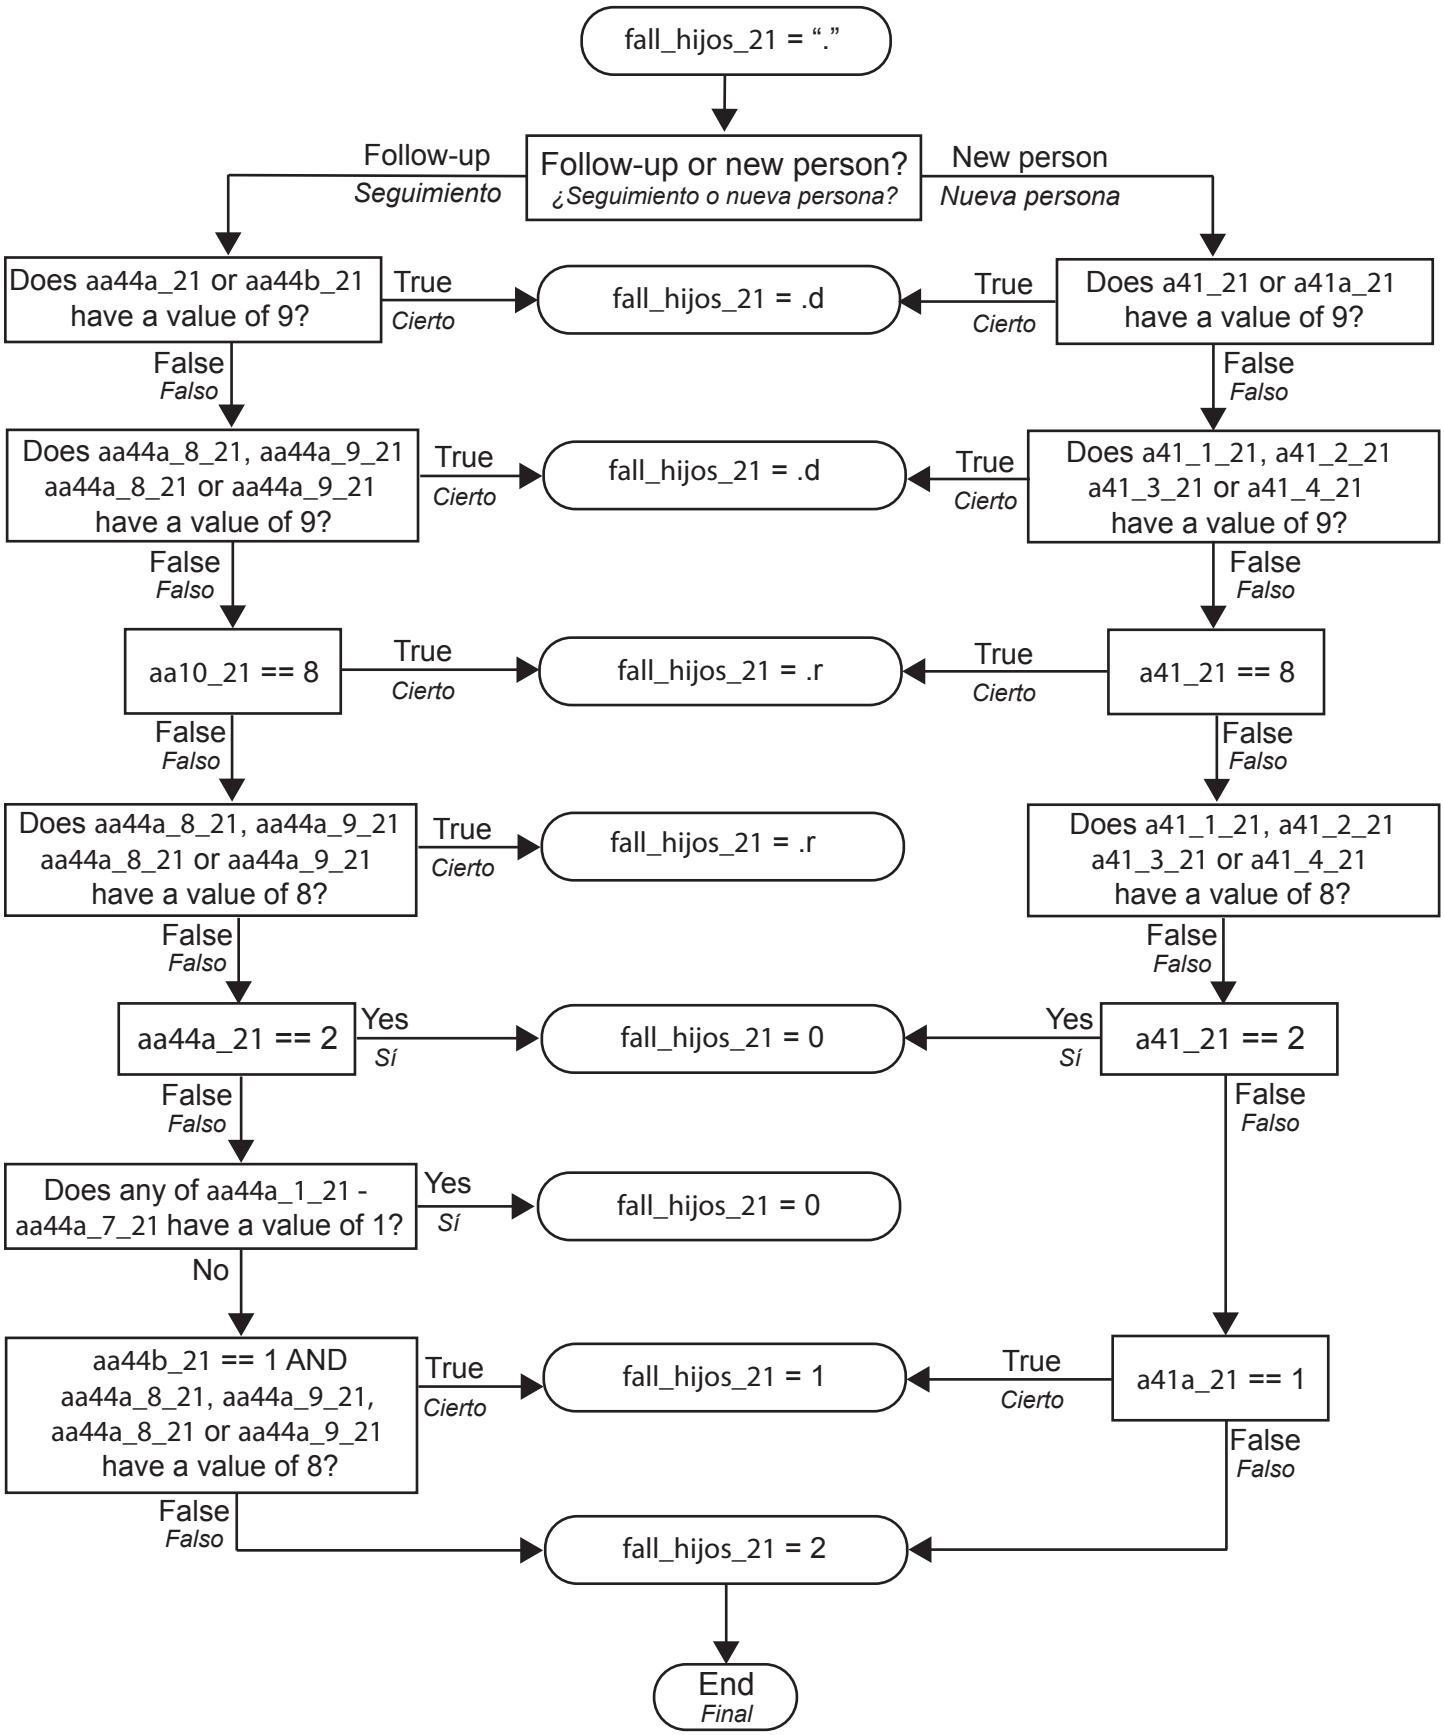
105. Construction of variable indicating the respondents level of stress related to the COVID-19 pandemic (covid_estres_21) from raw data

*Construcción de variables que indican si el nivel de estres del encuestado con relación a la pandemia de COVID-19 (*covid_estres_21*) a partir de variables brutas*



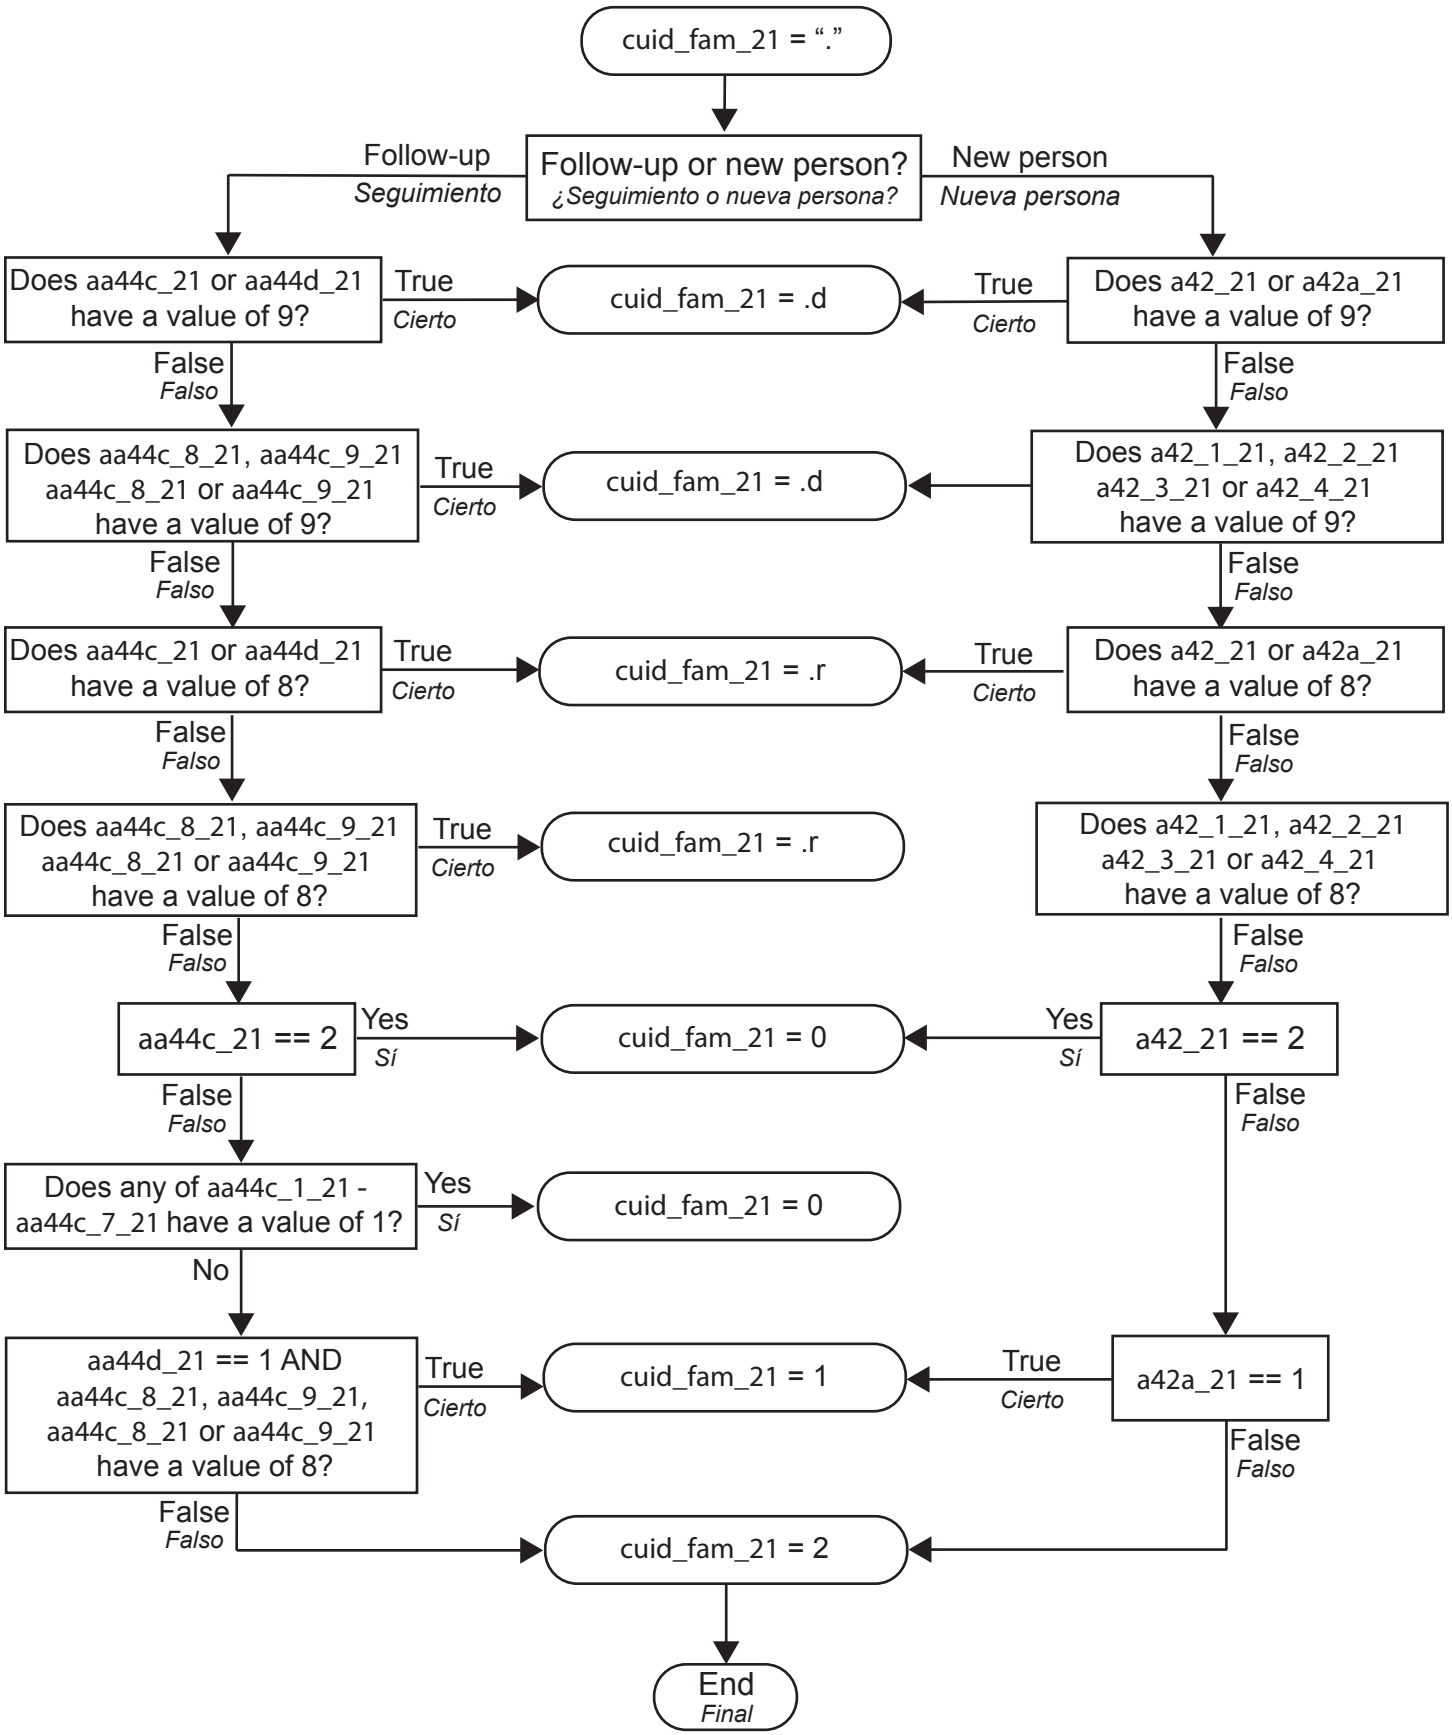
106. Construction of variable indicating if any of the respondent's children died between 2018 and 2021 due to COVID-19 (fall_hijos_21) from raw data

Construcción de variable que indica si alguno de los hijos del encuestado falleció entre 2018 y 2021 debido a COVID-19 (fall_hijos_21) *a partir de variables brutas*



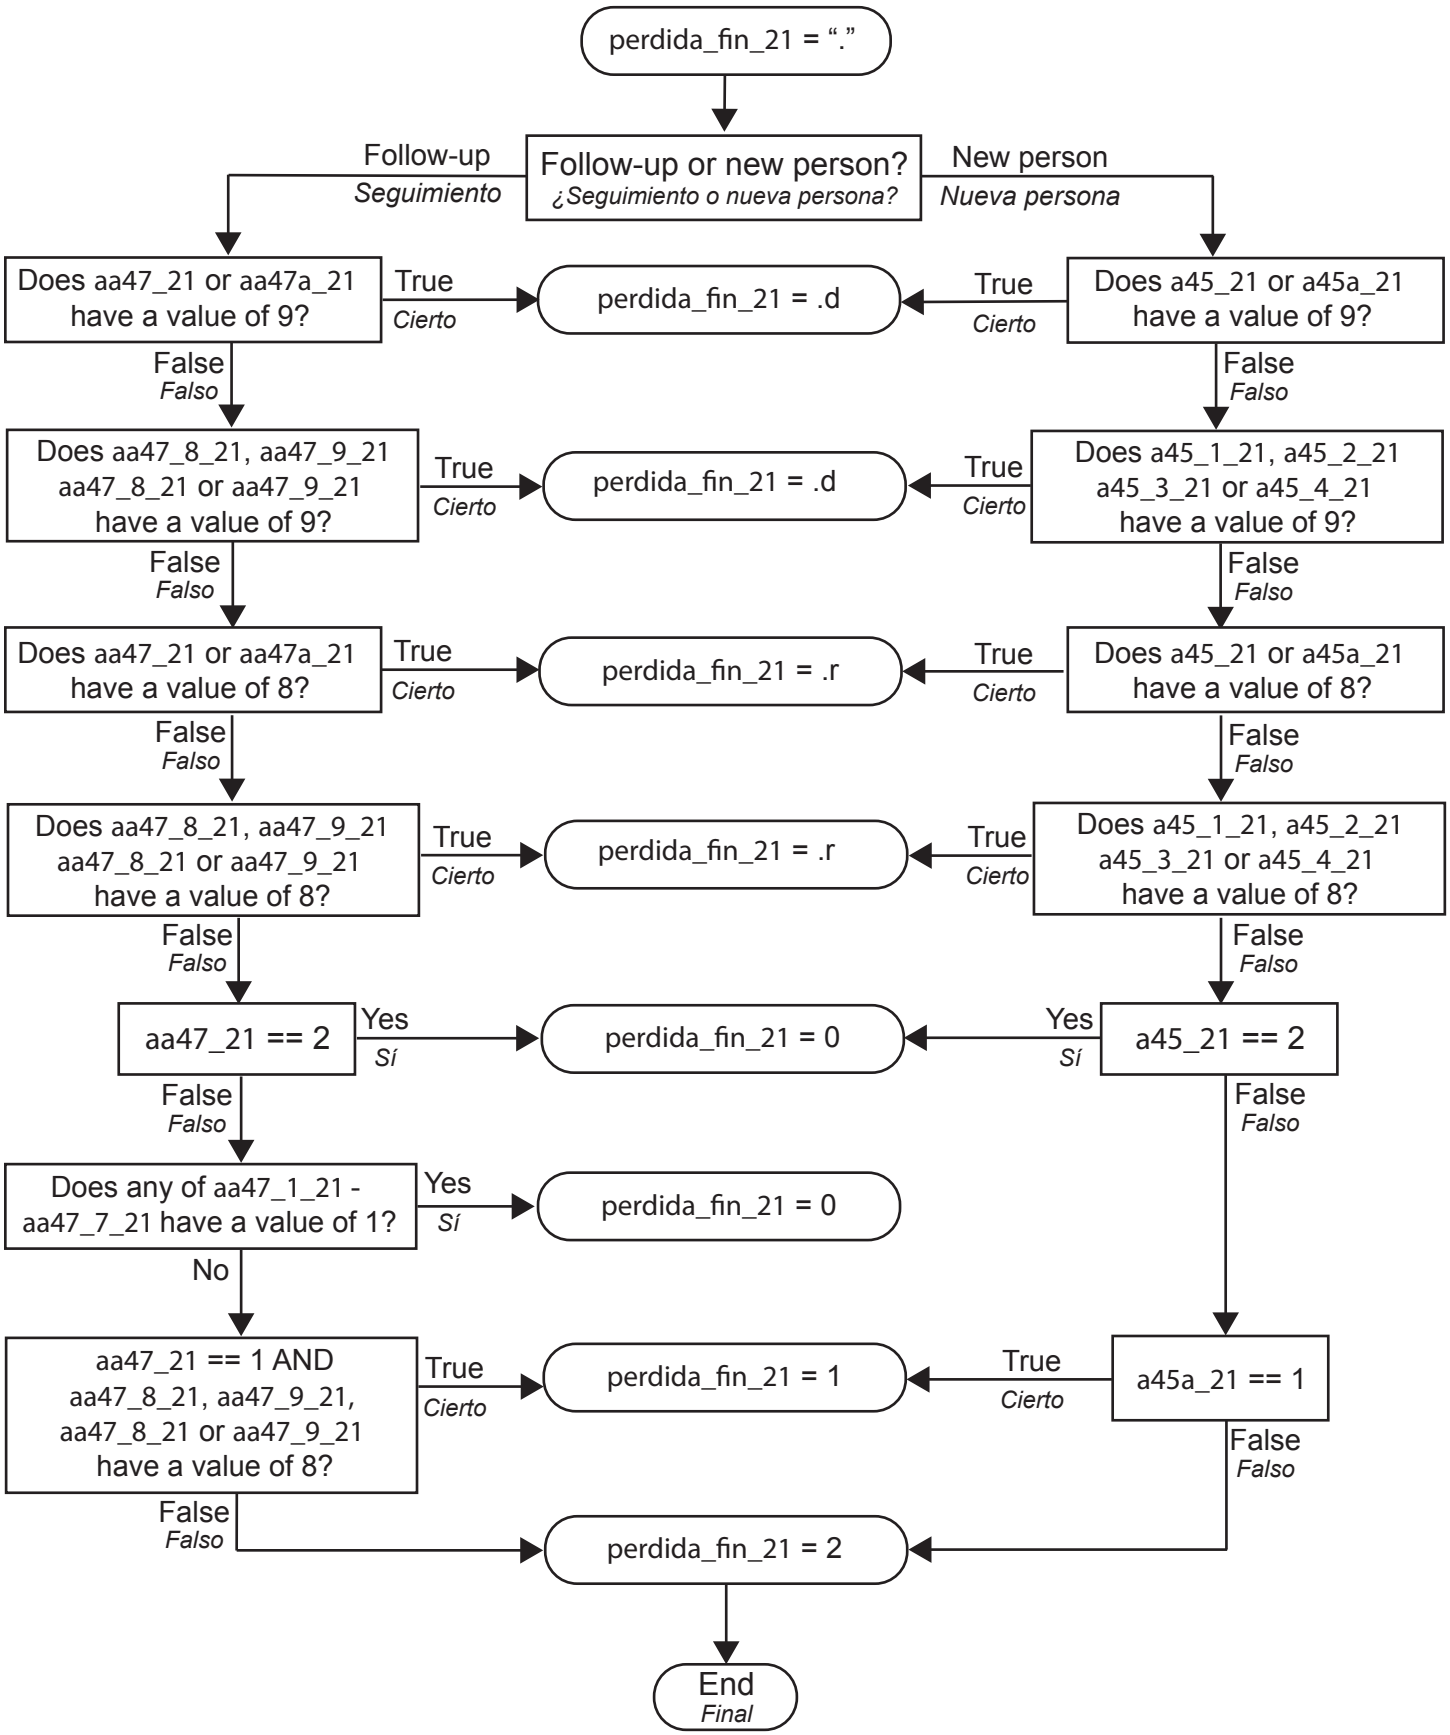
107. Construction of variable indicating if the respondent took care of a family member between 2018 and 2021 due to COVID-19 (cuida_fam_21) from raw data

Construcción de variable que indica si el encuestado cuidó a algun familiar entre 2018 y 2021 debido a COVID-19 (cuida_fam_21) *a partir de variables brutas*



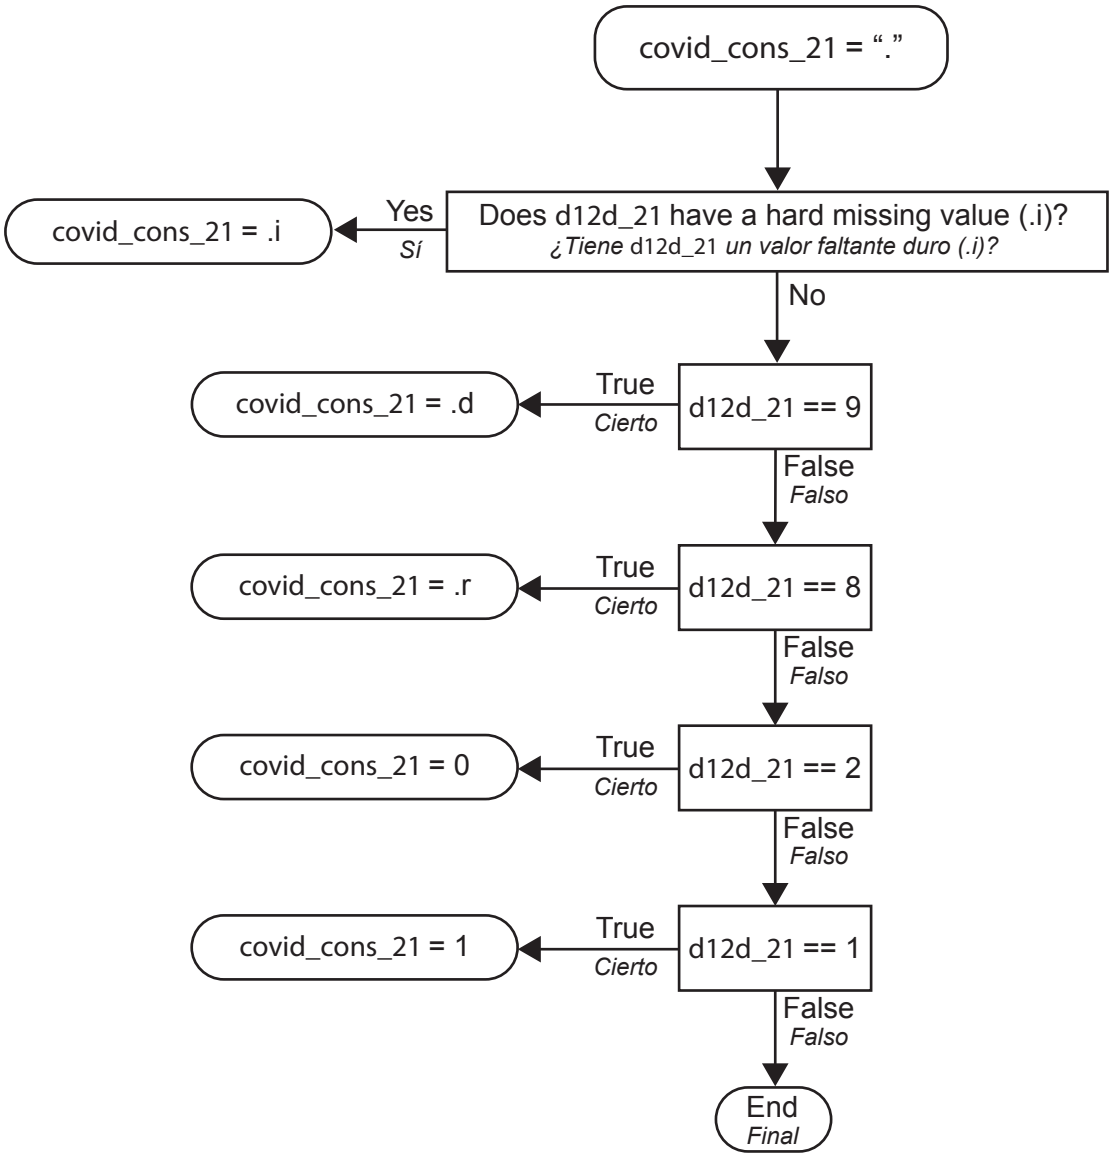
108. Construction of variable indicating if the respondent had a financial loss between 2018 and 2021 due to COVID-19 (perdida_fin_21) from raw data

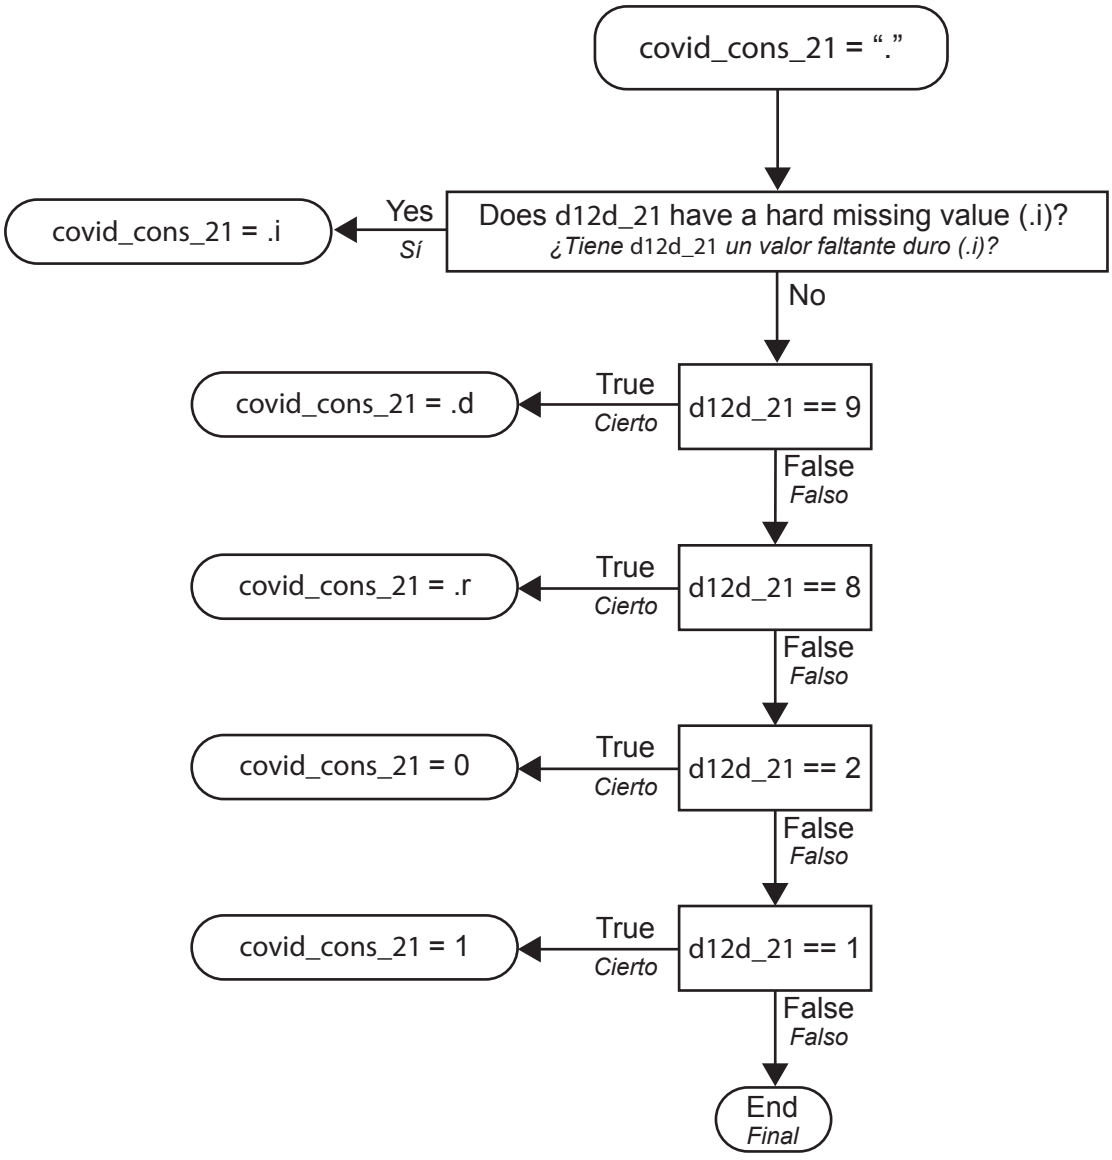
Construcción de variable que indica si el encuestado sufrió alguna perdida financiera entre 2018 y 2021 debido a COVID-19 (perdida_fin_21) *a partir de variables brutas*



109. Construction of variable indicating if the respondent consulted a doctor or medical personnel because of COVID-19 (covid_cons_21) from raw data

Construcción de variable que indica si el encuestado consultó un doctor o personal medico debido a COVID-19 (covid_cons_21) *a partir de variables brutas*



110. Construction of variable indicating if the respondent was hospitalized because of COVID-19 (covid_cons_21) from raw data


Construcción de variable que indica si el encuestado fue hospitalizado debido a COVID-19 (covid_cons_21) *a partir de variables brutas*
